RRB–42

SYSTEM NAME:

Uncollectible Benefit Overpayment Accounts.

* * * * *

35. The following sections and paragraph in RRB–42 are revised to read as follows:

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who were overpaid in the benefits they received from the Railroad Retirement Board and whose overpayment amounts have been determined uncollectible after normal recovery efforts have been made. Benefits overpaid are further delineated in the following five categories.

—Individuals receiving the following types of annuities, payable under the Railroad Retirement Act: Railroad retirement, disability, supplemental, and survivor.

—Individuals receiving unemployment or sickness insurance benefits payable under the Railroad Unemployment Insurance Act.

—Individuals receiving benefits under section 701 of the Regional Rail Reorganization Act of 1973.

CATEGORIES OF RECORDS IN THE SYSTEM:

Name, address, Social Security number, Railroad Retirement claim number, type of benefit previously paid, amount of overpayment determined to be uncollectible, amount of interest and penalties assessed and collected, name and address of debt collection agency or Federal agency to which uncollectible account is referred for collection, date of such referral, amount collected, and name and address of consumer reporting agencies to which debt information is disclosed and date of such referral.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Section 7(b)(6) of the Railroad Retirement Act of 1974 (45 U.S.C. 231f(b)(6), sec. 12(1) of the Railroad Unemployment Insurance Act (45 U.S.C. 362(1); Pub. L. 97–92, Joint Resolution; Pub. L. 97–365 (Debt Collection Act of 1982); Federal Claims Collection Act (31 U.S.C. 3701 *et. seq.*).

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

* * * * *

c. For information related to uncollectible overpayments of benefits paid under section 701 of the Regional Rail Reorganization of 1973, in the event that this system of records, maintained by the Railroad Retirement Board to carry out its functions, indicates a violation or potential violation of law, whether civil, criminal or regulatory in nature, and whether arising by general statute or particular program statute, or by regulation, rule or order issued thereto, the relevant records in the system of records may be referred, as a routine use, to the appropriate agency, whether Federal, State, local or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, rule,

regulation or order issued pursuant thereto; for information related to uncollectible overpayments paid under any other Act administered by the Railroad Retirement Board, in the event this system of records maintained by the Railroad Retirement Board to carry out its functions indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, whether arising by general statute or particular program statute, or by regulation, rule or order issued pursuant thereto, the relevant records may be referred, as a routine use, to the appropriate agency, whether Federal, State, local or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation or order issued pursuant thereto, provided that disclosure would be to an agency engaged in functions related to the Railroad Retirement Act, or the Railroad Unemployment Insurance Act or provided that disclosure would be clearly in the furtherance of the interest of the subject individual.

* * * * *

RETENTION AND DISPOSAL:

Records of uncollectible accounts are maintained in an on-line eletronic database, they remain in the database until the debt is recovered, written off, or waived. Most paper document that are not immediately shredded are filed in claim folders that are covered by Privacy Act Systems of Records RRB–21, Railroad Unemployment and Sickness Insurance Benefit System, or RRB–22, Railroad Retirement, Survivor, and Pensioner Benefit System. These paper documents are mostly correspondence. Paper documents that relate to multiple accounts are kept for 6 years in folders established for the purpose.

* * * * *

RRB–43

SYSTEM NAME:

Investigation Files.

* * * * *

36. The following sections and paragraph in RRB–43 are revised to read as follows:

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Any of the following categories of individuals on whom a complaint is made alleging a violation of law, regulation, or rule pertinent to the administrartion of programs by the RRB, or, with respect to RRB employees, alleging misconduct or conflict of interest in the discharge of their official duties: Current and former employees of the Railroad Retirement Board; contractors; subcontractors; consultants; applicants for, and current and former recipients of, benefits under the programs administered by the Railroad Retirement Board; officials and agents of railroad employers; members of the public who are alleged to have stolen or unlawfully received RRB benefits or salary or assisted in such activity; and others who furnish information, products, or services to the RRB.

CATEGORIES OF RECORDS IN THE SYSTEM:

Letters, memoranda, and other documents alleging a violation of law, regulation or rule, or alleging misconduct, or conflict of interest; reports of investigations to resolve allegations with related exhibits, statements, affidavits or records obtained during the investigation; recommendations on actions to be taken; transcripts of, and documentation concerning requests and approval for, consensual telephone monitoring; reports from law enforcement bodies; prior criminal or noncriminal records as they relate to the investigation; reports of actions taken by management personnel regarding misconduct; reports of legal actions resulting from violations referred to the Department of Justice or other law enforcement agencies for prosecution.

* * * * *

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

a. Records may be disclosed to the Department of Justice or other law enforcement authorities in connection with actual or potential criminal prosecution or civil litigation initiated by the RRB, or in connection with requests by RRB for legal advice.

* * * * *

STORAGE:

Paper and electronic media.

* * * * *

SAFEGUARDS:

General access is restricted to the Inspector General and members of his staff; disclosure with the agency is on a limited need-to-know basis; records are maintained in locked file cabinets.

RETENTION AND DISPOSAL:

Paper files are retained for 10 years before they are destroyed by shredding.

* * * * *

RRB–44

SYSTEM NAME: Employee Test Score File.

* * * * *

37. The following section in RRB–44 is revised to read as follows:

RETENTION AND DISPOSAL

Records are kept for 3 years then destroyed by shredding.

BILLING CODE 7905–01–M

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of Filings and, Information Services, Washington, DC 20549.

Extension:

Rule 17f–1(g), SEC File No. 270–30, OMB Control No. 3235–0290

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

• Rule 17f–1(g) Requirements for reporting and inquiring with respect to missing, lost, counterfeit or stolen securities.

Paragraph (g) of Rule 17f–1 requires that all reporting institutions (i.e., every national securities exchange, member thereof, registered securities association, broker, dealer, municipal securities dealer, registered transfer agent, registered clearing agency, participant therein, member of the Federal Reserve System and bank insured by the FDIC) maintain and preserved a number of documents related to their participation in the Lost and Stolen Securities Program ("Program") under Rule 17f–1. The following documents must be kept in an easily accessible place for three years, according to paragraph (g): (a) copies or all reports of theft or loss (Form X–17F–1A) filed with the

Commission's designee; (b) all agreements between reporting institutions regarding registration in the Program or other aspects of Rule 17f–1; and (c) all confirmations or other information received from the Commission or its designee as a result of inquiry.

Reporting institutions utilize these records and reports (a) to report missing, lost, stolen or counterfeit securities to the data base, (b) to confirm inquiry of the data base, and (c) to demonstrate compliance with Rule 17f–1. The Commission and the reporting institutions' examining authorities utilize these records to monitor the incidence of thefts and losses incurred by reporting institutions and to determine compliance with Ruie 17f–1. If such records were not retained by reporting institutions, compliance with Rule 17f–1 could not be monitored effectively.

The Commission estimates that there are 24,518 reporting institutions (respondents) and, on average, each respondent would need to retain 33 records annually, with each retention requiring approximately 1 minute (33 minutes or .55 hours). The total estimated annual burden is 13,484.9 hours (24,518×.55 hours =13,484.9). Assuming an average hourly cost for clerical work of $10, the average total yearly record retention cost for each respondent would be $5.50. Based on these estimates, the total annual cost for the estimated 24,518 reporting institutions would be approximately $134,849.

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing on or before July 21, 1998.

Please direct your written comments to Michael E. Bartell, Associate Executive Director, Office of Information Technology, Securities and Exchange Commission, 450 5th Street, NW, Washington, DC 20549.

Dated: May 14, 1997.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

Submission for OMB Review; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission Office of Filings and Information Services Washington, DC 20549

Extension:

Rule 15Ba2–1 and Form MSD, SEC File No. 270–88, OMB Control No. 3235–0083

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") has submitted to the Office of Management and Budget a request for approval of extension on the following:

Rule 15Ba2–1 under the Securities Exchange Act of 1934 provides that an application for registration with the Commission by a bank municipal securities dealer must be filed on Form MSD.

The staff estimates that approximately 40 respondents will utilize this application procedure annually, with a total burden of 60 hours. The staff estimates that the average number of hours necessary to comply with the requirements of Rule 15Ba2–1 is 1.5 hours. The average cost per hour is approximately $40. Therefore, the total cost of compliance for the respondents is $2,400.

Providing the information on the application is mandatory in order to register with the Commission as a bank municipal securities dealer. The information contained in the application will not be confidential. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid control number.

General comments regarding the estimated burden hours should be directed to the following persons: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 3208, New Executive Office Building, Washington, D.C. 20503; and (ii) Michael E. Bartell, Associate Executive Director, Office of Information Technology, Securities and Exchange Commission, 450 Fifth Street, N.W., Washington, D.C. 20549. Comments must be submitted to OMB within 30 days of this notice.

Dated: May 15, 1998.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 23188]

Armada Funds, et al.; Notice of Application

May 15, 1998.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under section 6(c) of the Investment Company Act of 1940 (the "Act") from section 15(a) of the Act.

SUMMARY OF APPLICATION: Applicants, Armada Funds (the "Fund") and National Asset Management Corporation (the "Adviser"), request an order permitting the implementation, without prior shareholder approval, of new investment advisory agreements (the "New Agreements") between the Fund and the Adviser in connection with a change in control of the Adviser. The order would cover a period beginning on the date the requested order is issued until the date the New Agreements are approved or disapproved by the Fund's shareholders (but in no event later than July 6, 1998) ("Interim Period"). The order also would permit the Adviser to receive all fees earned under the New Agreement during the Interim Period following shareholder approval.

FILING DATES: The application was filed on April 3, 1998 and amended on May 13, 1998.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving Applicants with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on June 4, 1998, and should be accompanied by proof of service on Applicants in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a

hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW., Washington, DC 20549. Fund, One Freedom Valley Drive, Oaks, Pennsylvania 19456. Adviser, 101 South Fifth Street, Louisville, Kentucky 40402.

FOR FURTHER INFORMATION CONTACT: Shirley A. Bodden, Paralegal Specialist, at (202) 942–0575, or Edward P. Macdonald, Branch Chief, at (202) 942–0564 (Office of Investment Company Regulation, Division of Investment Management).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the SEC's Public Reference Branch, 450 Fifth Street, NW., Washington, DC 20549 (tel. 202–942–8090).

Applicants' Representations

1. The Fund is a Massachusetts business trust registered under the Act as an open-end management investment company. The Adviser is an investment adviser registered under the Investment Advisers Act of 1940. The Adviser manages three portfolios of the Fund under two investment advisory agreements with the Fund ("Prior Agreements").

2. On March 6, 1998, National City Corporation ("NCC") sold all of the Adviser's outstanding stock to the Adviser's principal management team (the "Transaction"). Applicants state that the Transaction resulted in an assignment of the Prior Agreements. Applicants request an exemption: (i) To permit the implementation, without prior shareholder approval, of the New Agreements; and (ii) to permit the Adviser to receive from the Fund all fees earned under the New Agreements during the Interim Period if, and to the extent, the New Agreements are approved by the Fund's shareholders.[1]

3. On March 6, 1998, the Fund's board of trustees (the "Board"), including a majority of the trustees who are not interested persons of the Fund within the meaning of section 2(a)(19) of the Act ("Independent Trustees"), met in-person and approved the New Agreements. The New Agreements are identical in substance to the Prior Agreements except for their effective and termination dates and certain escrow provisions as described below. Proxy materials to vote on the New Agreements are expected to be mailed to the Fund's shareholders on or about May 18, 1998. The requisite shareholder meetings are expected to take place on or about June 29, 1998.

4. Applicants have entered into an escrow arrangement with an unaffiliated financial institution ("Escrow Agent"). The fees payable to the Adviser under the New Agreements during the Interim Period will be paid into an interest-bearing escrow account maintained by the Escrow Agent. The amounts in the escrow account (including interest earned on such paid fees) will be paid to the Adviser only if the Fund's shareholders approve the New Agreements. If the Interim Period has ended and the Fund's shareholders have failed to approve the New Agreements, the Escrow Agent will pay to the Fund the escrow amounts (including any interest earned). Before the release of any escrow amounts, the Independent Trustees will be notified.

Applicant's Legal Analysis

1. Section 15(a) of the Act provides, in pertinent part, that it shall be unlawful for any person to serve or act as an investment adviser of a registered investment company, except pursuant to a written contract that has been approved by the vote of a majority of the outstanding voting securities of such registered investment company. Section 15(a) of the Act further requires that such written contract provide for automatic termination in the event of its "assignment." Section 2(a)(4) of the Act defines "assignment" to include any direct or indirect transfer of a contract by the assignor, or of a controlling block of the assignor's outstanding voting securities by a security holder of the assignor.

2. Applicants state that, upon completion of the Transaction, control of the Adviser was transferred to the Adviser's principal management team. Accordingly, the Transaction resulted in an assignment of the Prior Agreements and thus their automatic termination.

3. Rule 15a–4 provides in pertinent part, that if an investment advisory contract with an investment company is terminated by an assignment in which the adviser does not directly or indirectly receive a benefit, the adviser may continue to act as such for the company for 120 days under a written contract that has not been approved by the company's shareholders, provided that: (a) The new contract is approved by that company's board of directors (including a majority of directors who are not interested persons of the company); (b) the compensation to be paid under the new contract does not exceed the compensation that would have been paid under the contract most recently approved by the company's shareholders; and (c) neither the adviser or any controlling person of the adviser "directly or indirectly receives money or other benefit" in connection with the assignment. Applicants state that they cannot rely on rule 15a–4 because of the benefits the Adviser will receive from the Transaction.

4. Section 6(c) provides that the SEC may exempt any person, security, or transaction from any provision of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Applicants submit that the requested relief meets this standard.

5. Applicants submit that the timing of the Transaction arose primarily out of business considerations unrelated to the Fund and did not reasonably present an opportunity to secure prior approval of the New Agreements by the Fund's shareholders. Applicants state that the requested relief would permit the continuity of investment management for the Fund, without interruption, during the period following the issuance of the requested order.

6. Applicants submit that the scope and quality of investment advisory services provided to the Fund during the Interim Period will not be diminished. During the Interim Period, the Adviser will operate under the New Agreements, which will be substantively the same as the Prior Agreements, except for their effective and termination dates and escrow provisions. Applicants are not aware of any material changes in the personnel that will provide investment management services during the Interim Period. Accordingly, the Fund should receive, during the Interim Period, the same investment advisory services, provided in the same manner, as the Fund received before the Transaction.

7. Applicants assert that to deprive the Adviser of fees during the Interim Period would be a harsh result and an unreasonable penalty to attach to the Transaction and would serve no useful purpose. Applicants submit that the fees payable to the Adviser under the New Agreements during the Interim Period will be maintained in an interest-bearing escrow account by the Escrow Agent. Such fees will not be released by the Escrow Agent to the Adviser without notice to the Independent

[1] The Adviser has continued to serve as investment adviser to the Fund since the Transaction in a manner consistent with its fiduciary duty to the Fund even though the Fund's shareholders have not approved the New Agreements. Applicants acknowledge that the Fund may be required to pay, with respect to the period until receipt of the order, no more than the actual out-of-pocket cost to the Adviser for providing advisory services to the Fund.

Trustees and appropriate certifications that the New Agreements have been approved by the Funds' shareholders.

Applicants' Conditions

Applicants agree as conditions to the issuance of the exemptive order requested by the application that:

1. The New Agreements will have the same terms and conditions as the Prior Agreements, except for their effective and termination dates and escrow provisions.

2. Fees earned by the Adviser in respect of the New Agreements during the Interim Period will be maintained in an interest-bearing escrow account, and amounts in the account (including interest earned on such paid fees) will be paid: (a) To the Adviser in accordance with the New Agreements, after the requisite shareholder approval is obtained; or (b) to the Fund portfolio which paid the fees, in the absence of shareholder approval with respect to the Fund portfolio.

3. The Fund will hold a meeting of shareholders to vote on approval of the New Agreements on or before the 120th day following the termination of the Prior Agreements (but in no event later than July 6 1998).

4. The Adviser will bear the costs of preparing and filing the application and the costs relating to the solicitation of shareholder approval of the New Agreement necessitated by the Transaction.

5. The Adviser will take all appropriate steps so that the scope and quality of advisory and other services provided to the Fund during the Interim Period will be at least equivalent, in the judgment of the Board, including a majority of the Independent Trustees, to the scope and quality of services previously provided. In the event of any material change in the personnel providing services pursuant to the New Agreements, the Adviser will apprise and consult with the Board to assure that the Trustees, including a majority of the Independent Trustees, are satisfied that the services provided will not be diminished in scope or quality.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 23189; 812–10972]

General American Investors Company, Inc.; Notice of Application

May 15, 1998.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for an exemption under section 6(c) of the Investment Company Act of 1940 (the "Act") from section 19(b) of the Act and rule 19b–1 under the Act.

SUMMARY OF APPLICATION: Applicant, General American Investors Company, Inc., requests an order to permit it to make periodic distributions of net long-term capital gains in any one taxable year, so long as applicant maintains in effect a distribution policy with respect to its preferred stock calling for periodic dividends in an amount equal to a specified percentage of the liquidation preference of the preferred stock.

FILING DATES: The application was filed on January 16, 1998 and amended on April 29, 1998.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving applicant with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on June 9, 1998, and should be accompanied by proof of service on applicant in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW., Washington, DC 20549. Applicant: General American Investors Company, Inc., 450 Lexington Avenue, New York, New York 10017.

FOR FURTHER INFORMATION CONTACT: Edward P. Macdonald, Branch Chief, at (202) 942–0564 (Office of Investment Company Regulation, Division of Investment Management).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the SEC's Public Reference Branch, 450 Fifth Street, NW., Washington, DC 20549 (tel. 202–942–8090).

Applicant's Representations

1. Applicant is registered under the Act as an internally-managed closed-end management investment company organized as a Delaware corporation. Applicant's board of directors has authorized it to issue and sell cumulative preferred stock. Applicant's investment objective is long term capital appreciation.

2. Applicant wishes to institute a dividend payment policy with respect to its cumulative preferred stock, and any future preferred stock, to be issued by applicant calling for periodic dividends in an amount equal to a specified percentage of the liquidation preference of applicant's preferred stock ("Distribution Policy"). The specified percentage may be determined at the time the preferred stock is initially issued, pursuant to periodic remarketings or auctions, or otherwise. Under the requested relief, the periodic payments may include long-term capital gains so long as applicant maintains in effect the Distribution Policy.

Applicant's Legal Analysis

1. Section 19(b) of the Act provides that a registered investment company may not in contravention of such rules, regulations, or orders as the SEC may prescribe, distribute long-term capital gains more often than once every twelve months. Rule 19b–1 under the Act limits the number of capital gains distributions, as defined in section 851(b)(3)(C) of the Internal Revenue Code of 1986, as amended (the "Code"), that applicant may make with respect to any one taxable year to one, plus a supplemental distribution made pursuant to section 855 of the Code not exceeding 10% of the total amount distributed for the year, plus one additional net long-term capital gains distribution made in whole or in part to avoid the excise tax under section 4982 of the Code.

2. Applicant argues that rule 19b–1 may prevent the normal operation of the Distribution Policy whenever applicant's realized net long-term capital gains in any year exceed the total of the periodic distributions that under rule 19b–1 may include capital gains. In that situation, applicant asserts that rule 19b–1 effectively forces the distributions that under rule 19b–1 may not include these capital gains to be treated as a return of capital to stockholders, even though net long-term capital gains would otherwise be available. Applicant further states that federal tax rules require that current earnings and profits be allocated proportionately among all distributions

made for that year. The net long-term capital gains in excess of the periodic distributions permitted by rule 19b–1 then must either be added to one of the permitted capital gains distributions resulting in the total distributions for the year in excess of the amount required to be paid, added to a permitted distribution of long-term capital gains on the common stock, or retained by applicant (with applicant paying taxes on those amounts). Accordingly, applicant states that the requested relief would permit it to operate the Distribution Policy with respect to the preferred stock without these unintended adverse consequences.

3. Applicant asserts that its requested relief does not give rise to the concerns underlying section 19(b) of the Act and rule 19b–1. One of these concerns was that stockholders might not be able to distinguish between frequent distributions of capital gains and dividends from investment income. Applicant states that in the case of preferred stock there is little chance for investor confusion since all an investor expects to receive is the specified distribution for any particular dividend period, and no more. Moreover, in accordance with rule 19a–1 under the Act, a separate statement showing the sources of the distribution will accompany each periodic dividend, with a statement provided near the end of the last dividend period in a year indicating the sources (*i.e.*, net investment income and short-term capital gains, net long-term capital gains and return of capital) of each distribution that was made during the year. In addition, applicant notes that the amount and sources of distributions received during the year will be included on applicant's IRS Form 1099–DIV report sent to stockholders who received distributions during the year. This information will also be included in applicant's annual report to stockholders.

4. Applicant submits that another concern underlying section 19(b) and rule 19b–1, was that frequent capital gains distributions could facilitate improper fund distribution practices, including the practice of urging an investor to purchase shares on the basis of an upcoming dividend ("selling the dividend"), where the dividend results in an immediate corresponding reduction in net asset value and is in effect a return of the investor's capital. Applicant believes that this concern does not apply to preferred stock which entitles a holder to a specified periodic dividend and no more and, like a debt security, is initially sold at a price based on its liquidation preference plus an amount equal to any accumulated dividends. Applicant also states that this concern does not arise with regard to closed-end investment companies which do not continuously distribute their shares.

5. Section 6(c) of the Act provides that the SEC may exempt any person, security, or transaction from any provision of the Act, or from any rule thereunder, if such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. For the reasons stated above, applicant believes that the requested exemption from section 19(b) of the Act and rule 19b–1, meets the standards set forth in section 6(c) of the Act.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Pacific Exchange, Inc. Relating to Expansion of the LMM Book Pilot Program

May 15, 1998.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 16, 1998, the Pacific Exchange, Inc. ("PCX" or "Exchange") filed with the Securities and Exchange Commission ("Commission" or "SEC") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization.[3] The Commission is published this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4 (1991).

[3] The Exchange had initially submitted the filing prior to April 16, 1998, but that submission did not include a signature page. By letter dated April 14, 1998, the Exchange filed Amendment No. 1 to the filing, which contained signatures for the filing. *See* Letter from Michael D. Pierson, Senior Attorney, Regulatory Policy, PCX, to Marie D'Aguanno Ito, Special Counsel, Division of Market Regulation, Commission, dated April 14, 1998.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The PCX is proposing to remove the current cap on the number of LMMs who may participate in the program.[4]

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

Purpose

On October 11, 1997, the Commission approved an Exchange proposal to adopt a one-year pilot program under which a limited number of LMMs would be able to assume operational responsibility for the options public limit order book ("Book") in certain option issues.[5] On September 22, 1997, the Commission approved an Exchange proposal to extend the program for one year, so that it is currently set to expire on October 12, 1998.[6]

Under the pilot program, approved LMMs manage the Book function, take responsibility for trading disputes and errors, set rates for Book execution, and pay the Exchange a fee for systems and services.[7] Currently, both multiply-listed and non-multiply-listed option

[4] On May 1, 1998, PCX submitted Amendment No. 2 to the filing, seeking to withdraw the portion of the filing that proposed removing the limit on the number of option issues that may be included in the LMM program. The PCX represented in the Amendment that such proposal would be submitted in a separate filing. See Letter from Michael D. Pierson, Senior Attorney, Regulatory Policy, to Marie D'Aguanno Ito, Special Counsel, Division of Market Regulation, Commission, dated April 30, 1998.

[5] See Exchange Act Release No. 37810 (October 11, 1996), 61 FR 54481 (October 18, 1997) (approving File No. SR–PSE–96–09).

[6] See Exchange Act Release No. 39106 (September 22, 1997), 62 FR 31172 (September 30, 1997).

[7] See Exchange Act Release No. 37874 (October 28, 1996), 61 FR 56597 (November 1, 1996) (approving SR–PSE–96–38, establishing a staffing charge for LMMs who participate in the pilot program); see also File No. SR–PCX–98–03 (proposal to modify the LMM Book Pilot staffing charge).

issues are eligible to be traded under the pilot program.[8] Initially, the program was limited by allowing no more than three LMMs to participate in the program and no more than 40 option symbols to be used. But on April 1, 1997, the Commission approved an Exchange proposal to expand the program so that up to nine LMMs may participate and up to 150 option symbols may be used.[9]

The Exchange is now proposing to expand the LMM Book Pilot Program to eliminate the cap on the number of LMMs that may participate in the program. The Exchange notes that the program has been in operation for approximately eighteen months and no significant problems have occurred. The program has been viable and effective, and has resulted in significant cost savings to customers in Book execution charges. The Exchange believes that it has adequate systems and operation capacity to expand the scope of the program beyond its current limits.

The Exchange believes that the proposed change will make the Exchange LMM Program more competitive because it will provide LMMs with the same flexibility currently held by options specialists at other exchanges, and DPMs at the Chicago Board Options Exchange.

Basis

The Exchange believes the proposed rule change is consistent with Section 6(b) [10] of the Act, in general, and furthers the objectives of Section 6(b)(5),[11] in particular, in that it is designed to facilitate transactions in securities, to promote just and equitable principles of trade, and to protect investors and the public interest.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments on the proposed rule change were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, N.W., Washington, D.C. 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room, 450 Fifth Street, N.W., Washington, D.C. 20549. Copies of such filing will also be available for inspection and copying at the principal office of the PCX. All submissions should refer to File No. SR–PCX–98–17 and should be submitted by June 12, 1998.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[12]

Jonathan G. Katz,

Secretary.

SMALL BUSINESS ADMINISTRATION

[Declaration of Disaster #3076]

State of Alabama; Amendment #2

In accordance with a notice from the Federal Emergency Management Agency dated April 29, 1998, the above-numbered Declaration is hereby amended to include Walker County in the State of Alabama as a disaster area due to damages caused by severe storms and tornadoes beginning on April 8, 1998 and continuing through April 20, 1998.

In addition, applications for economic injury loans from small businesses located in the contiguous county of Marion, Alabama may be filed until the specified date at the previously designated location. Any counties contiguous to the above-name primary county and not listed herein have been previously declared.

All other information remains the same, i.e., the deadline for filing applications for physical damage is June 8, 1998 and for economic injury the termination date is January 11, 1999.

(Catalog of Federal Domestic Assistance Program Nos. 59002 and 59008)

Dated: May 8, 1998.

Bernard Kulik,

Associate Administrator for Disaster Assistance.

BILLING CODE 8025–01–P

SOCIAL SECURITY ADMINISTRATION

Statement of Organization, Functions and Delegations of Authority

This statement amends Part S of the Statement of the Organization, Functions and Delegations of Authority which covers the Social Security Administration (SSA). Chapter S8 covers the Office of the Inspector General (OIG). Notice is given that Chapter S8, the Office of the Inspector General, is being amended to reflect a realignment of functions and typographical changes. The Office of Operations (OP) (S8J) is being abolished and the functions are being incorporated into the Office of Management Services (OMS) (S8G). Divisional functions are being realigned in both the Office of Investigations (OI) (S8B) and the Office of Audit (OA) (S8C). New divisional structures are being established to achieve the functional realignment. A Deputy Counsel is being established in the Office of the Counsel to the Inspector General (OCIG) (S8H). Typographical changes are also being made in the OCIG (S8H). The revised chapter reads as follows:

Section S8.10 *The Office of the Inspector General—(Organization):*

Delete:

H. The Office of Operations (OP) (S8J).

Section S8.20 *The Office of the Inspector General*—(Functions):

Amend to read as follows:

F. The Office of Management Services (OMS) (S8G) provides staff assistance to the Inspector General (IG) and Deputy Inspector General. OMS formulates and assists the IG with the execution of the OIG budget and confers with the Office of the Commissioner, the Office of Management and Budget and the Congress on budget matters. The office manages and maintains the OIB Allegation Management System (AMS) data base for all allegations reported to the OIG nationwide. OMS conducts management analyses and establishes and coordinates general management policies of the OIG. This office serves as the OIG liaison on personnel management and other administrative and management policies and practices, as well as on equal employment opportunity and civil rights matters. This office is also responsible for the development, design and redesign of major automated systems throughout the OIG. OMS is responsible for and coordinates the OIG's strategic planning function and the development and implementation of performance measures required by the Government Performance and Results Act; public affairs; interagency activities; OIG reporting requirements and publications; and responses to Congressional inquiries.

Delete in its entirety:

H. The Office of Operations (OP) (S8J).

Section S8B.10 *The Office of Investigations*—(Organization):

Delete:

I. The Washington, D.C. Field Division (WFD) (S8BJ).

K. The Tampa Field Division (TFD) (S8BL).

Reletter:

"J." to "I."
"L." to "J."
"M." to "K."
"N." to "L."

Establish

M. The Philadelphia Field Division (PFD) (S8BQ).

N. The St. Louis Field Division (SLFD) (S8BR).

O. The Denver Field Division (DVFD) (S8BS).

P. The Seattle Field Division (SFD) (S8BT).

Q. The Allegation Management Division (AMD) (S8BU).

Section S8B.20 *The Office of Investigations*—(Functions):

Delete in its entirety:

I. The Washington, D.C. Field Division (WFD) (S8BJ).

K. The Tampa Field Division (TFD) (S8BL).

Reletter:
"J." to "I."
"L." to "J."
"M." to "K."
"N." to "L."

Establish:

M. The Philadelphia Field Division (PFD) S8BQ) is responsible for conducting criminal, civil and administrative investigations of fraud involving Social Security programs and operations within the designated geographic area. Investigative efforts by the division lead to criminal convictions, civil monetary penalties, or administrative sanctions.

N. The St. Louis Field Division (SLFD) (S8BR) is responsible for conducting criminal, civil and administrative investigations of fraud involving Social Security programs and operations within the designated geographic area. Investigative efforts by the division lead to criminal convictions, civil monetary penalties, or administrative sanctions.

O. The Denver Field Division (DVFD) (S8BS) is responsible for conducting criminal, civil and administrative investigations of fraud involving Social Security programs and operations within the designated geographic area. Investigative efforts by the division lead to criminal convictions, civil monetary penalties, or administrative sanctions.

P. The Seattle Field Division (SFD) (S8BT) is responsible for conducting criminal, civil and administrative investigations of fraud involving Social Security programs and operations within the designated geographic area. Investigative efforts by the division lead to criminal convictions, civil monetary penalties, or administrative sanctions.

Q. The Allegation Management Division (AMD) (S8BU) is responsible for managing the SSA Hotline, which plans, conducts, directs, and assists criminal investigations of alleged violations of the Social Security laws. The division reviews OIG files and records in response to the Freedom of Information Act requests.

Section S8C.10 *The Office of Audit*—(Organization):

Delete:

H. The Systems and Financial Audit Division (SFAD) (S8CJ).

Establish:

H. The Systems Audit Division (SAD) (S8CK).

I. The Financial Audit Division (FAD) (S8CL).

Section S8C.20 *The Office of Audit*—(Functions):

D. The Evaluations and Technical Services Division (ETSD) (S8CB).

Amend to read as follows:

4. The division audits and evaluates SSA's efforts to ensure payment accuracy for General Management Audits, Old-Age and Survivors Insurance, Disability Insurance, and Supplemental Security Income programs.

E. The Eastern Program Audit Division (EPAD) (S8CE).

Amend to read as follows:

1. The primary responsibilities include Enumeration and Operations.

Delete in its entirety:

H. The Systems and Financial Audit Division (SFAD) (S8CJ).

Establish:

H. The Systems Audit Division (SAD) (S8CK) plans, conducts, oversees and reports on the results of audits of the Centralized Automated Systems. The division is also responsible for general and application controls in SSA's automated data processing systems and for reviews of the operational efficiency of SSA's data processing operations.

I. The Financial Audit Division (FAD) (S8CL) plans, conducts, oversees and reports on the results of audits of Agency financial statements.

1. The division is responsible for financial management, as defined in the Chief Financial Officers' Act of 1990, the include audits of accounting and financial reporting, financial systems, asset management, information resource management, budget execution and internal controls.

2. The division is also responsible for finance contracts and Disability Determination Services' administrative costs.

Section S8G.00 *The Office of Management Services—(Mission):*

Amend to read as follows:

The Office of Management Services (OMS) (S8G) provides staff assistance to the Inspector General (IG) and Deputy Inspector General. OMS formulates and assists the IG with the execution of the OIG budget and confers with the Office of the Commissioner, the Office of Management and Budget and the Congress on budget matters. The office manages and maintains the OIG Allegation Management System (AMS) data base for all allegations reported to the OIG nationwide. OMS conducts management analyses and establishes and coordinates general management policies of the OIG. This office serves as the OIG liaison on personnel management and other administrative and management policies and practices, as well as on equal employment opportunity and civil rights matters. This office is also responsible for the development, design and redesign of major automated systems throughout the OIG. OMS is responsible for and coordinates the OIG's strategic planning function and the development and implementation of performance measures required by the Government Performance and Results Act; public affairs; interagency activities; OIG reporting requirements and publications; and responses to Congressional inquiries.

Section S8G.20 *The Office of Management Services*—(Functions):

B. The Deputy Assistant Inspector General for Management Services (S8G).

Delete item 2 in its entirety.

Renumber:

"3." To "2."

Amend item 2 to change the last two words of the first sentence from "OIG Hotline" to "SSA Hotline."

Add:

3. Manages and coordinates the OIG's strategic planning function and the development and implementation of performance measures required by the Government Performance and Results Act; pubic affairs; interagency activities; OIG reporting requirements and publications; and responses to Congressional inquires.

Section S8H.00 *The Office of the Counsel to the Inspector General*—(Mission):

Amend the second sentence to read as follows:

"The OCIG provides advice on a variety of legal issues concerning relevant regulatory and procedural information and reviews documents and other materials to ensure legal sufficiency and compliance with regulatory requirements."

Section S8H.10 *The Office of the Counsel to the Inspector General*—(Organization):

Reletter:

"B." to "C."

Establish;

B. Deputy Counsel to the Inspector General (S8H).

Section S8H.20 *The Office of the Counsel to the Inspector General*—(Functions):

Reletter:

"B." to "C."

Establish:

B. The Deputy Counsel to the Inspector General assists the Counsel to the Inspector General in carrying out his/her responsibilities. Performs other duties as the Counsel to the Inspector General may prescribe.

C. The Immediate Office of the Counsel to the Inspector General (S8H).

Delete from item 6 "and Freedom of Information."

Delete existing Subchapter S8J, the Office of Operations.

Dated: April 3, 1998.

David C. Williams,

Inspector General for Social Security.

TENNESSEE VALLEY AUTHORITY

Paperwork Reduction Act of 1995, as Amended by Public Law 104–13; Proposed Collection, Comment Request

AGENCY: Tennessee Valley Authority.

ACTION: Proposed Collection; comment request.

SUMMARY: The proposed information collection described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended). The Tennessee Valley Authority is soliciting public comments on this proposed collection as provided by 5 CFR 1320.8(d)(1). Requests for information, including copies of the information collection proposed and supporting documentation, should be directed to the Agency Clearance Officer: Wilma H. McCauley, Tennessee Valley Authority, 1101 Market Street (WR 4Q), Chattanooga, Tennessee 37402–2801; (423) 751–2523. Comments should be sent to the Agency Clearance Officer no later than July 21, 1998.

SUPPLEMENTARY INFORMATION:

Type of Request: Regular submission.

Title of Information Collection: Power Distributor Monthly & Annual Reports to TVA.

Frequency of Use: Monthly and Annual.

Type of Affected Public: Business or Local Government.

Small Businesses or Organizations Affected: Yes.

Federal Budget Functional Category Code: 271.

Estimated Number of Annual Responses: 2,067.

Estimated Total Annual Burden Hours: 3,816.

Estimated Average Burden Hours Per Response: 1.8 hours.

Need For and Use of Information: This information collection supplies TVA with financial and accounting information to help ensure that electric power produced by TVA is sold to consumers at rates which are as low as feasible.

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

Reports, Forms and Recordkeeping Requirements Agency Information Collection Activity Under OMB Review

AGENCY: Office of the Secretary, DOT.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Requests (ICRs) abstracted below have been forwarded to the Office of Management and Budget (OMB) for review and approval. The ICRs describe the nature of the information collections and their expected burden. The **Federal Register** Notice with a 60-day comment period soliciting comments on the following information collections was published on February 19, 1998 [63 FR 8517–8522].

DATES: Comments must be submitted on or before June 22, 1998.

FOR FURTHER INFORMATION CONTACT: Michael Robinson, NHTSA Information Collection Clearance Officer at (202) 366–9456.

SUPPLEMENTARY INFORMATION:

National Highway Traffic Safety Administration (NHTSA)

(1) Title: 49 CFR Part 573, Defect and Noncompliance Reports.

OMB Control Number: 2127–0004.

Type Request: Extension of a currently approved collection.

Form(s): NA.

Affected Public: Business or other for-profit.

Abstract: NHTSA's statute at 49 U.S.C. 30112, and 30116–30121 requires the manufacturers of motor vehicles and motor vehicle equipment to recall and remedy their products that do not comply with applicable safety standards or contain a defect related to motor vehicle safety. The manufacturer must notify the Secretary of Transportation (through NHTSA), owners, purchasers and dealers of its determination, and must remedy the defect or noncompliance. The notification must be furnished within a reasonable time after a determination is made with respect to defect or failure to comply. The manufacturer of each motor vehicle or item of replacement equipment presented for remedy shall make the remedy without charge. If a manufacturer fails to notify owners or purchasers within the period specified, the court may hold it liable under a civil penalty with respect to such failure.

The Secretary may hold hearings in which any interested person may make

oral or written views on questions of whether a manufacturer has reasonably met its obligations to notify and remedy a defect or failure to comply, or the Secretary may place specific actions on the manufacturer to comply. The manufacturer shall furnish the Secretary with a true copy of all notices, bulletins, and other communications to the manufacturer's dealers, owners and purchasers regarding any defect or noncompliance in the manufacturer's vehicle or item of equipment. These statutes shall not create or affect any warranty obligations under State and Federal law. To implement this authority, NHTSA promulgated 49 CFR Part 573, Defect and Noncompliance Reports. This regulation sets out the following requirements: (1) Manufacturers are to include specific information in reports that must be filed with NHTSA within five working days of a determination of defect or noncompliance, pursuant to 49 U.S.C. 30118 and 30119; (2) Manufacturers are to submit quarterly reports to the agency on the progress of recall campaigns; (3) Manufacturers are to furnish copies to the agency of notices, bulletins, and other communications to dealers, owners, or purchasers regarding any defect or noncompliance, and; (4) Manufacturers are to retain records of owners or purchasers of their products that have been involved in a recall campaign.

Estimated Annual Burden: 6,300 hours.

(2) Title: Consumer Complaint/Recall Audit Information.

OMB Control Number: 2127–0008.

Type Request: Extension of a currently approved collection.

Form(s): HS Form 350 and 350C.

Affected Public: Individuals or households.

Abstract: Chapter 301 of Title 49 of the United States Code (formerly the National Traffic and Motor Vehicle Safety Act, as amended (the Act), the Secretary of Transportation is authorized to require manufacturers of motor vehicles and items of motor vehicle equipment to conduct owner notification and remedy, i.e., a recall campaign, when it has been determined that a safety defect exists in the performance, construction, components, or materials in motor vehicles and motor vehicle equipment. To make this determination, the National Highway Traffic Safety Administration (NHTSA) solicits information from vehicle owners which is used to identify and evaluate possible safety-related defects and provide the necessary evidence of the existence of such a defect. Under the Authority of Chapter 301 of Title 49 of the United States Code, the Secretary of Transportation is authorized to require manufacturers of motor vehicle and items of motor vehicle equipment which do not comply with the applicable motor vehicle safety standards or contains a defect that relates to motor vehicle safety to notify each owner that their vehicle contains a safety defect or noncompliance. Also, the manufacturer of each such motor vehicle or item of replacement equipment presented for remedy pursuant to such notification shall cause such defect or noncompliance to be remedied without charge. In the case of a motor vehicle presented for remedy pursuant to such notification, the manufacturer shall cause the vehicle to be remedied by whichever of the following means he elects: (1) By repairing such vehicle; (2) by replacing such motor vehicle without charge; or (3) by refunding the purchase price less depreciation. To ensure these objectives are being met, NHTSA audits recalls conducted by manufacturer. These audits are performed on a randomly selected number of vehicle owners for verification and validation purposes.

Estimated Annual Burden: 36,380 hours.

(3) Title: 49 CFR Part 537—Automotive Fuel Economy Reports.

OMB Control Number: 2127–0019.

Type Request: Extension of a currently approved collection.

Affected Public: Business or other for-profit.

Abstract: 49 United States Code (U.S.C.) 32907(a) requires a manufacturer report to the Secretary of Transportation on whether the manufacturer will comply with an applicable average fuel economy standard under 49 U.S.C. 32902 of this title for the model year for which the report is made; the actions the manufacturer has taken or intends to take to comply with the standard; and other information the Secretary requires by regulation. To start this statutory requirement, the agency issued a regulation specifying the required content of the Automotive Fuel Economy Reports.

Estimated Annual Burden: 3,300 hours.

(4) Title: Consolidated Labeling Requirements for Motor Vehicles (Except the VIN).

OMB Control Number: 2127–0512.

Type Request: Extension of a currently approved collection.

Affected Public: Business or other for-profit.

Abstract: 49 U.S.C. 3011 authorizes the issuance of Federal Motor Vehicle Safety Standards (FMVSS) and regulations. The agency, in prescribing a FMVSS or regulation is to consider available relevant motor vehicle safety data, and consult with other agencies as it deems appropriate. Further, the statute mandates that in issuing any FMVSS or regulation, the agency consider whether the standard or regulation is "reasonable, practicable and appropriate for the particular type of motor vehicle or item of motor vehicle equipment for which it is prescribed," and whether such a standard will contribute to carrying out the purpose of the Act. The Secretary is authorized to revoke such rules and regulations as he deems necessary to carry out this subchapter. Using this authority, the agency issued the following FMVSS and regulations, specifying labeling requirements to aid the agency in achieving many of its safety goals. FMVSS 105, 205, 209, and 567 are the standards the agency issued. Through FMVSS 105, this standard, under section 5.4 requiring labeling, each vehicle shall have a brake fluid warning statement in letters at least one-eighth of an inch high on the master cylinder reservoirs and located so as to be visible by direct view. FMVSS 205 requires manufacturer's distinctive trademark; manufacturer's DOT code number; Mode of glazing (alpha-numerical designation) and Type of glazing (there are currently 13 items of glazing ranging from plastic windows to bullet resistant windshields). In addition to requirements which apply to all glazing, certain specialty items such as standee windows in buses, roof openings and interior partitions made of plastic require that the manufacturer affix a removable label to each item. The label specifies cleaning instructions which will minimize the loss of transparency. Other information may be provided by the manufacturer but is not required. FMVSS 209-Seat belt Assemblies requires safety belts to be labeled with the year of manufacture, the; model and the name or trademark of the manufacturer (S4.5(j). Additionally, replacement safety belts that for specific models of motor vehicles must have labels or accompanying instruction sheets to specify the applicable vehicle models and seating positions (S4.5(k)). All other replacement belts are required to be accompanied by an installation instruction sheet (S4.1(k)). Seat belt assemblies installed as original equipment in new motor vehicles need not be required to be labeled with position model information. This information is only useful if the assembly is removed with the intention

of using the assembly as a replacement in another vehicle; this is not a common practice. 49 U.S.C. 30111 requires each manufacturer or distributor of motor vehicle to furnish to the dealer or distributor of the vehicle a certification that the vehicle meets all applicable FMVSS. This certification is required by that provision to be in the form of a label permanently affixed to the vehicle. Under 49 U.S.C. 32504, vehicle manufacturers are directed to make a similar certification with regard to bumper standards. To implement this requirement, NHTSA issued 49 CFR Part 567. The agency's regulations establish form and content requirement for the certification labels.

Estimated Annual Burden: 71,095 hours.

(5) Title: 49 CFR 571.116, Motor Vehicle Brake Fluids.

OMB Control Number: 2127–0521.

Type Request: Extension of a currently approved collection.

Affected Public: Business or other for-profit.

Abstract: 49 U.S.C. 309111, 30112 and 30117 of the National Traffic and Motor Vehicle Safety Act of 1966, authorize the issuance of Federal Motor Vehicle Safety Standards (FMVSS). The agency in prescribing a FMVSS is to consider available relevant motor vehicle safety data and to consult with appropriate agencies and obtain safety comments/ suggestions from the responsible counties, States, agencies, safety commissions, public and other safety related authorities. Further the Act mandates that in issuing any FMVSS the agency consider whether the standards will contribute to carry out the purpose of the Act. The Secretary is authorized to revoke such rules and regulations as he/she deems necessary to carry out this Act. FMVSS No. 116 Motor Vehicle Brake Fluids, specific performance and design requirements for motor vehicle brake fluids and hydraulic system mineral oils. Section 5.2.2 specific labeling requirements for manufacturers and packagers of brake fluids as well as packagers of hydraulic system mineral oils. The information on the label of a container of motor vehicle brake fluid or hydraulic system mineral oil is necessary to insure the following: the contents of the container are clearly stated; these fluids are used for their intended purpose only; and the containers are properly disposed of when empty. Improper use or storage of these fluids could have dire consequences for the operations of vehicles or equipment in which they area used. This labeling information is used by motor vehicle owners, operators, and vehicle service facilities to aid in the proper selection of brake fluids and hydraulic system mineral oils for use in motor vehicles and hydraulic equipment, respectively.

Estimated Annual Burden: 7,680 hours.

(6) Title: Drug Offender's License Suspension Certification.

OMB Control Number: 2127–0566.

Type Request: Extension of a currently approved collection.

Affected Public: Local, State or Tribal Government.

Abstract: Section 33 of the Department of Transportation (DOT) and Related Agencies Appropriations Act for FY 1991 amends 23 U.S.C. 104, and requires the withholding of certain Federal-aid highway funds from States that do not enact legislation requiring the revocation or suspension of an individual's driver's license upon conviction for any violation of the Controlled Substances Act or any drug offense. This notice proposes the violation of the Controlled Substances Act or any drug offense. This notice proposes the manner in which States certify that they are not subject to this withholding, and disposition of funds that are withheld.

Estimated Annual Burden: 260 hours.

(7) Title: Voluntary Child Safety Seat Registration Form.

OMB Control Number: 2127–0576.

Type Request: Extension of a currently approved collection.

Affected Public: Individuals or households.

Abstract: Chapter 301 of Title 49 of the United States provides that if either NHTSA or a manufacturer determines that motor vehicles or items of motor vehicle equipment contain a defect that relates to motor vehicle safety or fail to comply with an applicable Federal Motor Vehicle Safety Standard, the manufacturer must notify owners and purchasers of the defect or noncompliance and must provide a remedy without charge. Pursuant to 49 CFR Part 577 Defects and noncompliance notification for equipment items, including child safety seats, must be sent by first class mail to the most recent purchaser known to the manufacturer. In the absence of a registration system, man owners of child safety seats are not notified of safety defects and noncompliance, since the manufacturer is not aware of their identities.

Estimated Annual Burden: 26 hours.

ADDRESSES: Send comments, within 30 days, to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725–17th Street, NW., Washington, DC 20503, Attention DOT Desk Officer. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

A comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

Issued in Washington, DC, on May 13, 1998.

Phillip A. Leach,

Clearance Officer, United States Department of Transportation.

BILLING CODE 4910–62–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No. OST–98–1472]

Privacy Act of 1974; Notice to Amend System of Records to Include a New Routine Use

AGENCY: United States Coast Guard, DOT.

ACTION: Notice to amend system of records to include a new routine use.

SUMMARY: The Department of Transportation, on behalf of the United States Coast Guard, proposes to alter a system of records subject to the Privacy Act of 1974. The records system is the Military Pay and Personnel System, DOT/CG–623. The system will be altered to include, as a Routine Use, the provision of information to duly recognized Coast Guard auxiliary organizations and personnel whose purpose is to provide morale and welfare information to members or their dependents.

EFFECTIVE DATE: June 29, 1998.

ADDRESS: Interested individuals may comment on this publication by writing to Ms. Vanester M.Williams, Privacy Act Coordinator, U.S. Department of Transportation, Office of the Chief Information Officer, S–80, 400 7th Street, SW., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Inquiries or comments concerning this

proposed altered system should be directed to Commandant (G-WR-3), ATTN: Mr. David M. Swatloski, U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC 20593-0001. If no comments are received, the proposed change will become effective on the above-mentioned date. If comments are received, the comments will be considered and where adopted, the document will be republished with the change.

SUPPLEMENTARY INFORMATION: DOT systems of records notices subject to the Privacy Act of 1974 (5 U.S.C. 552a) as amended, have been published in the **Federal Register** and are available from the above mentioned address. The specific change to the record system being amended is highlighted in *italics* below in the notice, as amended, which is being published in its entirety.

DOT/CG-623

SECURITY CLASSIFICATION:

Sensitive.

SYSTEM NAME:

Military Pay and Personnel System.

SYSTEM LOCATION:

Department of Transportation (DOT).

a. U.S. Coast Guard (CG): Department of Transportation Computer Center, 400 7th Street, SW., Washington, DC 20590-0001.

b. U.S. Coast Guard Pay and Personnel Center, 444 S.E., Quincy Street, Topeka, KS 66683-3591

c. U.S. Coast Guard: 2100 2nd Street, SW., Washington, DC 20593-0001

d. Decentralized data segments are located at the unit maintaining the individual's pay and personnel record and permanent duty unit.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

a. All Coast Guard military personnel, active duty and reserve.

b. Retired reserve Coast Guard military personnel waiting for pay at age 60.

c. Active duty National Oceanic and Atmospheric Administration [NOAA] officers.

d. Personnel separated from service in all the preceding categories.

CATEGORIES OF RECORDS IN THE SYSTEM:

All categories of records are electronic and/or paper, and may include identifying information, such as name[s], date of birth, home residence, mailing address, Social Security number, payroll information, and home telephone number. Records reflect:

a. Work experience, educational level achieved, and specialized education or training obtained in and outside of military service.

b. Military duty assignments, ranks held, pay and allowances, personnel actions such as promotions, demotions, or separations.

c. Enrollment or declination of enrollment in insurance programs.

d. Performance evaluation.

e. The individual's desires for future assignments, training requested, and notations by assignment officers.

f. Information for determinations of waivers and remissions of indebtedness to the U.S. Government.

g. Information for the purpose of validating legal requirements for garnishment of wages.

AUTHORITY FOR MAINTENANCE OF SYSTEM:

Title 37 U.S.C. as implemented in GAO Manual for Guidance of Federal Agencies, Title 2 GAO, Title 6 GAO and Title 14 U.S.C. 92(i).

PURPOSE:

This system, as described in the Summary, will be altered to include, as a Routine Use, the provision of information to duly recognized United States Coast Guard auxiliary organizations and personnel whose purpose is to provide morale and welfare information to members or their dependents.

ROUTINE USE OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

a. To the Department of Treasury for the purpose of disbursement of salary, U.S. Savings Bonds, allotments, or travel claim payments.

b. To government agencies to disclose earnings and tax information.

c. To the Department of Defense and Veterans Administration for determinations of benefit eligibility for military members and their dependents.

d. To contractors to manage payment and collection of benefit claims.

e. To the Department of Defense for manpower and readiness planning.

f. To the Comptroller General for the purpose of processing waivers and remissions.

g. To contractors for the purpose of system enhancement, maintenance, and operations.

h. To federal, state, and local agencies for determination of eligibility for benefits connected with the Federal Housing Administration programs.

i. To provide an official of another federal agency information needed in the performance of official duties to reconcile or reconstruct data files in support of functions for which the records were collected and maintained.

j. To an individual's spouse, or person responsible for the care of the individual concerned when the individual to whom the record pertains is mentally incompetent, critically ill or under other legal disability for the purpose of assuring the individual is receiving benefits or compensation they are entitled to receive.

k. To a requesting government agency, organization, or individual the home address and other relevant information on those individuals who, it is reasonably believed, might have contracted an illness, been exposed to, or suffered from a health hazard while a member of government service.

l. To businesses for the purpose of electronic fund transfers or allotted pay transactions authorized by the individual concerned.

m. To credit agencies and financial institutions for the purpose of processing credit arrangements authorized by the individual concerned.

n. To other government agencies for the purpose of earnings garnishment.

o. To prepare the Officer Register and Reserve Officer Register which is provided to all Coast Guard officers and the Department of Defense.

p. To other federal agencies and collection agencies for the collection of indebtedness and outstanding travel advances to the federal government.

q. The home mailing addresses and telephone numbers of members and their dependent's to duly appointed Family Ombudsman and personnel within the Coast Guard for the purpose of providing entitlement information to members or their dependents.

r. The home mailing addresses and telephone numbers of members and their dependent's to Coast Guard auxiliary organizations officially recognized by the Commandant whose purpose is to provide family support programs which enhance the morale and welfare of active duty Coast Guard members and their dependent's.

See Prefatory Statement of General Routine Uses; items 3 and 5 do not apply.

DISCLOSURE TO CONSUMER AGENCIES: *None.*

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

The storage is on computer disks, magnetic tape microfilm, and paper forms in file folders.

RETRIEVABILITY:

Retrieval from the system is by name or social security number and can be accessed by employees in pay and

personnel offices and other pay and personnel employees located elsewhere who have a need for the record in the performance of their duties.

SAFEGUARDS:

Computers provide privacy and access limitations by requiring a user name and password match. Access to decentralized segments are similarly controlled. Only those personnel with a need to have access to the system are given user names and passwords. The magnetic tape backups have limited access in that users must justify the need and obtain tape numbers and volume identifiers from a central source before they are provided data tapes. Paper record and microfilm records are in limited access areas in locking storage cabinets.

RETENTION AND DISPOSAL:

Leave and Earnings Statements, and pay records are microfilmed and retained on site four years, then archived at the Federal Record Center, and destroyed when 50 years old. The official copy of the personnel record is maintained in the Official Officer Service Records, DOT/CG 626 for active duty officers, the Enlisted Personnel Record System, DOT/CG 629 for active duty enlisted personnel or the Official Coast Guard Reserve Service Record, OST/CG 576 for inactive duty reservists. Duplicate magnetic copies of the pay and personnel record are retained at an off site facility for a useful life of seven years. Paper records for waivers and remissions are retained on site six years three months after the determination and then destroyed. Paper records to determine legal sufficiency for garnishment are retained on site six years three months after the member separates from the service or the garnishment is terminated and then destroyed.

SYSTEM MANAGER(S) AND ADDRESS:

a. All information on Coast Guard members other than b, c, and d, below:

(1) For active duty members of the Coast Guard: Chief, Office of Personnel, Department of Transportation, U.S. Coast Guard Headquarters, 2100 2nd Street, SW, Washington, DC 20593–0001.

(2) For Coast Guard inactive duty reserve members and retired Coast Guard reservists awaiting pay at age 60: Chief, Office of Readiness and Reserve, Department of Transportation, U.S. Coast Guard Headquarters, 2100 2nd Street, SW, Washington, DC 20593–0001.

b. For Coast Guard Waivers and Remissions: Chief, Personnel Services Division (G–PS), Office of Personnel, U.S. Coast Guard Headquarters, 2100 2nd Street, SW, Washington, DC 20590–0001.

c. For records used to determine legal sufficiency for garnishment of wages and pay records: Commanding Officer (LGL), U.S. Coast Guard Pay and Personnel Center, 444 S.E. Quincy Street, Topeka, KS 66683–3591.

For data added to the decentralized data segment the commanding officer, officer-in-charge of the unit handling the individual's pay and personnel record, or Chief, Administrative Services Division for individuals whose records are handled by Coast Guard Headquarters.

e. For NOAA members: Commissioned Personnel Center, National Oceanic and Atmospheric Administration, 1315 East-West Highway, Room 12100, Silver Spring, MD 20910–3282.

NOTIFICATION PROCEDURE:

Inquiries should be directed to:

a. For all information on Coast Guard members other than b., c., and d. below: Department of Transportation, U.S. Coast Guard Headquarters (G–SII), 2100 2nd Street, SW, Washington, DC 20593–0001.

b. For records used to determine legal sufficiency for garnishment of wages and pay records: Commanding Officer, U.S. Coast Guard Pay and Personnel Center, 444 S.E. Quincy Street, Topeka, KS 66683–3591.

For data added to the decentralized data segment: The commanding officer or officer-in-charge of the unit handling the individual's pay and personnel record, or Chief, Administrative Services Division for individuals whose records are handled by Coast Guard Headquarters. Addresses for the units handling the individual's pay and personnel record are available from the individual's commanding officer.

d. For all information on NOAA members: Commissioned Personnel Center, National Oceanic and Atmospheric Administration, 1315 East-West Highway, Room 12100, Silver Spring, MD 20910–3282.

RECORD ACCESS PROCEDURES:

Contact the addressee under notification procedures and specify the exact information you desire. Requests must include the full name and social security number of the individual concerned. Prior written notification of personal visits is required to ensure that the records will be available at the time of visit. Photographic proof of identity will be required prior to release of records. A military identification card, drivers license, or similar document will be considered suitable identification.

CONTESTING RECORD PROCEDURES:

Contact the addressee under notification procedures and specify the exact information or items you are contesting and provide any documentation that justifies your claim. Correspondence contesting records must include the full name and Social Security Number of the individual concerned.

RECORD SOURCE CATEGORIES:

a. The individual's record from the following systems of records:

(1) Official Officer Service Records, DOT/CG 626

(2) Enlisted Personnel Record System, DOT/CG 629

(3) Official Coast Guard Reserve Service Record, DOT/CG 676.

Information is obtained from the individual, Coast Guard personnel officials, National Oceanic and Atmospheric Administration personnel officials, and the Department of Defense.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

Dated: May 18, 1998.

Eugene K. Taylor, Jr.,

Office of the Chief Information Officer, Department of Transportation.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent To Rule on Application To Impose and Use the Revenue From a Passenger Facility Charge (PFC) at the Phoenix Sky Harbor International Airport, Phoenix, Arizona

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent to rule on application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Phoenix Sky Harbor International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508 as recodified by Title 49 U.S.C. 40117(c)(3)) and Part 158 of the Federal Aviation Regulations (14 CFR, Part 158).

DATES: Comments must be received on or before June 22, 1998.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address: Federal Aviation Administration Airports Division, P.O. Box 92007, Worldway Postal Center, Los Angeles, CA 90009.

In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Mr. Neilson A. Bertholf, Jr., Aviation Director, City of Phoenix, 3400 Sky Harbor Blvd., Phoenix, AZ 85034–4420.

Air carriers and foreign air carriers may submit copies of written comments previously provided to the city of Phoenix under section 158.23 of FAR Part 158.

FOR FURTHER INFORMATION CONTACT: Mr. John P. Milligan, Supervisor, Standards Section, Airports Division, 15000 Aviation Blvd., Lawndale, CA 90261, Telephone: (310) 725–3621. The application may be reviewed in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at the Phoenix Sky Harbor International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508 as recodified by Title 49 U.S.C. 40117 (c)(3)) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

On April 30, 1998, the FAA determined that the application to impose and use the revenue from a PFC submitted by the city of Phoenix was substantially complete within the requirements of section 158.25 of Part 158. The FAA will approve or disapprove the application, in whole or in part, no later than July 30, 1998.

The following is a brief overview of application No. 98–05–C–00–PHX.

Level of the Proposed PFC: $3.00.

Proposed Charge Effective Date: October 1, 1998.

Proposed Charge Expiration Date: March 1, 2002.

Total Estimated PFC Revenue: $193,445,920.

Brief description of the proposed projects:

Construct Aircraft Rescue Firefighting Facility (ARFF); Reconstruct Runways 8L/26R and 8R/26L in Concrete; Expand Terminal 4 Facilities; Construct New Taxiway from Taxiway G to the South; Reconstruct Taxiway C in Concrete; Upgrade Aircraft Rescue Firefighting Facility #19; Procure New ARFF Vehicle; Reconstruct Terminal 2 Ramp; Construct Midfield, North/South Taxiway T; Upgrade Airfield Guidance Sign System; Reconstruct Taxiway S; Construct Terminal 4 Holding Apron; Upgrade Airfield Security System.

Class or classes of air carriers which the public agency has requested not be required to collect PFCs: ATCO, Air Taxi/Commercial Operators: CAC, Commuters or Small Certificated Air Carriers with less than 7,500 enplanements each annually: CRAC, Large Certificated Route Air Carriers providing non-scheduled service with less than 7,500 enplanements each annually.

Any person may inspect the application in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT**. In addition, any person may, upon request, inspect the application, notice, and other documents germane to the application, in person at the city of Phoenix Aviation Department.

Issued in Hawthorne, California, on May 1, 1998.

Herman C. Bliss,

Manager, Airports Division, Western-Pacific Region.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent to Rule on Application (98–03–C–00–HTS) to Impose and use the revenue from a passenger facility charge (PFC) at Tri-State Airport, Huntington, West Virginia

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Intent to Rule on Application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Tri-State Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) Pub. L. 101–508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

DATES: Comments must be received on or before June 22, 1998.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address:

Mr. Elonza Turner, Beckley Airports Field Office, Main Terminal building, 176 Airport Circle, Beaver, West Virginia 25813–9350.

In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Mr. Larry G. Salyers, Airport Director of the Tri-State Airport Authority at the following address:

Tri-State Airport Authority, 1449 Airport Road, Unit 1, Box, Huntington, West Virginia 26505.

Air carriers and foreign air carriers may submit copies of written comments previously provided to the Tri-State Airport Authority under section 158.23 of Part 158.

FOR FURTHER INFORMATION CONTACT: Mr. Elonza Turner, Beckley Airports Field Office, Main Terminal Building 176 Airport Circle, Beaver, West Virginia 25813–9350 (Tel. 304–252–6216). The application may be reviewed in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Tri-State Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

On April 10, 1998, the FAA determined that the application to impose and use the revenue from a PFC submitted by the Tri-State Airport Authority was substantially complete within the requirements of section 158.25 of Part 158. The FAA will approve or disapprove the application, in whole or in part, no later than July 8, 1998.

The following is a brief overview of the application.

Application number: 98–03–C–00–HTS.

Level of the proposed PFC: $3.00.

Proposed charge effective date: July 1, 1998.

Proposed charge expiration date: August 1, 2000.

Total estimated PFC revenue: $365,138.

Brief description of proposed projects: The PFC funds will be utilized to fund the local share of the following proposed AIP project.

—Design Snow Removal Equipment Building
—Acquire Aircraft Deicing Truck
—Acquire 4-Wheel Drive Pick-up With Snow Plow
—Acquire Security Vehicle
—Acquire Self Propelled Passenger Access Lift
—Construct Snow Equipment Building
—Conduct Drainage/Deicing study
—Reseal/Rehabilitate Airline Ramp

—Drainage Rehabilitation

Class or classes of air carriers which the public agency has requested not be required to collect PFCs: Non-Scheduled Part 135 and Part 121 charter operators.

Any person may inspect the application in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT** and at the FAA regional Airports office located at:

Fitzgerald Federal Building, John F. Kennedy International Airport, Jamaica, New York, 11430.

In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the Tri-State Airport Authority.

Issued in Jamaica, New York on May 15, 1998.

Thomas Felix,

Manager, Planning & Programming Branch, Eastern Region.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Amtrak Reform Council; Notice of First Meeting

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of First Meeting of the Amtrak Reform Council.

SUMMARY: As provided in Section 203 of the Amtrak Reform and Accountability Act of 1997, the Federal Railroad Administration (FRA) gives notice of the first meeting of the Amtrak Reform Council ("ARC"). The purpose of the meeting is to begin to develop a work plan for the ARC, to establish certain administrative procedures, including a process for selection of a chair, and to begin to review Amtrak's current financial and operational structure.

DATES: The first meeting of the ARC is scheduled for 11:00 a.m. to 2:00 p.m. EST on Tuesday, May 26, 1998. Decisions regarding future meetings will be made at the first meeting and from time to time thereafter.

ADDRESSES: The first meeting of the ARC will be held in Room 283 in the Hall of States at 444 North Capitol Street, NW, Washington, DC. The meeting is open to the public on a first-come, first-served basis and is accessible to individuals with disabilities. Persons in need of special arrangements should contact the person whose name is listed below.

FOR FURTHER INFORMATION CONTACT: Arrigo Mongini, Deputy Associate Administrator for Railroad Development, FRA, RDV–2, Mail Stop 20, 400 Seventh Street, SW, Washington, DC 20590 (mailing address only) or by telephone at (202) 632–3286.

SUPPLEMENTARY INFORMATION: The ARC was created by the Amtrak Reform and Accountability Act of 1997 (ARAA) as an independent commission to evaluate Amtrak's performance and make recommendations to Amtrak for achieving further cost containment and productivity improvements, and financial reforms. In addition, the ARAA requires: that the ARC monitor cost savings resulting from work rules established under new agreements between Amtrak and its labor unions; that the ARC provide an annual report to Congress that includes an assessment of Amtrak's progress on the resolution of productivity issues; and that after two years the ARC begin to make findings on whether Amtrak can meet certain financial goals and, if not, to notify the President and the Congress.

The ARAA provides that the ARC consist of eleven members, including the Secretary of Transportation and ten others nominated by the President or Congressional leaders. Each member is to serve a 5 year term.

Issued in Washington, D.C. on May 19, 1998.

Donald M. Itzkoff,

Deputy Administrator.

Surface Transportation Board

[STB Finance Docket No. 33556[1] et al.]

Railroad Operation, Acquisition, Construction, Etc: Canadian National Railway Co. et al.

AGENCY: Surface Transportation Board.

ACTION: Decision No. 3 in STB Finance Docket No. 32760 (Sub-No. 26) and Decision No. 3 in STB Finance Docket No. 33556; Denial of general waiver.

SUMMARY: The Surface Transportation Board (Board) is denying petitions for reconsideration in these proceedings of the requirement that parties submit copies of all textual materials on diskettes (disks) or compact discs (CDs). Parties may, however, seek individual waivers of the disk filing requirement.

FOR FURTHER INFORMATION CONTACT: Julia M. Farr, (202) 565–1613. [TDD for the hearing impaired: (202) 565–1695.]

SUPPLEMENTARY INFORMATION: On March 26, 1998, Joseph C. Szabo, for and on behalf of the United Transportation Union—Illinois Legislative Board (UTUIL), filed a petition for reconsideration of Decision No. 2 in the STB Finance Docket No. 33556 proceeding served and published in the **Federal Register** on March 13, 1998 (63 FR 12574).[2] On April 20, 1998, UTU Committees[3] filed a petition for reconsideration of Decision No. 1 in the STB Finance Docket No. 32760 (Sub-No. 26) proceeding (formerly Decision No. 12 in STB Finance Docket No. 32760 (Sub-No. 21)), which was served on March 31, 1998, and published in the **Federal Register** on April 3, 1998 (63 FR 16628).[4] The petitions are nearly identical and will be considered together. UTU Committees seek reconsideration of the requirement in these proceedings that all parties submit copies of their textual materials on 3.5 inch IBM-compatible disks or CDs.[5]

[1] These proceedings are not consolidated. A single decision is being issued for administrative convenience only. In addition, this oversight matter was recently assigned the Sub-No. 26 docket number and a new case title.

[2] In that decision the Board announced, *inter alia*, that, pursuant to 49 CFR 1180.4(b), Canadian National Railway Company (CNR), Grand Trunk Corporation, and Grand Trunk Western Railroad Incorporated (GTW), Illinois Central Corporation (IC Corp.), Illinois Central Railroad Company (ICR), Chicago, Central and Pacific Railroad Company, and Cedar River Railroad Company (collectively, applicants) had notified us of their intent to file an application seeking authority under 49 U.S.C. 11323–25 for the acquisition of control, by CNR, through its indirect wholly owned subsidiary Blackhawk Merger Sub, Inc., of IC Corp., and through it of ICR and its railroad affiliates, and for the resulting common control by CNR of GTW and its railroad affiliates and ICR and its railroad affiliates. The Board found this to be a major transaction as defined in 49 CFR part 1180.

[3] In what is now STB Finance Docket No. 32760 (Sub-No. 26), the petition for reconsideration was filed by UTU–IL, and by United Transportation Union-General Committee of Adjustment (GO–386), United Transportation Union-General Committee of Adjustment (GO–401), and United Transportation Union-General Committee of Adjustment (ALS). We will refer to the petitioners in both proceedings collectively as UTU Committees.

[4] In that decision, the Board instituted a proceeding as part of the 5-year oversight condition that it imposed in *Union Pacific Corporation, Union Pacific Railroad Company, and Missouri Pacific Railroad Company—Control and Merger—Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and The Denver and Rio Grande Western Railroad Company*, Finance Docket No. 32760 (*UP/SP Merger*), Decision No. 44 (STB served Aug. 12, 1996), to examine additional remedial conditions to the UP/SP merger as they pertain to rail service in the Houston, Texas/Gulf Coast region.

[5] In Decision No. 2 at 3 and Decision No. 1 at 3, we directed that:

[i]n addition to submitting an original and 25 copies of all paper documents filed with the Board, the parties shall also submit, on diskettes or

Applicants in STB Finance Docket No. 33556 filed a reply opposing the relief sought by UTU Committees.

We stated in Decision No. 2 and Decision No. 1 that the submission of computer data on disks and CDs was needed for the efficient review of filings by the Board and our staff. We found that the disk/CD requirement superseded for these proceedings the otherwise applicable electronic filing requirements in *Expedited Procedures for Processing Rail Rate Reasonableness, Exemption and Revocation Proceedings*, STB Ex Parte No. 527 (STB served Oct. 1, 1996 and Nov. 15, 1996), *aff'd sub nom. United Transp. Union—Ill. Legis. Bd.* v. *STB et al.*, 132 F.3d 71 (D.C. Cir. 1998) (Ex Parte No. 527) and codified at 49 CFR 1104.3(a). Those rules require parties to submit computer disks for pleadings of 20 or more pages and for spreadsheets.[6]

UTU Committees contend that mandating that all textual material be filed on disks constitutes material error. They argue that, by superseding the applicable disk rule at 49 CFR 1104.3(a), our disk/CD requirement in STB Finance Docket Nos. 32760 (Sub-No. 26) and 33556 precludes meaningful participation in those cases by railroad employees as well as the general public. They allege that many railway employees do not have access to computers, and they would not be able to provide copies of disks to the many parties likely to participate in the proceeding.[7] They argue, moreover, that the burdens on local labor units will prevent them from actively participating, which, they assert, would be a denial of due process.

UTU Committees also claim that the requirements of Decision No. 2 and Decision No. 1 are inconsistent with the Ex Parte No. 527 procedures because disks will contain more rather than less information than the paper filings, and they are required for all filings, not just lengthy ones. They also contend that there is no waiver provision for the Decision No. 2 and Decision No. 1 disk/CD requirement. UTU Committees ask that we reconsider the mandatory disk requirement and restore application of the section 1104.3 rule.[8]

Finally, UTU Committees argue that the Board may have always intended that there be an absolute disk requirement, and "the 20-page rule may have been merely an interim scheme to promote such a result." It also claims that the real reason for the rule is to inhibit participation by employees and "to curry favor with carriers * * *."

In response to UTU Committee's petition, applicants in STB Finance Docket No. 33556 assert that the effort and expense needed to create a disk is minimal whether the submission is lengthy or less than 20 pages. Further, they assert that where a party does not have access to a word processor, it should file an individual request for a waiver.

Discussion and Conclusions

We will deny the petitions for reconsideration, but we will permit individual parties to seek a waiver of the disk/CD requirement. With this safeguard, we believe that the need to efficiently and expeditiously analyze the anticipated large number of filings outweighs the burden on parties of filing disks.

While the disk/CD requirement in these proceedings broadens the regulation issued in Ex Parte No. 527, we believe that its purpose and its procedures are compatible with the 20-page rule. The Board issued the 20-page rule to assist the agency in its "task of reviewing and analyzing voluminous records." October 1 decision at 2–3. In the context of that rule, "voluminous" referred to the length of the filing. Nevertheless, in situations such as merger proceedings where the *number* of pleadings can also be described as voluminous and where decisions must be issued promptly, we believe that imposing the disk requirement for all paper filings will enable the Board and our staff to efficiently review case filings.[9] The 20-page rule is not an "interim scheme," but the STB Finance Docket No. 33556 merger and the UP/SP Houston/Gulf Coast Oversight by their natures have made us more dependent on electronic media.[10] The use of disk/CDs in STB Finance Docket No. 33556 will help us reach a decision on the merits within the applicable statutory deadlines (*see* 49 U.S.C. 11325), and, in STB Finance Docket No. 32760 (Sub-No. 26), their use will assist us in issuing a decision as soon as possible after the record closes. Utilizing disks is consistent with the practice we have followed in other recent mergers where we "encouraged" or "requested" the filing of disks.[11]

We also believe that submitting a disk does not constitute a hardship, unless the party does not have access to a word processor or there is some other reason why filing would be difficult.[12] In those situations, consistent with Ex Parte No. 527, such parties may seek a waiver of the disk filing requirement.[13] UTU Committees contend that, while under 49 CFR 1110.9, any person may seek a waiver of a rule, the disk/CD requirement in this proceeding is not a "rule" and thus a waiver is not available. We note, however, that, under 49 CFR 1100.3, our rules are to be

---

compact discs, copies of all textual materials * * *. Data must be submitted on 3.5 inch IBM-compatible floppy diskettes or compact discs.

Parties were also directed to submit "electronic workpapers, data bases, and spreadsheets" on disks or CDs. We also stated that a copy of each disk or CD should be given to any other party upon request.

[6] Section 1104.3 reads in relevant part:

(a) * * * In addition to the paper copies required to be filed with the Board, 3 copies of:

(1) Textual submissions of 20 or more pages; and

(2) All electronic spreadsheets should be submitted on 3.5 inch, IBM compatible formatted diskettes or QIC–80 tapes. Textual materials must be in WordPerfect 5.1 format, and electronic spreadsheets must be in LOTUS 1–2–3 release 5 or earlier format. One copy of each such computer diskette or tape submitted to the Board should, if possible, be provided to any other party requesting a copy.

[7] We note that, under our Decision No. 2 and Decision No. 1 procedures, electronic copies are provided only upon request of another party, and under 49 CFR 1104.3, the requested disks are only provided to other parties "if possible."

[8] UTU Committees also request that, if the waiver provision is available, that the Board waive the disk/CD requirement and reinstate the 20-page disk rule.

[9] While STB Finance Docket No. 32760 (Sub-No. 26) is not a merger proceeding but a merger oversight case, we still anticipate a large number of filings, and we must issue a decision in as timely manner as possible.

[10] For these reasons, the assertion that the disk requirement was intended to prevent participation by employees or to win the favor of railroads is baseless.

[11] See *Union Pacific Corporation, Union Pacific Railroad Company, and Missouri Pacific Railroad Company—Control and Merger—Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and The Denver and Rio Grande Western Railroad Company*, Finance Docket No. 32760 (STB served Sept. 1, 1995); *CSX Corporation and CSX Transportation, Inc., Norfolk Southern Corporation and Norfolk Southern Railway Company—Control and Operating Leases/Agreements—Conrail Inc. and Consolidated Rail Corporation*, STB Finance Docket No. 33388 (STB served May 30, 1997); and *Burlington Northern Inc. and Burlington Northern Railroad Company—Control and Merger—Santa Fe Pacific Corporation and The Atchison, Topeka and Santa Fe Railway Company*, Finance Docket No. 32549 (STB served Aug. 5, 1994).

[12] In STB Finance Docket No. 32760 (Sub-No. 26), UTU Committees claim that not only railroad employees, but "other public parties" would be harmed by requiring disks. They contend that a majority of such parties did not file disks in response to the decision in *Review of Rail Access and Competition Issues*, STB Ex Parte No. 575 (STB served Mar. 20, 1998). We believe that the disk filing requirement is reasonable. No other party has objected to it. Moreover, as discussed *infra*, the ability to file a waiver request should ameliorate any harm.

[13] The Court in Ex Parte No. 527 stated that "UTU complains that the waiver rule denies due process to the union and to rail employees who do not have the necessary computer equipment or expertise to submit a disk * * *. We do not doubt, therefore, that the availability of the waiver provision adequately protects a party for whom compliance with the rule would be burdensome." 132 F.3d at 75.

liberally construed "to secure just, speedy, and inexpensive determination of the issues presented." Accordingly, any person may seek a waiver of the disk/CD requirement in these proceedings. Parties should file the waiver request with the paper version of its filing, and we can rule upon the waiver even after the filing date.[14]

Finally, we are not sure how UTU Committees' argument that disks can contain more information than paper filings relates to the issue of the hardship of filing disks. In any event, in Decisions No. 1 and 2, we required that "copies of all textual materials" are to be submitted on disks. These disks are the electronic version or counterpart of the textual paper filing. The paper copy remains the official record. Thus, for the reasons discussed above, we are denying the petitions for reconsideration.

Board decisions and notices are available on our website at "WWW.STB.DOT.GOV."

This action will not significantly affect either the quality of the human environment or the conservation of energy resources.

It is ordered:

1. UTU Committees' petitions for reconsideration are denied. Parties may individually seek a waiver from the disk/CD requirement.

2. This decision is effective on the service date.

Decided: May 14, 1998.

By the Board, Chairman Morgan and Vice Chairman Owen.

Vernon A. Williams,

Secretary.

[FR Doc. 98–13776 Filed 5–21–98; 8:45 am]

BILLING CODE 4915–00–P

[14] As noted, UTU Committees indicate that, if the waiver provision is available, it seeks to have us waive the disk/CD requirement. We are not sure whether this request is being made on behalf of UTU Committees, local units, or individual railroad employees, or some combination of the above. UTU Committees maintain that in many cases railway employees lack access to computers. In those instances where this is true, there would appear to be valid grounds for a waiver, but each situation is best addressed on its own merits.

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[STB Finance Docket No. 32760 (Sub–No. 26 [1])[2]]

Union Pacific Corporation, Union Pacific Railroad Company, and Missouri Pacific Railroad Company; Control and Merger; Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and the Denver and Rio Grande Western Railroad Company; Houston/Gulf Coast Oversight

AGENCY: Surface Transportation Board.

ACTION: Corrected Decision; Decision No. 1; Notice of Houston/Gulf Coast Oversight Proceeding. Requests for Additional Conditions to the UP/SP Merger for the Houston, Texas/Gulf Coast Area.

SUMMARY: Pursuant to a petition filed February 12, 1998, by the Texas Mexican Railway Company and the Kansas City Southern Railway Company (Tex Mex/KCS) and a request filed March 6, 1998, by the Greater Houston Partnership (GHP), the Board is instituting a proceeding as part of the 5-year oversight condition that it imposed in Union Pacific Corporation, Union Pacific Railroad Company, and Missouri Pacific Railroad Company—Control and Merger—Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SCPSL Corp., and The Denver and Rio Grande Western Railroad Company, Finance Docket No. 32760 (UP/SP Merger), Decision No. 44 (STB served Aug. 12, 1996), to examine their requests, and others that may be made, for additional remedial conditions to the UP/SP merger as they pertain to rail service in the Houston, Texas/Gulf Coast region. The Board is establishing a procedural schedule (attached) for the submission of evidence, replies, and rebuttal. The Board requests that persons intending to participate in this oversight proceeding notify the agency of that intent. A separate service list will be issued based on the notices of intent to participate that the Board receives.

DATES: The proceeding will commence on June 8, 1998. On that date, all interested parties must file requests for new remedial conditions to the UP/SP merger regarding the Houston/Gulf Coast area, along with all supporting evidence. The Board will publish a notice of acceptance of requests for new conditions in the **Federal Register** by July 8, 1998. Notices of intent to participate in the oversight proceeding are due July 22, 1998. All comments, evidence, and argument opposing the requested new conditions are due August 10, 1998. Rebuttal in support of the requested conditions is due September 8, 1998. The full procedural schedule is set forth at the end of this decision.

ADDRESSES: An original plus 25 copies [3] of all documents, referring to STB Finance Docket No. 32760 (Sub-No. 26), must be sent to the Office of the Secretary, Case Control Unit, ATTN: STB Finance Docket No. 32760 (Sub-No. 26), Surface Transportation Board, 1925 K Street, N.W., Washington, DC 20423–0001.

Electronic Submissions. In addition to an original and 25 copies of all paper documents filed with the Board, the parties shall also submit, on 3.5 inch IBM-compatible diskettes or compact discs, copies all textual materials, electronic workpapers, data bases and spreadsheets used to develop quantitative evidence. Textual material must be in, or convertible by and into, WordPerfect 7.0. Electronic spreadsheets must be in, or convertible by and into, Lotus 1–2–3 97 Edition, Excel Version 7.0, or Quattro Pro Version 7.0.

The data contained on the diskettes or compact discs submitted to the Board may be submitted under seal (to the extent that the corresponding paper copies are submitted under seal), and will be for the exclusive use of Board employees reviewing substantive and/or procedural matters in this proceeding. The flexibility provided by such computer data is necessary for efficient review of these materials by the Board

[1] This decision corrects the decision served March 31, 1998, and published in the **Federal Register** on April 3, 1998 (63 FD 16628) by designating the docket number for this, the Houston/Gulf Coast Oversight proceeding, as Finance Docket No. 32760 (Sub-No. 26), rather than (Sub-No. 21); designating this decision as Decision No. 1; and designating the short name of this proceeding as HOUSTON/GULF COAST OVERSIGHT. All other aspects of the corrected decision remain unchanged, including the procedural schedule.

[2] This decision embraces the proceeding in Finance Docket No. 32760, Union Pacific Corporation, Union Pacific Railroad Company, and Missouri Pacific Railroad Company—Control and Merger—Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and The Denver and Rio Grande Western Railroad Company.

[3] In order for a document to be considered a formal filing, the Board must receive an original plus 25 copies of the document, which must show that it has been properly served. As in the past, documents transmitted by facsimile (FAX) will not be considered formal filings and thus are not acceptable.

and its staff. The electronic submission requirements set forth in this decision supersede, for the purposes of this proceeding, the otherwise applicable electronic submission requirements set forth in our regulations. See 49 CFR 1104.3(a), as amended in Expedited Procedures for Processing Rail Rate Reasonableness, Exemption and Revocation Proceedings, STB Ex Parte No. 527, 61 FR 52710, 711 (Oct. 8, 1996), 61 FR 58490, 58491 (Nov. 15, 1996).[4]

FOR FURTHER INFORMATION CONTACT: Joseph H. Dettmar, (202) 565–1600. [TDD for the hearing impaired: (202) 565–1695.]

SUPPLEMENTARY INFORMATION: In UP/SP Merger, Decision No. 44, served August 12, 1996, the Board approved the common control and merger of the rail carriers controlled by Union Pacific Corporation (Union Pacific Railroad Company and Missouri Pacific Railroad Company) and the rail carriers controlled by Southern Pacific Rail Corporation (Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and the Denver and Rio Grande Western Railroad Company) (collectively UP/SP), subject to various conditions. Common control was consummated on September 11, 1996. The Board imposed a 5-year oversight condition to examine whether the conditions imposed on the merger effectively addressed the competitive concerns they were intended to remedy, and retained jurisdiction to impose, as necessary, additional remedial conditions if the Board determined that the conditions already imposed were shown to be insufficient. In its initial oversight proceeding, the Board concluded that, while it was still too early to tell, there was no evidence at the time that the merger, with the conditions that the agency had imposed, had caused any adverse competitive consequences.[5] Nevertheless, the Board indicated that its oversight would be ongoing, and that it would continue vigilant monitoring.[6]

UP/SP has experienced serious service difficulties since the merger, and the Board has issued a series of orders under 49 U.S.C. 11123, effective through August 2, 1998, to mitigate a rail service crisis in the western United States caused, in large measure, by severely congested UP/SP lines in the Houston/Gulf Coast region.[7] In acting to relieve some of the congestion, the Board made substantial temporary changes to the way in which service is provided in and around Houston.[8] The Board found that, although merger implementation issues were involved, a key factor in bringing about the service emergency was the inadequate rail facilities and infrastructure in the region, and, as such, also ordered UP/SP, BNSF, and other involved railroads to submit to the Board their plans to remedy these inadequacies.[9]

Recognizing the limitations on its authority under the emergency service provisions of the law, the Board rejected proposals offered by certain shipper, carrier, and governmental interests in the Service Order No. 1518 proceeding to force UP/SP to transfer some of its lines to other rail carriers and effect a permanent alteration of the competitive situation in the Houston region; it adopted instead only those measures designed to facilitate short-term solutions to the crisis that did not further aggravate congestion in the area or create additional service disruptions. The Board declared, however, that interested persons could present proposals for longer-term solutions to the service situation—including those seeking structural industry changes based on perceived competitive inadequacies—in formal proceedings outside of section 11123, particularly in the UP/SP merger oversight process.[10] Tex Mex/KCS has now requested that we invoke our oversight jurisdiction over the merger for the purpose of considering such proposals, including the transfer to it of various UP/SP lines and yards in Texas.[11] GHP has also requested the Board's intervention to provide for Houston's long-term rail service needs, including the establishment of a neutral switching operation.

That the service emergency in the Houston/Gulf Coast region remains ongoing is well known.[12] Given these circumstances, the Board will invoke its oversight jurisdiction over the UP/SP merger to consider new conditions to the merger of the kind proposed here, and others that may be made. We note that no party as yet has seriously suggested that SP's inadequate infrastructure would not have produced severe service problems in the Houston/Gulf Coast area even if there had been no merger. Nonetheless, the Board believes that, given the gravity of the service situation, it should thoroughly explore anew the legitimacy and viability of longer-term proposals for new conditions to the merger as they pertain to service and competition in that region.

UP/SP and BNSF argue that Tex Mex/KCS' request for conditions that have been previously rejected, without any new evidentiary justification, is insufficient grounds for the Board to begin a new oversight proceeding. We disagree. Our 5-year oversight of the UP/SP merger is not a static process, but a continuing one, so that the Board's prior rejection of Tex Mex/KCS' or any other party's requested conditions—whether in the Board's approval of the merger or in a subsequent oversight proceeding—does not preclude their fresh consideration now. Through our oversight condition, we have retained jurisdiction to monitor the competitive consequences of this merger; to re-examine whether our imposed conditions have effectively addressed the consequences they were intended to remedy; and to impose additional

---

[4] A copy of each diskette or compact disc submitted to the Board should be provided to any other party upon request.

[5] Union Pacific Corporation, Union Pacific Railroad Company and Missouri Pacific Railroad Company—Control and Merger—Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and The Denver and Rio Grande Western Railroad Company, Finance Docket No. 32760 (Sub-No. 21), Decision No. 10 (STB served Oct. 27, 1997) (UP/SP Oversight).

[6] UP/SP Oversight, Decision No. 10, at 2–3.

[7] STB Service Order No. 1518, *Joint Petition for Service Order* (Service Order No. 1518) (STB served Oct. 31 and Dec. 4, 1997, and Feb. 17 and 25, 1998).

[8] The Board directed UP/SP to release shippers switched by the Houston Belt & Terminal Railway Company (HB&T) or the Port Terminal Railroad Association (PTRA) from their contracts so that they could immediately route traffic over the Burlington Northern and Santa Fe Railway Company (BNSF) or Tex Mex, in addition to UP/SP. The agency also directed UP/SP to permit BNSF and Tex Mex to modify their operations over UP/SP lines to minimize congestion over UP/SP's "Sunset Line," to move traffic around Houston rather than going through it, and to have full access to UP/SP's Spring, TX dispatching facility as neutral observers. More generally, the Board required UP/SP to cooperate with other railroads and to accept assistance from other railroads able to handle UP/SP traffic.

UP/SP and BNSF recently have agreed to make other changes designed to improve service. In particular, the carriers have agreed to joint ownership of the Sunset Line between Avondale (New Orleans), LA and Houston; joint dispatching in the Houston area; and overhead trackage rights for UP/SP over the BNSF line between Beaumont and Navasota, TX.

[9] Service Order No. 1518, Feb. 17, 1998 decision, at 5–7; Feb. 25, 1998 decision, at 5. The railroads' plans are due May 1, 1998; replies are due June 1.

[10] Service Order No. 1518, Feb. 17, 1998 decision, at 8; see also Feb. 25, 1998 decision, at 4.

[11] The Railroad Commission of Texas (RCT) has previously announced its intent to seek similar relief. See Service Order No. 1518, Feb. 17, 1998 decision, at 8.

[12] In its progress report of March 9, 1998, UP/SP announced that it would take drastic action in 30 days—including the refusal of new business and the transfer of existing business to its competitors—if the steps it has taken to deal with the emergency are not successful. On March 24, 1998, the carrier announced an embargo of a significant portion of its southbound traffic destined for the Laredo, TX gateway to clear a backlog of 5,500 cars waiting to cross into Mexico.

remedial conditions if those previously afforded prove insufficient, including, if necessary, divestiture of certain of the merged carriers' property.

The virtual shutdown of rail service in the Houston/Gulf Coast area that occurred after the UP/SP merger—and which, after many months, has yet to be normalized—is unprecedented. In our judgment, those circumstances alone are sufficient for the Board to commence this proceeding now. Clearly, our 5-year oversight jurisdiction permits us to examine—and, if necessary, re-examine at any time during this period—whether there is any relationship between the market power gained by UP/SP through the merger and the failure of service that has occurred here, and, if so, whether the situation should be addressed through additional remedial conditions. UP/SP Merger, Decision No. 44, at 100.

We caution, however, that we will not impose conditions requiring UP/SP to divest property that would substantially change the configuration and operations of its existing network in the region in the absence of the type of presentation and evidence required for "inconsistent applications" in a merger proceeding; *i.e.*, parties must present probative evidence that discloses "the full effects of their proposals." UP/SP Merger, Decision No. 44, at 157. Divestiture is only available "when no other less intrusive remedy would suffice," and we will impose it only upon sufficient evidentiary justification. *Id.*

The Board will confine this proceeding under its continuing oversight jurisdiction to examining requests for new conditions to the merger relating to rail service in the Houston/Gulf Coast area. As we have noted, the service crisis in this region, and its significant impact on the regional economy, clearly warrant our discrete treatment of these matters now. As a result, the procedures set forth here will be separate from those in the more general oversight proceeding that, pursuant to UP/SP Oversight, Decision No. 10, will begin July 1, 1998.[13]

As set forth in the attached schedule, parties that wish to request new remedial conditions to the UP/SP merger as they pertain to the Houston/Gulf Coast region must file them, along with their supporting evidence, by June 8, 1998.[14] The Board will publish a notice in the **Federal Register** accepting such requests by July 8, 1998. Any person who intends to participate actively in this facet of oversight as a "party of record" (POR) must notify us of this intent by July 22, 1998. In order to be designated a POR, a person must satisfy the filing requirements discussed above in the **ADDRESSES** section. We will then compile and issue a final service list.

Copies of decisions, orders, and notices will be served only on those persons designated as POR, MOC (Members of Congress), and GOV (Governors) on the official service list. Copies of filings must be served on all persons who are designated as POR. We note that Members of the United States Congress and Governors who are designated MOC and GOV are not parties of record and they need not be served with copies of filings; however, those who are designated as a POR must be served with copies of filings. All other interested persons are encouraged to make advance arrangements with the Board's copy contractor, DC News & Data, Inc. (DC News), to receive copies of Board decisions, orders, and notices served in this proceeding. DC News will handle the collection of charges and the mailing and/or faxing of decisions to persons who request this service. The telephone number for DC News is: (202) 289–4357.

A copy of this decision is being served on all persons designated as POR, MOC, or GOV on the service list in Finance Docket No. 32760 (Sub-No. 21). This decision will serve as notice that persons who were parties of record in the previous oversight proceeding (leading to Decision No. 10) will not automatically be placed on the service list as parties of record for this facet of oversight unless they notify us of their intent to participate further.

Finally, while the requested remedial conditions (and those reasonably anticipated from other parties) could, if imposed, result in a transfer of ownership of certain UP/SP rail property or changes in the way that such properties are operated, they appear unlikely to produce the kind of significant operational changes that, under 49 CFR 1105.6(b)(4), require the filing of a preliminary draft environmental assessment (PDEA).

This action will not significantly affect either the quality of the human environment or the conservation of energy resources.

Decided: March 30, 1998.

By the Board, Chairman Morgan and Vice Chairman Owen.

Vernon A. Williams,

Secretary.

Procedural Schedule

June 8, 1998
Requests for new remedial conditions (with supporting evidence) filed.

July 8, 1998
Board notice of acceptance of requests for new conditions published in the **Federal Register**.

July 22, 1998
Notice of intent to participate in proceeding due.

August 10, 1998
All comments, evidence, and argument opposing requests for new remedial conditions to the merger due. Comments by U.S. Department of Justice and U.S. Department of Transportation due.

September 8, 1998
Rebuttal evidence and argument in support of requests for new conditions due.

The necessity of briefing, oral argument, and voting conference will be determined after the Board's review of the pleadings.

[FR Doc. 98–13775 Filed 5–21–98; 8:45 am]

BILLING CODE 4910–00–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[STB Docket No. AB–167 (Sub–No. 1183X)]

Consolidated Rail Corporation; Abandonment Exemption; in Philadelphia County, PA

Consolidated Rail Corporation (Conrail) has filed a notice of exemption under 49 CFR 1152 Subpart F—*Exempt Abandonments* to abandon a 0.42-mile portion of the Berks Street Industrial Track between milepost 2.98± and milepost 3.40±, in the City of

[13] In Decision No. 10, at 18–19, the Board provided that general oversight would commence July 1 upon the filing by UP/SP and BNSF of their quarterly merger progress reports accompanied by comprehensive summary presentations. We provided that, as part of that proceeding, UP/SP and BNSF must make their 100% traffic tapes available by July 15, 1998; that comments of interested parties concerning oversight issues are due August 14, 1998; and that replies are due September 1, 1998. The general oversight proceeding will continue as planned.

[14] Tex Mex/KCS stated that it would file its supporting evidence 45 days after its petition. Petition at 5. If it does so, it need not file its evidence anew on June 8th, although it may supplement its filing as appropriate. We decline, however, petitioner's request (Petition at 11 n.6) to incorporate by reference its pleadings in Finance Docket Nos. 33507, 33461, 33462, and 33463 (titles omitted). In those proceedings, Tex Mex/KCS has complained that, after the merger, UP/SP (either singly or jointly with BNSF) unlawfully acquired control of HB&T in violation of 49 U.S.C. 11323, and has petitioned that a series of exemptions the carriers filed to restructure HB&T's operations leading to that control should be voided and/or revoked. We will proceed to consider the discrete matters in those cases—including Tex Mex/KCS' petition for consolidation and motion to compel discovery, and UP/SP's motion to dismiss—separately from our consideration in this oversight proceeding of requests by Tex Mex/KCS and others for new remedial conditions to the merger.

Philadelphia, Philadelphia County, PA. The line traverses United States Postal Service Zip Code 19140.

Conrail has certified that: (1) No local traffic has moved over the line for at least 2 years; (2) there is no overhead traffic moving over the line; (3) no formal complaint filed by a user of rail service on the line (or by a state or local government entity acting on behalf of such user) regarding cessation of service over the line either is pending with the Surface Transportation Board (Board) or with any U.S. District Court or has been decided in favor of complainant within the 2-year period; and (4) the requirements at 49 CFR 1105.7 (environmental reports), 49 CFR 1105.8 (historic reports), 49 CFR 1105.11 (transmittal letter), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line R. Co.—Abandonment— Goshen*, 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed. Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received, this exemption will be effective on June 21, 1998, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[1] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2),[2] and trail use/rail banking requests under 49 CFR 1152.29 must be filed by June 1, 1998. Petitions to reopen or requests for public use conditions under 49 CFR 1152.28 must be filed by June 11, 1998, with: Surface Transportation Board, Office of the Secretary, Case Control Unit, 1925 K Street, NW, Washington, DC 20423.

A copy of any petition filed with the Board should be sent to applicant's representative: John J. Paylor, Associate General Counsel, Consolidated Rail Corporation, 2001 Market Street—16A, Philadelphia, PA 19101–1416.

[1] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Section of Environmental Analysis in its independent investigation) cannot be made before the exemption's effective date. See *Exemption of Out-of-Service Rail Lines*, 5 I.C.C.2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

[2] Each offer of financial assistance must be accompanied by the filing fee, which currently is set at $1000. See 49 CFR 1002.2(f)(25).

If the verified notice contains false or misleading information, the exemption is void *ab initio*.

Conrail has filed an environmental report which addresses the abandonment's effects, if any, on the environment and historic resources. The Section of Environmental Analysis (SEA) will issue an environmental assessment (EA) by May 27, 1998. Interested persons may obtain a copy of the EA by writing to SEA (Room 500, Surface Transportation Board, Washington, DC 20423) or by calling SEA, at (202) 565–1545. Comments on environmental and historic preservation matters must be filed within 15 days after the EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), Conrail shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the line. If consummation has not been effected by Conrail's filing of a notice of consummation by May 22, 1999, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available on our website at "WWW.STB.DOT.GOV."

Decided: May 15, 1998.

By the Board, David M. Konschnik, Director, Office of Proceedings.

Vernon A. Williams,

Secretary.

BILLING CODE 4915–00–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[STB Docket No. AB–468 (Sub-No. 3X)]

Paducah & Louisville Railway, Inc.; Abandonment Exemption; in Muhlenberg County, KY

On May 5, 1998, Paducah & Louisville Railway, Inc. (P&L) filed with the Surface Transportation Board (Board) a petition under 49 U.S.C. 10502 for exemption from the provisions of 49 U.S.C. 10903 to abandon: (1) 6.70 miles of rail line between milepost J–126.6 at Central City, KY (JK Jct.), and milepost J–133.3 at Greenville, KY; and (2) 6.14 miles of branch line trackage known as the Beech Creek Lead, between Greenville and Pond Creek, KY, in Muhlenberg County, KY. The lines traverse U.S. Postal Service Zip Codes 42330, 42337, 42345 and 42367. The lines include the stations of JK Jct. at milepost J–126.7 and Pond Creek at milepost J–133.1.

The lines do not contain federally granted rights-of-way. Any documentation in the railroad's possession will be made available promptly to those requesting it. The interest of railroad employees will be protected by the conditions set forth in *Oregon Short Line R. Co.—Abandonment—Goshen*, 360 I.C.C. 91 (1979).

By issuance of this notice, the Board is instituting an exemption proceeding pursuant to 49 U.S.C. 10502(b). A final decision will be issued by August 21, 1998.

Any offer of financial assistance (OFA) under 49 CFR 1152.27(b)(2) will be due no later than 10 days after service of a decision granting the petition for exemption. Each OFA must be accompanied by a $1,000 filing fee. See 49 CFR 1002.2(f)(25).

All interested persons should be aware that, following abandonment of rail service and salvage of the lines, the lines may be suitable for other public use, including interim trail use. Any request for a public use condition under 49 CFR 1152.28 or for trail use/rail banking under 49 CFR 1152.29 will be due no later than June 11, 1998. Each trail use request must be accompanied by a $150 filing fee. See 49 CFR 1002.2(f)(27).

All filings in response to this notice must refer to STB Docket No. AB–468 (Sub-No. 3X) and must be sent to: (1) Surface Transportation Board, Office of the Secretary, Case Control Unit, 1925 K Street, NW., Washington, DC 20423–0001, and (2) J. Thomas Garrett, 1500 Kentucky Avenue, Paducah, KY 42003. Replies to the P&L petition are due on or before June 11, 1998.

Persons seeking further information concerning abandonment procedures may contact the Board's Office of Public Services at (202) 565–1592 or refer to the full abandonment or discontinuance regulations at 49 CFR part 1152. Questions concerning environmental issues may be directed to the Board's Section of Environmental Analysis (SEA) at (202) 565–1545. [TDD for the hearing impaired is available at (202) 565–1695.]

An environmental assessment (EA) (or environmental impact statement (EIS), if necessary) prepared by SEA will be served upon all parties of record and upon any agencies or other persons who commented during its preparation. Other interested persons may contact SEA to obtain a copy of the EA (or EIS).

BILLING CODE 4915–00–P

DEPARTMENT OF THE TREASURY

Customs Service

Proposed Collection; Comment Request; Declaration of Ultimate Consignee That Articles Were Exported for Temporary Scientific or Educational Purposes

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork and respondent burden, Customs invites the general public and other Federal agencies to comment on an information collection requirement concerning Declaration of Ultimate Consignee That Articles Were Exported for Temporary Scientific or Educational Purposes. This request for comment is being made pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13; 44 U.S.C. 3505(c)(2)).

DATES: Written comments should be received on or before July 21, 1998, to be assured of consideration.

ADDRESSES: Direct all written comments to U.S. Customs Service, Information Services Group, Room 3.2C, Attn.: J. Edgar Nichols, 1300 Pennsylvania Avenue, NW, Washington, D.C. 20229.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to U.S. Customs Service, Attn.: J. Edgar Nichols, Room 3.2C, 1300 Pennsylvania Avenue NW, Washington, D.C. 20229, Tel. (202) 927–1426.

SUPPLEMENTARY INFORMATION: Customs invites the general public and other Federal agencies to comment on proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13; 44 U.S.C. 3505(c)(2)). The comments should address: (1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimates of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden including the use of automated collection techniques or the use of other forms of information technology; and (e) estimates of capital or start-up costs and costs of operations, maintenance, and purchase of services to provide information. The comments that are submitted will be summarized and included in the Customs request for Office of Management and Budget (OMB) approval. All comments will become a matter of public record. In this document Customs is soliciting comments concerning the following information collection:

Title: Declaration of Ultimate Consignee That Articles Were Exported for Temporary Scientific or Educational Purposes.

OMB Number: 1515–0104.

Form Number: N/A.

Abstract: The "Declaration of Ultimate Consignee that Articles were Exported for Temporary Scientific or Educational Purposes" is used to provide duty free entry under conditions when articles are temporarily exported solely for scientific or educational purposes.

Current Actions: There are no changes to the information collection. This submission is being submitted to extend the expiration date.

Type of Review: Extension (without change).

Affected Public: Businesses, individuals, institutions.

Estimated Number of Respondents: 55.

Estimated Time Per Respondent: 30 minutes.

Estimated Total Annual Burden Hours: 27.

Estimated Total Annualized Cost on the Public: N/A.

Dated: May 18, 1998.

J. Edgar Nichols,

Team Leader, Information Services Group.

Customs Service

Public Meetings in New Orleans and Houston on Vessel Entrance and Clearance Procedures

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of public meetings.

SUMMARY: The United States Customs Service will be holding two public meetings regarding a recent policy determination regarding the entrance and clearance requirements for vessels and aircraft servicing offshore operations beyond the territorial waters of the United States. One meeting will be held in New Orleans, Louisiana, and the other will be held in Houston, Texas. This document announces the dates, times and other particulars of the meetings. Questions which one wishes to have addressed at the meetings may be communicated in writing to Customs Headquarters prior to the meetings.

DATES: The meetings will be held at the following dates and times: *For the Houston meeting:* June 15, 1998, from 1:00 p.m. until 4:00 p.m. *For New Orleans meeting:* June 17, 1998, from 1:00 p.m. until 4:00 p.m. *For submitted written comments to be addressed at meetings:* Comments must be received no later than the close of business June 1, 1998.

ADDRESSES: The meetings will be held at the following locations: *For the Houston meeting:* Port of Houston Authority Main Office Bldg., 111 East Loop North, First Floor Training Room, Houston, Texas. *For the New Orleans meeting:* New Orleans Customshouse, 423 Canal Street, Room 223, New Orleans, Louisiana. *Written comments should be submitted to:* Office of Field Operations, Trade Compliance, Attn: William Scopa, U.S. Customs Service, 1300 Pennsylvania Avenue, Washington, D.C. 20229, or faxed to the attention of William Scopa at (202) 927–1356.

FOR FURTHER INFORMATION CONTACT: *Regarding questions about attending the Houston meeting:* please call (281) 985–6700. *Regarding questions about attending the New Orleans meeting:* please call (504) 670–2391. *For information regarding the entrance and clearance requirements: for operational or policy concerns:* contact William Scopa at (202) 927–3112; *for regulatory issues:* contact Larry Burton at (202) 927–1287.

SUPPLEMENTARY INFORMATION:

Background

Recently, there has been concern regarding uniform Customs enforcement of the report of arrival requirements set forth in 19 U.S.C. 1433 for any vessel which has received merchandise while outside of the territorial seas; the formal entry requirements set forth in 19 U.S.C. 1434 for any vessel which has delivered or received merchandise while outside the territorial seas; and the corresponding clearance statute, 46 U.S.C. App. 91. The concern is also applicable, through 19 U.S.C. 1644, to enforcement of the report of arrival requirements, formal entry requirements and clearance requirements for aircraft receiving and delivering merchandise while outside the territorial seas. A policy determination by the Customs Service regarding its interpretation of these statutory requirements has had a substantial impact on both Customs and the trade.

Much of the concern resulted from an interpretation by the Customs Service which exempted vessels and aircraft transporting vessel supplies, bunkers, parts, equipment and crew, out beyond the territorial sea from entrance and clearance requirements. This interpretation applied not only to such transactions involving the delivery or receipt of the mentioned items to fixed-site oil rigs, but to non-fixed vessels as well.

Customs reexamined the pertinent statutes and determined that the exemptions for the delivery or receipt of vessel supplies, bunkers, parts, equipment and crew to non-fixed vessels located beyond the territorial sea cannot be sustained. It became necessary to immediately implement the suspension of this exemption. The pertinent statutes are clear and unambiguous and it would not be proper for Customs to delay their uniform enforcement.

Customs still, however, holds that vessels or aircraft delivering or receiving goods or passengers to or from fixed-site rigs are not subject to entrance and clearance requirements unless unentered foreign goods are involved in the transportation. Such an interpretation is consistent with the Outer Continental Shelf Lands Act.

Customs recognizes the fact that there has been an increase in commerce involving vessels and aircraft supplying necessary goods and services to numerous domestic and foreign commercial operations just beyond our territorial waters, especially in the Gulf of Mexico. Customs is contemplating providing for less burdensome entry and clearance procedures for vessels and aircraft engaged in these types of activities within the boundaries of the law.

Before beginning such procedures, Customs believes it would be beneficial both to the government and to private entities to hold public meetings on this issue to allow all interested parties an opportunity to be heard. The public forums will provide Customs with the opportunity to fully explain the extent of the recent policy determination.

Since the impact of the Customs policy is most heavily felt by ports in the Gulf of Mexico, public meetings will be held at the ports of New Orleans, Louisiana, and Houston, Texas.

At the meetings, personnel from Customs Headquarters will be available to answer questions regarding the applicability of the laws and to discuss the possibility of modifying vessel and aircraft entrance and clearance procedures. Questions relating to the entrance and clearance requirements under the new policy may be sent to Customs prior to the meetings. Such questions should be sent to Customs at the address or fax number set forth at the beginning of this document, and must be received no later than the close of business on June 1, 1998, in order to be addressed at the meetings.

Space at the meetings will be limited. Attendance will be accommodated on a first-come basis.

Dated: May 19, 1998.

Robert S. Trotter,

Assistant Commissioner. Office of Field Operations.

BILLING CODE 4820–02–P

DEPARTMENT OF THE TREASURY

United States Mint

Dollar Coin Design Advisory Committee; Notice of Meeting

May 18, 1998.

SUMMARY: The Dollar Coin Design Advisory Committee (DCDAC) will meet Monday and Tuesday June 8–9, 1998. The Committee will recommend to the Secretary of the Treasury a design concept for the obverse ("heads") of the new $1 coin. This meeting will be open to the public; however, due to limited space, seating at the meeting will be on a first-come basis.

Purpose

The purpose of this meeting is for the Committee to consider design concepts for the obverse of the new $1 coin and to determine a single such design concept to recommend to the Secretary of the Treasury. As an element of the agenda, the Committee will entertain presentations from the public the afternoon of Monday, June 8. In addition to public presentations, the Committee will receive an orientation briefing, nominate design concepts, and recommend a single design concept to the Secretary.

Dates, Times and Places of the Dollar Coin Design Advisory Committee Meeting

June 8, 1998, 11:00 a.m. to 5:15 p.m.
Federal Reserve Bank of Philadelphia, Auditorium, 10 Independence Mall (entrance on 7th Street), Philadelphia, PA 19106

June 9, 1998, 8 a.m. to 2:00 p.m.
Federal Reserve Bank of Philadelphia, Auditorium, 10 Independence Mall (entrance on 7th Street), Philadelphia, PA 19106

Members of the public wishing to schedule an oral presentation at the meeting must contact Michael White, in writing by mail, email, or fax, by no later than 12:00 noon Eastern Time on June 1, 1998 (see below). All mail submissions must be received by the established deadline in order to be considered timely. The request must identify the name of the individual who will make the presentation and the organization they represent, and include an outline of the merits, background, and historical significance of the concept that will be advocated. Presentations will be limited to five (5) minutes each, and will generally be reviewed on a first-come basis. Presenters will be notified by no later than June 5, 1998, if they have been selected for presentation. An additional thirty (30) minutes will be set aside during the first day of the meeting for unscheduled presentations.

Members of the public who have not been selected in advance for presentation may sign up on the first day of the meeting on June 8, 1998, between the hours of 11:00 a.m. and 12:00 noon, in the back of the meeting room. Requests for an unscheduled presentation will be reviewed on a first-come basis.

Any member of the public wishing to submit a design concept should do so via the Internet by accessing the Mint's web site (*http://www.usmint.gov*) and e-mailing the Mint by June 1, 1998. Alternatively, if no Internet access is available, design concepts may be submitted in writing to Michael White (see below); mail must be received no later than June 1, 1998 A summary of suggested concepts that comply with the parameters listed below will be compiled and presented to Committee members prior to the meeting.

As stated in the Committee Charter, the Committee will recommend to the Secretary an obverse design concept that comports with the following parameters: (a) The design shall maintain a dignity befitting the Nation's coinage, (b) the design shall have broad appeal to the citizenry of the Nation and shall avoid subjects or symbols that are likely to offend, (c) the design should not include any inscriptions beyond those required by statute, and (d) the design concept shall not depict a living person. In addition, the Secretary has determined that the obverse design should be a representation of one or more women.

FOR FURTHER INFORMATION CONTACT: Michael White, United States Mint, Dollar Coin Design Advisory Committee, 633 3rd Street N.W., Room 715, Washington, DC 20220, Voice: (202) 874–7565 (for additional information only; requests to make a presentation or propose a design concept must be in writing), Fax: (202) 874–4083, Web site: http://www.usmint.gov.

Federal Communications Commission

47 CFR Part 1

Telecommunications Act of 1996, Section 255, Implementation: Access to Telecommunications Services and Equipment, and Customer Premises Equipment by Persons With Disabilities; Proposed Rule

FEDERAL COMMUNICATIONS COMMISSION

47 CFR PART 1

[WT Docket No. 96–198; FCC 98–55]

Implementation of Section 255 of the Telecommunications Act of 1996: Access to Telecommunications Services, Telecommunications Equipment, and Customer Premises Equipment by Persons With Disabilities

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: This Notice of Proposed Rulemaking (NPRM) is an important step in the Commission's effort to increase the accessibility of telecommunications services and equipment to Americans with disabilities. The NPRM proposes a framework for implementing section 255 of the Communications Act of 1934 (Act), which requires telecommunications equipment manufacturers and service providers to ensure that their equipment and services are accessible to persons with disabilities, to the extent it is readily achievable to do so. In addition, if accessibility is not readily achievable, section 255 requires manufacturers and service providers to ensure compatibility with existing peripheral devices or specialized customer premises equipment commonly used by individuals with disabilities to achieve access, to the extent it is readily achievable to do so. The NPRM first explores the Commission's legal authority to establish rules implementing section 255. The NPRM then seeks comment on the interpretation of specific statutory terms that are relevant to the proceeding. Finally, the NPRM seeks comment on proposals to implement and enforce the requirement that telecommunications equipment and services be made accessible to the extent readily achievable. The actions proposed in the NPRM are needed to ensure that people with disabilities are not left behind in the telecommunications revolution and consequently isolated from contemporary life.

DATES: Comments are due on or before June 30, 1998, and reply comments are due on or before August 14, 1998. Written comments by the public on the proposed information collections are due on or before June 30, 1998. Written comments must be submitted by OMB on the proposed information collections on or before July 21, 1998.

ADDRESSES: Federal Communications Commission, Office of the Secretary, Room 222, Washington, D.C. 20554. In addition to filing comments with the Secretary, a copy of any comments on the information collections contained in the NPRM should be submitted to Judy Boley, Federal Communications Commission, Room 234, 1919 M Street, N.W., Washington, DC 20554, or via the Internet to jboley@fcc.gov, and to Timothy Fain, OMB Desk Officer, 10236 NEOB, 725–17th Street, N.W., Washington, D.C. 20503, or via the internet to fain__t@a1.eop.gov.

FOR FURTHER INFORMATION CONTACT: John Spencer, Mindy Littell, or Susan Kimmel, 202–418–1310. For additional information concerning the information collections contained in the NPRM, contact Judy Boley at 202–418–0214, or via the Internet at jboley@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a synopsis of the NPRM in WT Docket No. 98–198, FCC 98–55, adopted April 2, 1998, and released April 20, 1998. The complete text of the NPRM is available for inspection and copying during normal business hours in the FCC Reference Center (Room 239), 1919 M Street, N.W., Washington, D.C., and also may be purchased from the Commission's copy contractor, International Transcription Services (ITS, Inc.), (202) 857–3800, 1231 20th Street, N.W., Washington, D.C. 20036. Alternative formats of the full text of the NPRM are available to persons with disabilities in the following forms: computer diskette, large print, audio cassette, and Braille, by contacting Martha Contee at (202) 418–0260, TTY (202) 418–2555, or at mcontee@fcc.gov, or Ruth Dancey at (202) 418–0305, TTY (202) 418–2970, or at rdancey@fcc.gov. The full text of the NPRM can also be downloaded at http://www.fcc.gov/dtf/section255.html.

All relevant and timely comments will be considered by the Commission before final action is taken in this proceeding. To file formally in this proceeding, participants must file an original and five copies of all comments, reply comments, and supporting comments. If participants want each Commissioner to receive a personal copy of their comments, an original and nine copies must be filed. Comments and reply comments will be available for public inspection during regular business hours in the Commission's Reference Center and through ITS, Inc., the Commission's duplicating contractor.

For purposes of this proceeding, the Commission waives those provisions of the rules that require formal comments to be filed on paper, and encourages parties to file comments electronically. Electronically filed comments that conform to the guidelines specified in this summary will be considered part of the record in this proceeding and accorded the same treatment as comments filed on paper pursuant to Commission rules. To file electronic comments in this proceeding, parties may use the electronic filing interface available on the Commission's World Wide Web site at: <http://dettifoss.fcc.gov:8080/cgi-bin/ws.exe/beta/ecfs/upload.hts>. Further information on the process of submitting comments electronically is available at that location and at: <http://www.fcc.gov/e-file/>.

Paperwork Reduction Act

The NPRM contains a proposed information collection. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and OMB to comment on the information collections contained in the NPRM, as required by the Paperwork Reduction Act of 1995, Public Law No. 104–13. Public comments are due on or before June 30, 1998. Written comments must be submitted by OMB on the proposed information collections on or before July 21, 1998. Comments should address: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (2) the accuracy of the Commission's burden estimates; (3) ways to enhance the quality, utility, and clarity of the information collected; and (4) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

OMB Approval Number:

Title: Implementation of Section 255 of the Telecommunications Act of 1996: Access to Telecommunications Services, Telecommunications Equipment, and Customer Premises Equipment by Persons with Disabilities, Notice of Proposed Rulemaking, WT Docket No. 96–198.

Form No.:

Type of Review: New Collection.

Respondents: Complainants, Telecommunications Equipment Manufacturers, and Telecommunications Service Providers.

Number of Respondents: 1,000 prospective complainants annually will report accessibility problems or file complaints using the Commission's "fast-track" problem resolution method,

and may be asked to provide the Commission with further information later in the process. This should take approximately 2 hours per response, for a total annual burden of about 2,000 hours. There will be no estimated annual cost. Approximately 1,000 equipment manufacturers and service providers annually are expected to be involved in resolving these complaints. It is estimated that these steps will take approximately 6.50 hours per respondent for a total annual burden of 6,500 hours. The estimated annual cost is $720,000. Additionally, 78,830 telecommunications equipment manufacturers and service providers annually are expected to provide a list of contacts for disability access complaints. And it is possible that 78,830 telecommunications equipment manufacturers and service providers will have equipment or services which will receive a seal or other imprimatur from a consumer or industry group that identifies the service or equipment as in compliance with section 255. Satisfying these burdens will likely take slightly more than 1 hour per respondent for a total annual burden of 78,830 hours, and no annual cost.

Total Number of Respondents: 79,830.
Total Annual Burden: 87,330 hours.
Total Annual Cost: $720,000.
Frequency of Response: Occasional.
Needs and Uses: The information filed as part of a complaint, if the proposal made by the Commission in the NPRM is adopted, will be reviewed by the Commission and by the pertinent entity to develop a solution to the problem. The information filed by the consumer after a complaint is resolved, if the proposal made by the Commission in the NPRM is adopted, will be used by the Commission to verify that the complainant is satisfied that either the impediment to accessibility no longer exists or that a practical solution could not be reached. Any demonstrations made by manufacturers and service providers that accessibility was considered in the equipment or service design process will be used by the Commission to evaluate compliance with the intent of section 255. The interim and final reports submitted by these entities will be used by the Commission to track the progress of resolution of complaints. Rebuttals to assertions of resource availability will help determine whether a particular accessibility measure is a readily achievable solution to an accessibility problem. The list of contacts who are responsible for telecommunications access complaints in each company will be used to speed the complaint process and to increase the likelihood of settlement between parties before the complaint reaches the Commission. The seal or imprimatur from a consumer or industry group that identifies a service or equipment as in compliance with section 255 will be used to inform consumers about the accessibility of particular products or services and will serve as an incentive for compliance by manufacturers and service providers.

Synopsis of Notice of Proposed Rulemaking

1. The Commission adopts this NPRM as an important step in opening the telecommunications revolution to the 54 million Americans with disabilities. Section 255 of the of the Communications Act (section 255), as added by the Telecommunications Act of 1996 (1996 Act) [1] mandates that telecommunications equipment manufacturers and service providers must ensure that their equipment and services are accessible to persons with disabilities, to the extent that it is readily achievable to do so.[2] This goal has become increasingly important as the ability to utilize the benefits of telecommunications technology has become more critical to fully participating in American society. Congress gave the Commission two specific responsibilities: (1) to exercise exclusive jurisdiction with respect to any complaint filed under section 255, and (2) to coordinate with the Architectural and Transportation Barriers Compliance Board (Access Board) in developing guidelines for accessibility of telecommunications equipment and customer premises equipment (CPE).

2. This proceeding was initiated by Notice of Inquiry (NOI) adopted on September 16, 1996 (61 FR 50465). Additionally, in February 1998, the Access Board issued accessibility guidelines *(Access Board Order)* with respect to equipment (63 FR 5608, February 3, 1998). The NPRM is the next step in establishing a record on which to base the Commission's final rules implementing section 255.

3. The NPRM first explores the Commission's legal authority under section 255, and tentatively concludes that the Commission has authority to establish rules to implement section 255. The NPRM also considers other issues related to Commission jurisdiction, including the relationship between the Commission's authority under section 255 and the guidelines established by the Access Board.

4. The NPRM then seeks comment on the interpretation of specific statutory terms that are used in section 255. Many of the terms are defined elsewhere in the Act, and the Commission seeks comment on its tentative view that it is bound by these definitions in the context of section 255. Other terms have been incorporated from the Americans with Disabilities Act.[3] The Commission seeks comment on how these terms can be made workable in the context of telecommunications services and equipment. In particular, the NPRM addresses certain aspects of the term "readily achievable," contained in section 255. The Commission proposes to adopt the ADA definition, but also proposes to establish specific factors to define "readily achievable" in the telecommunications context.

5. Finally, the NPRM sets forth proposals to implement and enforce the requirement of section 255 that telecommunications offerings must be accessible to the extent readily achievable. The NPRM also contains proposals based on the requirement that, if accessibility is not readily achievable, manufacturers and service providers must ensure compatibility with existing peripheral devices or specialized customer premises equipment commonly used by individuals with disabilities to achieve access, to the extent it is readily achievable to do so. The centerpiece of these proposals is a "fast-track" process designed to resolve many accessibility problems informally, providing consumers with quick solutions and freeing manufacturers and service providers from the burden of more structured complaint resolution procedures. In cases where fast-track solutions are not possible, however, or where there appears to be an underlying failure to comply with section 255, the Commission would pursue remedies through more conventional processes. In both cases, in assessing whether service providers and equipment manufacturers have met their accessibility obligations under section 255, the Commission would look favorably upon demonstrations by companies that they considered accessibility throughout their development of telecommunications services and equipment.

I. Statutory Authority

6. The NPRM considers the scope of the Commission's rulemaking authority and finds that, in section 255, Congress enacted broad principles that require

[1] Public Law 104–104, 110 Stat. 56 (1996).
[2] 47 U.S.C. 255.
[3] Public Law 101–336, 104 Stat. 327 (1990) (codified at 42 U.S.C. 12101–12213) (ADA).

interpretation and implementation in order to ensure an efficient, orderly, and uniform regime governing access to telecommunications services and equipment. As a result, the Commission tentatively concludes that this regime can best be implemented if it adopts specific guidance concerning the requirements of section 255, which will enable the Commission to carry out its enforcement obligations under the Act effectively and efficiently.

7. Additionally, the Commission finds that the language of section 255 indicates that Congress intended to confer upon the Commission broad substantive authority to implement the requirement that telecommunications equipment and services be accessible, and gives the Commission exclusive authority to enforce that mandate. The Commission views the Access Board's equipment guidelines as a starting point for the implementation of section 255 and stresses the importance of striving to interpret section 255 in a way that ensures that telecommunications services and equipment will be treated consistently. The Commission seeks comment on its tentative conclusion that, while it has discretion regarding use of the Access Board's guidelines in developing its comprehensive implementation scheme, the Commission proposes to accord the guidelines substantial weight in developing regulations and in developing a broader structure for implementation.

8. The Commission determines that if Congress had intended to permit complaints under section 255 only against common carriers, and not manufacturers, the statute would say so explicitly. The Commission seeks comment on whether there is any basis for concluding that damages, pursuant to sections 207 and 208 of the Act or otherwise, are available with respect to entities other than common carriers. In addition, the Commission affirms that section 255 forecloses civil actions for damages brought under section 207. The exclusive jurisdiction established in the statute for Commission consideration of complaints, in combination with the preclusion of private rights of action, does not allow for private litigation. The Commission seeks comment on this conclusion.

II. Statutory Definitions

A. Scope of Statutory Coverage

(1) "Telecommunications" and "Telecommunications Service"

9. Section 255 applies to "manufacturer[s] of telecommunications equipment or customer premises equipment" and "provider[s] of telecommunications service," and section 251(a)(2) applies only to "telecommunications carrier[s'] * * * network features, functions, or capabilities."[4] The Commission tentatively concludes that, to the extent these phrases are broadly grounded in the Act, they require no further definition, and the Commission need only elucidate their application in the context of section 255. To the extent specific terms arise solely in connection with section 255, however, the Commission will consider whether further definition or clarification is appropriate. The Commission notes that the use of the term "telecommunications" in the statute may have the effect of excluding from the coverage of section 255 a number of services that might be desired by consumers. Only those services which are considered to be "telecommunications services" are subject to regulation under Title II of the Act. "Information services," such as voice mail and electronic mail, are excluded from regulation.

10. Many services are considered telecommunications services and, therefore, are clearly subject to the requirements of section 255. The Commission recognizes, however, that there are some important and widely used services which, under the Commission's interpretation, fall outside the scope of section 255 because they are considered information services. Given the broad objectives Congress sought to accomplish by its enactment of section 255, the Commission seeks comment on whether Congress intended section 255 to apply to a broader range of services.

(2) "Provider of Telecommunications Service"

11. Because the Act does not define "provider of telecommunications service," the NPRM proposes some clarifications regarding aspects of this phrase as used in section 255. With respect to section 255, the Commission believes that Congress intended to use the term "provider" broadly, to include entities that supply or furnish telecommunications services, as well as entities that make available such services. The Commission therefore proposes that all entities offering telecommunications services to the public should be separately subject to section 255, without regard to accessibility measures taken by the service provider who originates the offering. For example, the statute does not exclude resellers from the definition of telecommunications service provider. The NPRM seeks comment on this proposal.

12. Additionally, the NPRM proposes to subject a provider of telecommunications service to the requirements established in sections 255(c) and 255(d) only to the extent that it is providing telecommunications services. The Commission seeks comment on whether this proposal is practical if a provider is using the same facilities to offer telecommunications services and services not meeting the statutory definition.

(3) "Manufacturer of Telecommunications Equipment or Customer Premises Equipment"

13. Section 255(b) of the Act provides that "[a] manufacturer of telecommunications equipment or customer premises equipment shall ensure that the equipment is designed, developed, and fabricated to be accessible to and usable by persons with disabilities, if readily achievable."[5]

(a) *Equipment.* 14. The NPRM finds that section 255 does not distinguish between or set out separate accessibility requirements for telecommunications equipment and customer premises equipment (CPE). The Commission tentatively concludes that these terms encompass all equipment used in the provision of telecommunications service, whether collocated with a user or found elsewhere in a telecommunications system. The Commission further tentatively concludes that section 255 applies to all such equipment the same requirement of functional accessibility. In short, to the extent end users must interact with equipment to use telecommunications services, section 255 applies. The NPRM invites comment on this view.

15. The NPRM seeks comment on possible approaches to resolving practical difficulties presented when inaccessibility may be due to multiple elements of a telecommunications system.

16. The Commission next proposes that section 255 apply to multi-use equipment only to the extent the equipment serves a telecommunications function. The NPRM solicits comment on this proposal, and in particular on practical aspects of its application. What, for example, is the obligation of a manufacturer who produces equipment apparently intended for a non-telecommunications application, but that finds use in connection with a

[4] 47 U.S.C. 255, 251(a)(2).

[5] 47 U.S.C. 255(b).

telecommunications service subject to section 255?

17. Regarding software products, the NPRM notes that the definition of telecommunications equipment includes "software integral to such equipment (including upgrades)."[6] Given that the focus of section 255 should be on functionality, the Commission tentatively views software as simply one method of controlling telecommunications functions. The NPRM thus proposes to treat software integral to telecommunications equipment the same as equipment or telecommunications services, and seeks comment on this proposal.

18. On the other hand, the Commission notes that the statutory definition of CPE does not include a corresponding explicit reference to software. Where a CPE manufacturer markets products that include software, the Commission sees no reason to treat the bundled software differently from any other component of the equipment. Where software to be used with CPE is marketed separately from the CPE, however, the Commission believes that the software itself would not be subject to section 255, and that it could not even be considered to fall within the statutory definition of CPE. Further, the Commission believes that software manufacturers would not be directly subject to section 255 for software bundled with the CPE of other manufacturers. The NPRM seeks comment on these issues, and in particular on the practical aspects of applying this distinction.

(b) Manufacturer. 19. The NPRM tentatively concludes that section 255 should be construed to apply to all manufacturers offering equipment for use in the United States, regardless of their location or national affiliation. The Commission seeks comment on this proposal.

20. Regarding the question of how section 255 should apply to manufacturers involved in the production of multiple-source equipment, the NPRM proposes to adopt the "final assembler" approach taken by the Access Board guidelines. The Commission seeks comment on this proposal.

21. The NPRM also tentatively concludes that the term "manufacturer" generally would not include post-manufacturing distribution entities such as wholesalers and retailers. Where the manufacturing and distributing entities are affiliated, however, or where the distributing entities provide customer support services commonly offered by manufacturers of equipment subject to section 255, the Commission tentatively finds that it may be desirable either to treat the distributor as a "manufacturer" or to assign to the final assembler responsibility for the distributor's accessibility efforts. The Commission seeks comment on the types of arrangements between manufacturers and distributors that could present these situations, including private brand arrangements, and seeks comment on effective ways of dealing with them.

(4) "Network Features, Functions, or Capabilities"

22. Section 251(a)(2) of the Act requires that a telecommunications carrier not install network features, functions, or capabilities that do not comply with the guidelines and standards established pursuant to section 255. The Act does not expressly define "network features, functions, and capabilities," but it does provide examples as part of its definition of "network element."[7] The Commission recently explored this area from the standpoint of interconnection in some detail in the *Local Competition Order* (61 FR 45476, August 29, 1996). The NPRM therefore tentatively concludes that the phrase "network features, functions, or capabilities" does not require further interpretation in this proceeding.

23. The NOI sought comment on the relationship between the duty of carriers under section 251(a)(2) and the duty of equipment manufacturers and service providers under section 255. Based on the limited comments received on this issue, the NPRM tentatively concludes that section 251(a)(2) governs carriers' configuration of their network capabilities. It does not make them guarantors of the decisions of service providers regarding how to assemble services from network capabilities, and it does not impose requirements regarding accessibility characteristics of the underlying components.

24. The Commission invites further comment on these views, on specific situations that might bring section 251(a)(2) into play, and on recommended approaches to address likely problems. The Commission also seeks comment regarding the relationship between the enforcement procedures established by section 252 for interconnection agreements and the Commission's exclusive enforcement authority under section 255. Additionally, the Commission seeks comment regard how responsibility for any guidelines or standards for accessibility and compatibility of equipment or services to be adopted in this proceeding should be apportioned between (1) the underlying manufacturer or provider of a network element; and (2) the carrier that incorporates that element into its network to provide a feature, function, or capability.

B. Nature of Statutory Requirements

25. Other essential terms used in section 255 are not native to the Act, but have their roots in the ADA and other disability law. For these terms, the Commission takes special note of the expertise and recommendations of the Access Board. However, the Commission tentatively concludes that it is bound to interpret section 255 in light of the broader purposes of the 1996 Act and of the Communications Act itself.

(1) "Disability"

26. Section 255(a)(1) of the Act provides that "[t]he term 'disability' has the meaning given to it by section 3(2)(A) of the [ADA]." The ADA defines "disability" as:[8]

- A physical or mental impairment that substantially limits one or more of the major life activities of an individual;
- A record of such an impairment; or
- Being regarded as having such an impairment.

The NPRM proposes to follow what the Commission considers to be the mandate of section 255 by using without modification or enhancement the ADA definition of "disability." In order to provide guidance for equipment manufacturers and service providers seeking to increase accessibility of their offerings, however, the NPRM also proposes to use the Access Board's list of categories of common disabilities that should be considered in analyzing equipment and service offerings under section 255. The Commission notes that it does not view the list as either exhaustive or final. The Commission seeks comment on these proposals, and invites suggestions for additional ways of making the definition of "disability" useful to industry and consumers.

(2) "Accessible to and Usable by"

27. Section 255 requires that equipment and telecommunications services be "accessible to and usable by individuals with disabilities, if readily achievable." The Access Board guidelines define "usability" as meaning "that individuals with disabilities have access to the full functionality and documentation for the

[6] 47 U.S.C. 153(45).

[7] 47 U.S.C. 153(29).

[8] 42 U.S.C. 12102(a)(2).

product, including instructions, product information (including accessible feature information), documentation, and technical support functionally equivalent to that provided to individuals without disabilities," and define "accessibility" as compliance with sections 1193.31 through 1193.43 of the Access Board's rules. The Commission proposes to adopt the Access Board's definition of "usability" as part of the Commission's definition of "accessible to and usable by." The Commission tentatively concludes that there is no reason to distinguish the two terms for purposes of section 255, and will use the term "accessibility" in the broad sense to refer to the ability of persons with disabilities to actually use the equipment or service by virtue of its inherent capabilities and functions.

28. The Access Board guidelines define equipment accessibility as including a list of functions. In addition, section 1193.37 of the Access Board's rules calls for a pass-through of "cross-manufacturer, non-proprietary, industry-standard codes, translation protocols, formats or other information necessary to provide telecommunications in an accessible format." The Commission believes the Access Board's definition of accessibility and the related Appendix materials in the Access Board's order provide an appropriate basis for evaluating accessibility obligations under section 255, and proposes to adopt them as part of the definition of "accessible to and usable by." The Commission also proposes that such an evaluation should include not only use of the equipment itself, but also support services akin to what is provided to consumers generally to help them use equipment. The NPRM seeks comment on this proposal and on how the Commission might apply the Access Board's mandate that CPE "pass through" accessibility information. Further, the Commission invites comment on criteria that would constitute service accessibility.

29. The NPRM next reiterates the Commission position, as stated in the NOI, that section 255 reaches only those aspects of accessibility to telecommunications over which equipment manufacturers and service providers subject to the Commission's authority have direct control, such as the design of equipment or the manner in which a telecommunications service is delivered to users. The Commission seeks comment on this position. Similarly, if a person with a disability is able to use CPE such as a screen-reading terminal, but finds that a telecommunications service is not usable because the terminal cannot generate a screen display from the data provided through the service, this would also present an issue of inaccessibility, but the cause of the inaccessibility might be the service, or the equipment, or both. The Commission also seeks comment on what accessibility obstacles are encountered by persons with disabilities that are attributable to telecommunications service or equipment characteristics. To the extent that service accessibility is determined by network equipment, including integral software, how should the Commission distinguish between accessibility obstacles attributable to network equipment, and those attributable to service providers?

(3) "Compatible With"

(a) "Peripheral devices or specialized CPE". 30. Where accessibility is not readily achievable, section 255(d) requires that telecommunications offerings be compatible with "existing peripheral devices or specialized [CPE] commonly used by individuals with disabilities to achieve access, if readily achievable."[9] The Access Board defines "peripheral devices" as "[d]evices employed in connection with telecommunications equipment or customer premises equipment to translate, enhance, or otherwise transform telecommunications into a form accessible to individuals with disabilities." It defines specialized CPE as "[e]quipment, employed on the premises of a person (other than a carrier) to originate, route, or terminate telecommunications, which is commonly used by individuals with disabilities to achieve access." The Board further explains its definitions as follows:

> [T]he term peripheral devices commonly refers to audio amplifiers, ring signal lights, some TTY's, refreshable Braille translators, text-to-speech synthesizers and similar devices. These devices must be connected to a telephone or other customer premises equipment to enable an individual with a disability to originate, route, or terminate telecommunications. Peripheral devices cannot perform these functions on their own. Specialized [CPE] should be considered a subset of [CPE], and . . . manufacturers of specialized [CPE] should make their products accessible to all individuals with disabilities, including the disability represented by their target market, where readily achievable.

31. The NPRM seeks comment on these definitions, but tentatively concludes that it is not necessary to distinguish between peripheral devices and specialized CPE. The NPRM further tentatively concludes that the reference in section 255(d) to equipment and devices "commonly used * * * to achieve access" identifies products with a specific telecommunications functionality. In contrast, devices such as hearing aids, which have a broad application outside the telecommunications context, may be used in conjunction with peripheral equipment or specialized CPE, but are not themselves considered specialized CPE or peripheral devices under the Act. The NPRM seeks comment on this issue.

(b) "Commonly used". 32. The NPRM next considers criteria for determining when equipment subject to section 255 is "commonly used." In light of the specific definitions set out in the Access Board guidelines, the NPRM seeks further comment with regard to when devices and CPE should be considered "commonly used," as described in the statute. The NPRM also seeks comment regarding whether and to what extent the cost of CPE or peripheral devices should be considered in determining whether the CPE or peripheral device may be deemed to be commonly used by persons with disabilities. The Commission's tentative view is that the CPE or peripheral device must be affordable and widely available in order to be considered "commonly used" by persons with disabilities. The Commission also notes that a listing of such "commonly used" components could be a valuable source of information to apprise persons with disabilities of the available technologies, and the Commission seeks comment regarding whether and how a listing could be maintained.

(c) Compatibility. 33. Several commenters note that ensuring compatibility requires coordination among, *e.g.*, manufacturers of specialized customer premises equipment, network equipment and CPE manufacturers, and service providers. The Access Board lists five criteria for determining compatibility, subject to applicability: (1) External access to all information and control mechanisms; (2) connection point for external audio processing devices; (3) compatibility of controls with prosthetics; (4) TTY connectability; and (5) TTY signal compatibility. The NPRM proposes to adopt these five criteria. The Commission recognizes, however, that these criteria might need to be broadened to account for likely technological advances in both telecommunications and accessibility products, either now or in the future, as developments warrant. The NPRM seeks

[9] 47 U.S.C. 255(d).

comment on this proposal, and on these views.

(d) Other matters. 34. Finally, the NPRM requests commenters to address how the definition of "readily achievable" should apply to the obligations of manufacturers and service providers to provide compatibility pursuant to section 255(d). Specifically, the NPRM seeks comment regarding the extent to which the same factors that are used to determine whether accessibility is readily achievable can or should also be used to determine whether compatibility is readily achievable. Commenters are also asked to address how the goal of compatibility can be met without hampering competition or the development of new technologies.

(4) "Readily Achievable"

(a) General. 35. Section 255 requires accessibility to the extent it is 'readily achievable.' Section 255(a)(2) provides that "[t]he term "readily achievable" has the meaning given to it by section 301(9) of [the ADA]," which states: [10]

> The term "readily achievable" means easily accomplishable and able to be carried out without much difficulty or expense. In determining whether an action is readily achievable, factors to be considered include—
>
> (A) the nature and cost of the action needed under [the ADA];
>
> (B) the overall financial resources of the facility or facilities involved in the action; the number of persons employed at such facility; the effect on expenses and resources, or the impact otherwise of such action upon the operation of the facility;
>
> (C) the overall financial resources of the covered entity; the overall size of the business of a covered entity with respect to the number of its employees; the number, type, and location of its facilities; and
>
> (D) the type of operation or operations of the covered entity, including the composition, structure, and functions of the workforce of such entity; the geographic separateness, administrative or fiscal relationship of the facility or facilities in question to the covered entity.

The NPRM tentatively concludes that "readily achievable," as defined by the ADA and incorporated by section 255, simply means "easily accomplishable and able to be carried out without much difficulty or expense." The Commission believes that this broad definition is applicable to telecommunications equipment and services.

36. It is also the Commission's tentative view that the four factors set out with the ADA definition of "readily achievable" should be construed as the ADA describes them: factors to be considered in applying the definition in the ADA setting. Given the differences between architectural barriers and telecommunications barriers, it is the Commission's tentative view that the ADA factors should guide, though not constrain, the development of factors that more meaningfully reflect pertinent issues and considerations relevant to telecommunications equipment and services. The Commission intends that any factors developed in this rulemaking will be applied appropriately to the facts of particular cases, and will not operate so as to inadvertently impede efforts to arrive at reasonable judgments in each case. The Commission seeks comment on these tentative conclusions.

(b) Telecommunications factors. 37. The Commission believes a useful framework for analyzing whether a particular telecommunications accessibility feature is "readily achievable" involves looking at three areas: (1) Is the feature feasible? (2) What would be the expense of providing the feature? (3) Given its expense, is the feature practical? The Commission seeks comment on these proposed factors. The Commission especially seeks comment on the practical implications of various options: their effect on the development and marketing of accessibility features, on the pace of innovation, and on the administrative costs associated with implementation and enforcement measures.

38. A difficult aspect of determining whether a particular accessibility feature is readily achievable involves determining whether it is practical, given the expenses involved. In determining the practicality of providing a particular accessibility feature, the Commission believes it is appropriate to consider the resources available to the provider to meet the expenses associated with accessibility, the potential market for the product or service, the degree to which the provider would recover the incremental cost of the accessibility feature, as well as issues regarding product life cycles. Because the ultimate determination of whether it is readily achievable to make a particular product offering accessible to users with a particular disability may be complex and will depend on the particular circumstances of the case, the nature and extent of section 255 obligations will generally have to be evaluated and refined on a case-by-case basis, as the Commission resolves complaints of non-compliance. The Commission seeks comment on this general approach, as well as on the following specific elements of practicality.

(i) Resources

39. The NPRM examines various ways to consider the resources of firms of varying characteristics, in a manner which would not distort competitive incentives, including the relationship between parent and subsidiary corporations, and tentatively finds most compelling the view that the financial resources of the organization that has legal responsibility for, and control over, a telecommunications product (service or equipment) should be presumed to be available to make that product accessible in compliance with section 255. The NPRM therefore proposes to establish a presumption that the resources reasonably available to achieve accessibility are those of the entity legally responsible for the equipment or service that is subject to the requirements of section 255. The NPRM also proposes, however, that this presumption may be rebutted in a complaint proceeding or other enforcement proceeding in two different respects:

- On the one hand, the assets and revenues of another entity (*e.g.*, parent or affiliate) that is not legally responsible for the equipment or service involved may still be treated as available for purposes of achieving accessibility under section 255, if it is demonstrated that those assets and revenues are generally available to the entity that does have legal responsibility for the equipment or service.
- On the other hand, the general presumption can also be rebutted by a respondent showing that the sub-unit (*e.g.*, corporate division or department) actually responsible for the product or service in question does not have access to the full resources of the corporation or equivalent organization of which it is a part.

40. The Commission tentatively concludes that this presumption may potentially serve as an effective guard against evasive practices. In any event, the NPRM proposes that the Commission will determine what resources are reasonably available on a case-by-case basis in the context of complaint proceedings or other enforcement proceedings, because the variety of organizational forms and other circumstances make development of quantitative standards by the Commission impracticable. The NPRM seeks comment on these proposals.

(ii) Market Considerations

41. The NPRM discusses the scope of the accessibility requirement in terms of how the provision of either conflicting accommodations for different

[10] 42 U.S.C. 12181(9).

disabilities, or accommodations that would address multiple disabilities but would make the offering technically or economically impracticable, should be viewed under the "readily achievable" standard. The NPRM also seeks comment on how to incorporate market considerations into an evaluation of whether particular accessibility features are practicable. Additionally, the NPRM invites comment on how accessibility reductions should be treated.

(iii) Cost Recovery

42. The Commission also believes it is appropriate to consider the extent to which an equipment manufacturer or service provider is likely to recover the costs of increased accessibility. The Commission explains that this is not to say that the equipment manufacturer or service provider must be able to fully recover the incremental cost of the accessibility feature in order for accessibility to be readily achievable. Rather, the Commission merely finds that cost recovery is a factor that a company should weigh in making its determination of what is readily achievable. The NPRM further seeks comment on the extent that service providers and manufacturers should consider affordability of accessible products when making cost recovery assessments.

(iv) Timing

43. Several comments address accessibility obligations over the course of a product life cycle, especially as it relates to improved accessibility technology. The Commission phrases the timing question broadly, by asking how product life cycles should be taken into account in making "readily achievable" determinations. Given that section 255 has been in effect since February 1996, and in light of the Commission's tentative conclusion that timing issues should be considered as an element of "readily achievable," the Commission believes that a general "grace period" for compliance is not warranted. The NPRM, however, seeks comment on this view.

III. Implementation Processes

44. The NPRM next proposes measures that will put section 255 into action, ensuring manufacturers and service providers are in compliance with the requirement that their products must be accessible, to the extent readily achievable, and providing relief for consumers when there are compliance problems. The Commission's proposals rest on two principles: (1) Responsiveness to consumers; and (2) efficient allocation of resources. The NPRM therefore proposes to streamline the process for addressing accessibility issues as much as possible, freeing consumers and industry alike to apply their resources to solving access problems, rather than subjecting them to burdensome procedural requirements. The Commission has made every effort to fashion proposals that will reduce administrative burdens for all who might be involved in the complaint process, and invites suggestions for still further improvements.

45. Thus, the NPRM proposes a two-phase program for dealing with consumer issues arising under section 255. In the first phase, consumer inquiries and complaints will be referred to the manufacturer or service provider concerned, who will have a short period of time to solve the complainant's access problem and informally report to the Commission the results of its efforts. Matters or disputes that remain unresolved may proceed to a second-phase dispute resolution process.

A. Fast-Track Problem-Solving Phase

46. An important part of the Commission's proposal is an informal, "fast-track" process designed to solve access problems quickly and efficiently. If the proposed framework is adopted, this process would function as follows:

- The process would be initiated by the submission of a complaint.
- Upon receipt of a complaint, the Commission would promptly forward the complaint to the manufacturer or service provider (or both) whose offerings are the subject of the complaint, and set a deadline for a report of action taken to resolve the complaint.
- During the period prescribed, or during an extension period granted for good cause, the manufacturer or provider would attempt to solve the complainant's problem regarding the accessibility or compatibility of the provider's service or equipment. During this time, the Commission staff would be available to both the complainant and the respondent to provide information and informal assistance upon request.
- By the end of the fast-track phase, the respondent would be expected to informally report to the Commission the results of its efforts to solve the problem that is the subject of the complaint.
- The Commission would evaluate the respondent's report. The matter would be closed if it appeared that the complainant's access problem had been solved and there was no underlying compliance problem, or if the matter was outside the scope of section 255.
- On the other hand, the matter would proceed to a second phase of dispute resolution processes if the problem remained unsolved and there was a question of whether an accessibility solution was readily achievable, or if it appeared there was an underlying problem regarding the respondent's compliance with its section 255 accessibility obligations.

47. The Commission believes that the proposed fast-track process will frequently permit complainants and respondents to resolve disputes before requiring any use of additional Commission processes. In addition, the burden on all parties is intended to be minimal under the Commission's proposal, and the process encourages the rapid, informal solution of access problems. The Commission seeks comment on the general outline and on the more specific aspects of this fast-track process.

(1) Initial Contact With Commission

48. The NPRM first proposes to encourage any consumer who has not directly contacted the manufacturer or service provider before contacting the Commission to do so, and the Commission will provide contact information for that purpose. Consumers would also be invited to contact the Commission again if the problem is not resolved satisfactorily. The Commission seeks comment on this proposal.

49. Further, because section 255 complaints will involve offerings overseen by various Commission bureaus and offices, and because consumers may be unfamiliar with these organizational differences, the Commission anticipates establishing a central Commission contact point for all section 255 inquiries and complaints. The NPRM seeks comment on measures the Commission should take to ensure that persons with disabilities are made aware of their opportunity to address inquiries and complaints to a central contact point at the Commission.

50. The NPRM proposes that persons with disabilities may submit their complaints by any accessible means, including, for example, letter, Braille, facsimile, electronic mail, internet, TTY, audio cassette, or telephone call. The NPRM also proposes, however, to make available a complaint form, but not to require its use for the initiation of a section 255 complaint. In whatever form a complaint is received, however, the Commission will need to ascertain at least the following information before it can proceed:

- Complainant contact information: Name, mailing address, and preferred

contact method (letter, telephone number, TTY number, facsimile number, or electronic mail address).

• Identification of the equipment or service complained of, and the name (and, if known, the address) of its manufacturer or provider.

• A description of how the equipment or service is inaccessible to persons with a particular disability or combination of disabilities.

The Commission seeks comment on what additional information, if any, would tend to provide a clearer description of the difficulty complained of, without requiring excessive or irrelevant information. In any event, the Commission would retain discretion to request from complainants additional information that would help it to rapidly address the request.

(2) Provider Contact

51. The Commission's fast-track proposal envisions initially referring complaints to the manufacturer or service provider (or both, as appropriate). This will necessitate obtaining a list of contact points for each manufacturer and service provider subject to section 255. The NPRM solicits comment on a range of questions pertinent to the establishment and maintenance of such a list of contacts and on whether to require firms to provide accessibility contact information directly to consumers and, if so, how. The Commission seeks comment on these matters and also on whether the process should include a notification to the complainant that the complaint has been referred and, if so, what information the notification should include.

(3) Solution Period; Report

52. Upon receipt of a complaint, the Commission would promptly forward it to the manufacturer or service provider (or both) whose offerings are the subject of the complaint, and set a deadline for a report of action taken to resolve the complaint. The NPRM seeks comment on appropriate customer service standards for complaint forwarding. The NPRM also seeks comment on whether the Commission should forward complaints as submitted, regardless of format, or whether it should forward "translations" or transcripts of complaints submitted in formats such as Braille.

53. The NPRM next proposes an action report deadline of five business days from the date the complaint is forwarded, as a reasonable balance between providing sufficient time for respondents to study the complaint, gather relevant information, identify possible accessibility solutions, and, most importantly, work with the complainant to solve the access problem if possible, and providing accessibility as soon as practicably possible. The NPRM invites comment on this proposal.

54. The NPRM also proposes that a provider may file an interim report and a request for additional time in situations where a period of five business days (for example) may be enough time for a provider to assess a problem and begin to resolve it, but may not be long enough to complete the resolution. The Commission seeks comment on this proposal and also on how to provide a mechanism for either party (or the Commission) to terminate the fast-track phase and proceed to traditional dispute resolution processes, where it appears the fast-track process is not leading to a mutually satisfactory resolution.

55. By the end of the fast-track process, the manufacturer or service provider is expected to report informally to the Commission regarding whether the complainant has been provided the access sought, and if not, why it has not. To put the circumstances of the particular accessibility complaint in context, it might also be appropriate for the respondent to report generally its procedures for ensuring product accessibility. In order to provide flexibility in this process, the Commission proposes that such reports may be submitted by telephone call, electronic mail, facsimile or hard-copy letter. The Commission seeks comment on this proposal.

56. Finally, to ensure the integrity of the fast-track process by encouraging a sharing of information between complainant and respondent, the NPRM proposes to require that respondents provide copies of their reports to complainants. To avoid formalizing and stifling the process, however, the NPRM also seeks comment not only on this proposal, but on how to satisfy this requirement in the case of telephonic or other oral reports.

(4) Commission Evaluation

57. At the end of the fast-track process, the NPRM proposes that the Commission would consider both (1) the success of the respondent in providing an appropriate access solution, if possible; and (2) whether there appeared to be an underlying compliance problem, regardless of whether the particular complainant had been satisfied. That review would determine whether further action was required, as follows:

• If it appeared that the complainant's access problem had been satisfactorily solved (or that accessibility was not readily achievable) and there was no indication of an underlying problem of compliance with section 255, the matter would be closed by the Commission.

• If it appeared that the complaint did not involve matters subject to section 255, the matter would be closed.

• If it appeared that the complainant's access problem had been satisfactorily resolved but there was an indication of an underlying compliance problem, the Commission would undertake further dispute resolution efforts to determine the nature and magnitude of the problem, and take appropriate action.

• If it appeared that the access problem had otherwise not been satisfactorily resolved, or if the respondent failed to submit a timely resolution report, the Commission would initiate further resolution processes.

58. The NPRM also proposes that the Commission's evaluation of a resolution report not necessarily be limited to the respondent's initial report, but might also include additional information requested from the respondent or the complainant, discussions with accessibility experts from industry, disability groups, or the Access Board, or review of prior or other pending complaints involving the respondent. Further, to the extent a respondent's report asserted that accessibility was not readily achievable, the claim would be evaluated using the same factors that would be used during a phase-two dispute resolution proceeding. The Commission seeks comment on these proposals.

59. The NPRM proposes that the Commission would communicate its determination to both the complainant and the respondent in writing. If the Commission concluded that no further action was warranted because the matter lies outside the scope of section 255, further information may be supplied that would assist the consumer in seeking relief through other possible avenues. If the determination was to proceed to dispute resolution proceedings, pertinent information relating to initiating those processes would be noted. The Commission seeks comment on this aspect of the fast-track proposal.

60. Finally, the NPRM notes that if the Commission's fast-track determination was that the matter should be closed, information would be provided to assist a complainant who disagreed with that determination and wished to pursue the complaint to phase-two dispute resolution. The Commission proposes

not to require any particular method for complainants to communicate their desire to continue to further stages of dispute resolution, but to leave the method to the complainant's discretion, in the same manner as the complaint filing above. The NPRM seeks comment on these proposals.

B. Use of Traditional Dispute Resolution Processes

(1) Informal Dispute Resolution Process

61. For those section 255 complaints that are not resolved under fast-track procedures, the NPRM proposes to resolve most of these complaints pursuant to informal, investigative procedures, which the Commission considers to be more efficient and flexible than formal procedures. To accommodate special circumstances, however, the NPRM also proposes to establish formal adjudicatory procedures, to be employed only where the complainant requests such resolution and the Commission consents. Finally, the Commission also proposes to allow use of alternative dispute resolution procedures in cases in which the Commission and all parties agree that such procedures are appropriate. The NPRM seeks comment on this general procedural framework, and on other specific issues discussed in the full text of the NPRM.

62. The NPRM seeks comment on the Commission's proposal not to impose a standing requirement for complaints under section 255, whether by virtue of being a person with a disability, being a customer of the entity that is the subject of the complaint, or otherwise. The NPRM also proposes not to establish any time limit for the filing of a complaint under section 255. The Commission seeks comment on these proposals, on the relationship of section 415 of the Act to the Commission's complaint authority in section 255, and on the need for regulatory parity between equipment manufacturers and service providers.

63. In order to avoid confusion regarding when a respondent must answer a complaint in the dispute resolution phase, and to provide an efficient transition from the phase-one fast-track process to the phase-two dispute resolution process, the NPRM proposes to specify the due date in the Commission's written notice initiating the dispute resolution phase. Given the likely complexity of many section 255 complaints, the Commission proposes generally to allow 30 days for a respondent to answer a complaint, computed from the date of the written notice. The Commission would, however, retain the discretion to specify a shorter or longer response date based upon the nature of the complaint and the totality of the circumstances. The NPRM also proposes to require that a respondent must serve a copy of the answer on the complainant and on any other entity it implicates in its answer. The NPRM additionally proposes a reply period of 15 calendar days for the person who filed the original pleading to respond to answers, subject to Commission adjustment in specific cases. The NPRM seeks comment on these proposals.

64. In the interest of ensuring that the dispute resolution processes for section 255 are as accessible as possible, the NPRM proposes not to require any particular format for submissions from complainants or respondents. Because telephonic and other non-permanent oral presentations would not provide an appropriate record for decision making, however, the Commission proposes to require that submissions be in a permanent format. The Commission seeks comment on these proposals, and on any other related issues.

65. Commission consideration of section 255 complaints may often involve evaluation of information which may be considered proprietary business data, including a company's resources available to achieve accessibility. The Commission is sensitive to the need to protect the confidentiality of such information, and does not want to discourage its submission where relevant to the decision-making process. The Commission's rules already provide confidentiality for proprietary information in certain cases. (See, e.g., 47 CFR 0.457(d), 0.457(g), 0.459, and 1.731.) The Commission seeks comment on whether, in the particular context of section 255, existing rules and procedures for review of confidentiality requests strike the best balance between reasonable expectations of confidentiality and open decision-making.

(2) Formal Dispute Resolution Process

66. While the Commission anticipates that most complaints not resolved under fast-track procedures will be adjudicated pursuant to the informal procedures previously discussed, the NPRM proposes to reserve the right to apply a more formal, adjudicatory mechanism in which complainants accept the primary burden of pursuing relevant facts, with attendant rights (such as the right of discovery) and obligations. The NPRM is not proposing specific language for section 255 adjudicatory process rules, but proposes to model them on the common carrier formal complaint procedures set out in §§ 1.720 through 1.736 of the Commission's Rules, modified somewhat to take into account the inherent differences between traditional common carrier complaint issues and accessibility issues under section 255, as specified in the full text of the NPRM. The Commission seeks comment on these variations.

67. The NPRM also does not propose to require a filing fee for informal resolution of complaints, or for formal resolution of complaints directed at equipment manufacturers and service providers that are not common carriers. Under the Act, however, the Commission is required to impose a filing fee for formal complaints directed against common carriers, unless it can be demonstrated that waiving the fee would be in the public interest. The NPRM seeks comment on the circumstances under which the Commission should waive or lower this fee, and on other fee-related questions as indicated in the full text of the NPRM.

68. The NPRM finds that section 255 complaints need not be resolved within the five-month deadline established in section 208(b) of the Act. The NPRM finds that, because section 255 establishes Commission authority to prescribe complaint procedures, separate from authority conferred under section 208, any time limits for resolving complaints under section 208 do not apply.

(3) Alternative Dispute Resolution Process

69. The NPRM proposes to make available alternative dispute resolution (ADR) procedures such as arbitration, conciliation, facilitation, mediation, settlement negotiation, and other consensual methods of dispute resolution for resolving section 255 complaints not resolved under the fast-track process. The Commission tentatively concludes that ADR could be an effective tool for dealing with conflicts arising under section 255, while avoiding the expense and the delay of adversarial proceedings. The Commission seeks comment on these views generally, and on related questions as detailed in the full text of the NPRM.

70. Apart from their role in an ADR process, there may be other ways in which neutral parties with special expertise in accessibility matters could help the Commission resolve complaints. Outside experts and committees can perform a valuable consultative function, helping businesses and consumers to develop

accessibility solutions as telecommunications products and services are being developed. The NPRM invites comment on the role that such parties could serve to help speed resolution of complaints.

71. Other groups with accessibility expertise may well develop out of the process by which section 255 is being implemented and as accessibility efforts become more widespread. The Commission might rely on outside experts to gather and evaluate data needed to resolve accessibility questions. The Commission seeks comment on the utility of relying on such experts and on what provisions might be made to accomplish this objective.

(4) Defenses to Complaints

72. In response to an accessibility complaint or an investigation conducted on the Commission's initiative without a prior complaint, the Commission tentatively finds that it seems likely that the most common defenses mounted by a manufacturer or service provider would involve a claim that: (1) The product in question lies beyond the scope of section 255; (2) the product in question is in fact accessible; or (3) accessibility is not readily achievable. The first two defenses are relatively straightforward, but claims of the third kind are likely to present formidable difficulties. The Commission believes it would be useful to set out for comment some tentative views on use of a "readily achievable" defense.

73. To the extent an offering subject to section 255 is not accessible, it is incumbent upon an offeror making a "readily achievable" defense to establish facts to support the claim. In addition to the factors used to determine whether an accessibility action is readily achievable, it is also appropriate to give some weight to evidence that a respondent made good faith efforts to comply with section 255 by taking actions that would tend to increase the accessibility of its product offerings, both generally and with respect to the particular product that is the subject of the complaint. Examples of the sorts of measures that would be credited by the Commission are set out in the Access Board guidelines and in the Appendix to the Access Board Order. The NPRM notes, however, that the Board's guidelines should not be viewed as a "laundry list" of requirements all firms subject to section 255 must adopt. Rather, each firm should consider the guidelines in light of its situation and the degree to which its products have or lack accessibility features, and then adopt those features that will help it provide the accessibility section 255 requires.

74. The Commission seeks comment on these and other accessibility measures that might be suitable for equipment manufacturers. Further, while the Access Board's focus was limited to equipment manufacturers, the measures it describes generally have analogs applicable to service providers. The Commission therefore specifically seeks comment on measures suitable for service providers. In addition, the Commission seeks comment on whether firms subject to section 255 should be required to provide information regarding how consumers can contact them with respect to accessibility issues, and whether such notice should also include information involving how to contact the Commission in case of accessibility problems, and if so, what information should be required and how it should be provided.

C. Penalties for Non-Compliance

75. Section 255, on its face, makes no special provision for penalties for manufacturers or service providers found to violate its requirements. Given the importance of the accessibility mandate, the Commission believes that it should employ the full range of penalties available under the Act in enforcing section 255. The Commission believes that the Act provides for the following sanctions, which the Commission proposes to apply, as appropriate, given the nature and circumstances of a violation:

- Section 503(b) of the Act provides a system of forfeitures for willful or repeated "failure to comply with any of the provisions of [the] Act or of any rule, regulation, or order issued by the Commission under [the] Act * * *."
- At the end of an adjudication, the Commission would usually issue an order setting out its findings and directing prospective corrective measures. It is conceivable these orders might be the result of settlements with respondents, in the nature of consent decrees, if circumstances warrant. In any event, violation of a section 255 order could result in the imposition of a section 503(b) forfeiture.
- Section 312 of the Act provides for the revocation of a station license or construction permit, for the willful or repeated violation of or failure to observe any provision of the Act.
- Section 312 of the Act also provides for the issuance of a cease and desist order directed to a station licensee or construction permit holder, for the willful or repeated violation of or failure to observe any provision of the Act. The Commission believes Sections 4(i) and 208 of the Act provide a basis for such an order with respect to non-licensees.
- Sections 207 and 208 of the Act provide for the award of damages for violations by common carriers and, arguably, others.
- The Commission seeks comment on whether there is a basis for ordering the retrofit of accessibility features into products that were developed without such features, when including them was readily achievable.

The Commission invites comment about these and other possible remedies to enforce section 255 of the Act.

D. Additional Implementation Measures

76. The NPRM notes that other existing Commission processes (and associated forms) may provide efficient vehicles for requirements that may be developed in this proceeding, such as information collection, or for providing notice to firms dealing with the Commission that they may be subject to section 255. The NPRM seeks comment on whether such existing processes might provide additional options for fostering product accessibility. Further, given that sections 207 and 208 of the Act provide an alternate vehicle for submitting complaints that section 255 has been violated, in the case of common carriers, the NPRM seeks comment on whether to modify the existing common carrier complaint rules with respect to section 255 complaints so as to incorporate the kinds of processes the NPRM has proposed for complaints filed under section 255.

77. Finally, the Commission believes there are other measures the Commission itself might take, or might encourage others to take, to foster increased accessibility of telecommunications products. These include:

- Establishment of a clearinghouse for current information regarding telecommunications disabilities issues.
- Publication of information regarding the performance of manufacturers and service providers in providing accessible products, perhaps based on statistics generated through the fast-track and dispute resolution processes.
- Expansion of the information provided on the Internet at the Commission's Disabilities Issues Task Force Web site (http://www.fcc.gov/dtf).
- Efforts by consumer and industry groups to establish ongoing informational and educational programs, product and service certification, standards-setting, and other measures aimed at bridging the gap between disabilities needs and telecommunications solutions.

• Development of peer review processes to complement the proposed implementation measures.

The Commission particularly invites comment regarding the practical aspects of implementing these or other similar implementation measures.

IV. Interim Treatment of Complaints

78. As noted earlier, section 255 became effective upon enactment on February 8, 1996. Until the Commission adopts procedural rules in this proceeding, complaints alleging violations of section 255 may be filed pursuant to Section 1.41 of the Commission's Rules (47 CFR 141) and other general procedural rules (47 CFR 1.45–1.52). Complaints against common carriers may also be filed pursuant to the common carrier complaint rules set out in Part 1, Subpart E of the Commission's Rules (See 47 CFR 1.711, 1.716–1.718, 1.720–1.736).

79. Because the Commission has existing complaint processes in place which enable it to address complaints on a case-by-case basis, the NPRM declines to establish interim rules. Furthermore, the NPRM does not find it necessary to establish specific interim procedures.

80. Although the Commission recognizes that the proposals set forth in the NPRM have no binding effect until formally adopted, they may serve as guidance to parties concerning factors the Commission would likely consider in a complaint proceeding. The Commission urges potential complainants and defendants to take particular note of interpretations of key terminology and the emphasis on accessibility analysis throughout the design process. In addition, the Access Board guidelines and the related Appendix materials may be instructive to affected entities in determining their obligations under section 255 during this interim period.

V. Administrative Matters

A. Ex Parte Presentations

81. The NPRM is a "permit-but-disclose" notice and comment rulemaking proceeding. *Ex parte* presentations are permitted, provided they are disclosed as provided in Commission rules. See generally 47 CFR 1.1202 , 1.1203, 1.1206(a).

B. Initial Regulatory Flexibility Analysis

82. As required by section 603 of the Regulatory Flexibility Act, the Commission has prepared the following Initial Regulatory Flexibility Analysis (IRFA) of the expected impact on small entities of the proposals suggested in this document. Written public comments are requested on the IRFA. These comments must be filed in accordance with the same filing deadlines as comments on the rest of the NPRM but they must have a separate and distinct heading designating them as responses to the IRFA. The Commission's Office of Public Affairs, Reference Operations Division, shall send a copy of the NPRM, including the IRFA, to the Chief Counsel for Advocacy of the Small Business Administration in accordance with paragraph 603(a) of the Regulatory Flexibility Act. Public Law 96–354, 94 Stat. 1164, 5 U.S.C. 601 *et seq.* (1981).

(1) Need for, and Objectives of, Proposed Action

83. This rulemaking proceeding was initiated to propose means of implementing and enforcing section 255 of the Act, as added by the Telecommunications Act of 1996. This section is intended to ensure that telecommunications equipment and services will be accessible to persons with disabilities, if such accessibility is readily achievable. If accessibility is not readily achievable, then the telecommunications equipment and services are to be made compatible with specialized customer premises equipment or peripheral devices to the extent that so doing is readily achievable.

84. Given the fundamental role that telecommunications has come to play in today's world, the provisions of section 255 represent the most significant governmental action for people with disabilities since the passage of the Americans with Disabilities Act of 1990. Public Law 101–336, 104 Stat. 327 (1990) (codified at 42 U.S.C. 12102(2)(A), 12181(9)) (ADA). Inability to use telecommunications equipment and services can be life-threatening in emergency situations, can severely limit educational and employment opportunities, and can otherwise interfere with full participation in business, family, social, and other activities. The Commission must do all it can to ensure that people with disabilities are not left behind in the telecommunications revolution and consequently isolated from contemporary life.

85. The Commission sets forth proposals to implement and enforce the requirement of section 255 that telecommunications offerings be accessible to the extent readily achievable. The centerpiece of these is a "fast-track" process designed to resolve many accessibility complaints informally, providing consumers quick solutions and freeing manufacturers and service providers from the burden of more structured complaint resolution procedures. In cases where fast-track solutions are not possible, however, or where there appears to be an underlying noncompliance with section 255, the Commission would pursue remedies through more conventional processes. In both cases, in assessing whether service providers and equipment manufacturers have met their accessibility obligations under section 255, the Commission would look favorably upon demonstrations by companies that they considered accessibility throughout the development of telecommunications products.

(2) Legal Basis

86. The proposed action is authorized under sections 1, 4(i), 10, 201, 202, 207, 208, 255, 303(b), 303(g), 303(j), 303(r) and 403 of the Communications Act, 47 U.S.C. 151, 154(i), 160, 201, 202, 207, 208, 255, 303(b), 303(g), 303(j), 303(r), 403.

(3) Description and Number of Small Entities Involved

87.The NPRM will apply to manufacturers of telecommunications equipment and customer premises equipment (CPE). In addition, telecommunications service providers of many types will be affected, including wireline common carriers and commercial mobile radio service (CMRS) providers. To the extent that software is integral to a telecommunication function, software developers or manufacturers may also be affected.

88. Commenters are requested to provide information regarding how many entities (overall) and how many small entities would be affected by the proposed rules in the NPRM. It should be noted that the resources of the regulated entity are taken into account in the determination of whether accessibility of a given product or service is readily achievable. Thus, there is an inherent consideration of the financial burden on the entity in its obligation to provide accessibility: if not readily achievable, the legal obligation is removed. However, all regulated entities are required to assess whether providing accessibility is readily achievable. Thus, an important issue for RFA purposes is not the absolute cost of providing accessibility, but, rather, the extent to which the cost of performing an assessment as to whether an accessibility feature is readily achievable is unduly burdensome on small entities.

89. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction." In addition, the term "small business" has the same meaning as the term "small business concern" under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA). [11] A small organization is generally "any not-for-profit enterprise which is independently owned and operated and is not dominant in its field." [12] Nationwide, as of 1992, there were approximately 275,801 small organizations. [13] The Commission further describes and estimates the number of small entity licensees and other covered entities that may be affected by the proposed rules, if adopted.

a. *Equipment manufacturers.* 90. The following chart contains estimated numbers of domestic entities that may be affected by this rulemaking. The data from which this chart was developed includes firm counts that reflect product lines not involved in telecommunications, as defined by the 1996 Act, and also includes overlapping firm counts and firms deliberately commingled to avoid disclosing the value of individual firms' equipment shipments for the reporting period.

Product class/ code	Product description	Estimated firm count	Comments
36611	Switching and switchboard equipment.	84	Includes central office switching equipment, PBX equipment, cellular mobile switching equipment.
36613	Carrier line equipment and modems	89	Includes repeaters, multiplex equipment, channel banks, subscriber loop and carrier line equipment, and modems.
36614	Other telephone and telegraph equipment.	215	Includes single line, ISDN, key and public pay telephone sets, cordless handsets, data communications equipment, video conferencing equipment, voice and call message processing equipment, call distributors, facsimile equipment.
36631	Communications systems and equipment.	346	Includes mobile cellular equipment, conventional and trunked system equipment, SONET-standard equipment.
36632	Broadcast, studio, and related electronic equipment.	172	Includes cable equipment possibly used to provide telephone service, such as subscriber equipment.
35715	Personal computers and workstations.	89	Includes personal computers with CPE capabilities.
35716	Portable computers	35	Typically with attached display.
35771	Computer peripheral equipment, not elsewhere classified.	259	Excludes common storage, scanning, and other peripherals itemized in census source document. Intended to include peripherals used for telecommunication function, and specialized CPE used in conjunction with computers. Includes keyboards, manual input devices such as mouses and scanners, voice recognition equipment (88 firms).
36798	Printed circuit assemblies	648	Includes communications printed board assemblies (211 firms) and "other electronics," including office equipment and point of sales (182 firms) that would commonly involve telecommunications functions.
35751	Computer terminals	57	Includes remote batch terminals, displays, etc. For distributed computer systems involved in telecommunications, remote terminals and other components are probably essential to ensuring accessible telecommunications capabilities.
35772	Parts and subassemblies for computer peripherals and input/output equipment.	72	Includes funds transfer devices and point of sale terminals (29 firms).

b. Software. 91. Due to the convergence between telecommunications equipment, telecommunications services and the software used to control and regulate each, software developers and producers may be viewed as regulated entities under section 255. This is particularly true of software that is used to make traditional telecommunications devices operate with CPE designed for specific disabilities. The Commission seeks comment on the impact of its proposed rules on the small businesses within this industrial category.

c. Telecommunications service entities. (i) Introduction. 92. Commenters are requested to provide information regarding how many providers of telecommunications services, existing and potential, will be considered small businesses. The SBA has defined a small business for Radiotelephone Communications (SIC 4812) and Telephone Communications, Except Radiotelephone (SIC 4813), to be small entities when they have fewer than 1,500 employees.

93. The Commission seeks comment as to whether this definition is appropriate in this context. Additionally, the Commission requests each commenter to identify whether it is a small business under this definition. If the commenter is a subsidiary of another entity, this information should be provided for both the subsidiary and the parent corporation or entity.

94. The United States Bureau of the Census reports that, at the end of 1992, there were 3,497 firms engaged in providing telephone services, for at least one year. This number contains a variety of different categories of carriers, including local exchange carriers, interexchange carriers, competitive access providers, cellular carriers, other mobile service carriers, operator service providers, pay telephone providers, personal communications services (PCS) providers, covered specialized mobile

[11] Small Business Act, 15 U.S.C. 632 (1996).
[12] 5 U.S.C. 601(4).
[13] 1992 Economic Census, U.S. Bureau of the Census, Table 6 (special tabulation of data under contract to Office of Advocacy of the U.S. Small Business Administration).

radio providers, and resellers. It seems certain that some of those 3,497 telephone service firms may not qualify as small entities or small incumbent local exchange carriers (LECs) because they are not "independently owned and operated." For example, a PCS provider that is affiliated with an interexchange carrier (IXC) having more than 1,500 employees would not meet the definition of a small business. The Commission tentatively concludes that fewer than 3,497 telephone service firms are small entity telephone service firms or small incumbent local exchange carriers.

95. According to the Telecommunications Industry Revenue: Telecommunications Relay Service Fund Worksheet Data (*TRS Worksheet*), there are 3,459 interstate carriers.[14] These carriers include, *inter alia*, local exchange carriers, wireline carriers and service providers, interexchange carriers, competitive access providers, operator service providers, pay telephone providers, providers of telephone toll service, providers of telephone exchange service, and resellers.

(ii) Wireline Carriers and Service Providers. 96. The SBA has developed a definition of small entities for telephone communications companies except radiotelephone (wireless) companies. The Census Bureau reports that, there were 2,321 such telephone companies in operation for at least one year at the end of 1992.[15] According to the SBA definition, as noted, a small business telephone company other than a radiotelephone company is one employing fewer than 1,500 persons. All but 26 of the 2,321 non-radiotelephone companies listed by the Census Bureau were reported to have fewer than 1,000 employees.

97. Thus, even if all 26 of those companies had more than 1,500 employees, there would still be 2,295 non-radiotelephone companies that might qualify as small entities or small incumbent LECs. The Commission does not have information regarding the number of carriers that are not independently owned and operated, and thus is unable at this time to estimate with greater precision the number of wireline carriers and service providers that would qualify as small business concerns under the SBA definition. Consequently, the Commission estimates that there are fewer than 2,295 small telephone communications companies other than radiotelephone companies.

(A) Incumbent Local Exchange Carriers. 98. Neither the Commission nor SBA has developed a definition for small providers of local exchange services. The closest applicable definition under the SBA rules is for telephone communications companies other than radiotelephone (wireless) companies. The most reliable source of information regarding the number of LECs nationwide of which the Commission is aware appears to be the data that the Commission collects annually in connection with the *TRS Worksheet*. According to the Commission's most recent data, 1,376 companies reported that they were engaged in the provision of local exchange services. Although it seems certain that some of these carriers are not independently owned and operated, or have more than 1,500 employees, the Commission is unable at this time to estimate with greater precision the number of LECs that would qualify as small business concerns under the SBA definition. Consequently, the Commission estimates that there are fewer than 1,376 small incumbent LECs.

99. Because the small incumbent LECs subject to these rules are either dominant in their field of operations or are not independently owned and operated, they are excluded (consistent with the Commission's prior practice) from the definition of "small entity" and "small business concerns." Accordingly, the Commission's use of the terms "small entities" and "small businesses" does not encompass small incumbent LECs. Out of an abundance of caution, however, for regulatory flexibility analysis purposes, the Commission will consider small incumbent LECs within this analysis and use the term "small incumbent LECs" to refer to any incumbent LEC that arguably might be defined by SBA as a "small business concern."

(B) Interexchange Carriers. 100. Neither the Commission nor SBA has developed a definition of small entities specifically applicable to providers of interexchange services. The closest applicable definition under the SBA rules is for telephone communications companies except radiotelephone (wireless) companies. The most reliable source of information regarding the number of IXCs nationwide is the data that the Commission collects annually in connection with the *TRS Worksheet*. According to the Commission's most recent data, 149 companies reported that they were engaged in the provision of interexchange services. The Commission does not have information on the number of carriers that are not independently owned and operated, nor have more than 1,500 employees, and thus the Commission is unable at this time to estimate with greater precision the number of IXCs that would qualify as small business concerns under the SBA definition. Consequently, the Commission estimates that there are fewer than 149 small entity IXCs.

(C) Competitive Access Providers and Competitive Local Exchange Carriers. 101. Neither the Commission nor SBA has developed a definition of small entities specifically applicable to providers of competitive access services (CAPs) and competitive local exchange carriers (CLECs). The closest applicable definition under the SBA rules is for telephone communications companies except radiotelephone (wireless) companies. The most reliable source of information regarding the number of CAPs and CLECs nationwide is the data that the Commission collects annually in connection with the *TRS Worksheet*. According to the Commission's most recent data, 119 companies reported that they were engaged in the provision of competitive access services. The Commission does not have information on the number of carriers that are not independently owned and operated, nor have more than 1,500 employees, and thus is unable at this time to estimate with greater precision the number of CAPs that would qualify as small business concerns under the SBA definition. Consequently, the Commission estimates that there are fewer than 119 small CAPs.

(D) Operator Service Providers. 102. Neither the Commission nor SBA has developed a definition of small entities specifically applicable to providers of operator services. The closest applicable definition under the SBA rules is for telephone communications companies except radiotelephone (wireless) companies. The most reliable source of information regarding the number of operator service providers nationwide is the data that the Commission collects annually in connection with the *TRS Worksheet*. According to the Commission's most recent data, 27 companies reported that they were engaged in the provision of operator services. The Commission does not have information on the number of carriers that are not independently owned and operated, nor have more than 1,500 employees, and thus is unable at this time to estimate with greater precision the number of operator service

[14] Federal Communications Commission, Common Carrier Bureau, Industry Analysis Division, Carrier Locator: Interstate Service Providers, Figure 1 (Types of Interstate Service Providers) (Nov. 1997) (*TRS Data*).

[15] U.S. Department of Commerce, Bureau of the Census, 1992 Census of Transportation, Communications, and Utilities: Establishment and Firm Size, at Firm Size 1–123 (1995) (1992 Census).

VOL 63 ISS 99 MY 22 1998 UMI

providers that would qualify as small business concerns under the SBA definition. Consequently, the Commission estimates that there are fewer than 27 small operator service providers.

(E) Pay Telephone Providers. 103. Neither the Commission nor SBA has developed a definition of small entities specifically applicable to pay telephone providers. The closest applicable definition under SBA rules is for telephone communications companies except radiotelephone (wireless) companies. The most reliable source of information regarding the number of pay telephone providers nationwide is the data that the Commission collects annually in connection with the *TRS Worksheet*. According to the Commission's most recent data, 533 companies reported that they were engaged in the provision of pay telephone services. The Commission does not have information on the number of carriers that are not independently owned and operated, nor have more than 1,500 employees, and thus is unable at this time to estimate with greater precision the number of pay telephone providers that would qualify as small business concerns under SBA definition. Consequently, the Commission estimates that there are fewer than 533 small pay telephone providers.

(F) Resellers (Including Debit Card Providers). 104. Neither the Commission nor SBA has developed a definition of small entities specifically applicable to resellers. The closest applicable SBA definition for a reseller is a telephone communications company except radiotelephone (wireless) companies. However, the most reliable source of information regarding the number of resellers nationwide is the data that the Commission collects annually in connection with the *TRS Worksheet*. According to the Commission's most recent data, 345 companies reported that they were engaged in the resale of telephone service. The Commission does not have information on the number of carriers that are not independently owned and operated, nor have more than 1,500 employees, and thus the Commission is unable at this time to estimate with greater precision the number of resellers that would qualify as small entities or small incumbent LEC concerns under the SBA definition. Consequently, the Commission estimates that there are fewer than 345 small entity resellers.

(iii) International Service Providers. 105. The Commission has not developed a definition of small entities applicable to licensees in the international services. Therefore, the applicable definition of small entity is the definition under the SBA rules applicable to Communications Services, Not Elsewhere Classified (NEC) (13 CFR 120.21). This definition provides that a small entity is expressed as one with $11.0 million or less in annual receipts. According to the Census Bureau, there were a total of 848 communications services, NEC, in operation in 1992, and a total of 775 had annual receipts of less than $9.999 million. The Census report does not provide more precise data. Many of these services do not have specified uses and it is uncertain, at this point in time, if they will ultimately provide telecommunications services.

(A) International Public Fixed Radio (Public and Control Stations). 106. There are 15 licensees in this service. The Commission does not request or collect annual revenue information, and thus is unable to estimate the number of international public fixed radio licensees that would constitute a small business under the SBA definition.

(B) Fixed Satellite Transmit/Receive Earth Stations. 107. There are approximately 4,200 earth station authorizations, a portion of which are Fixed Satellite Transmit/Receive Earth Stations. The Commission does not request or collect annual revenue information, and thus is unable to estimate the number of the earth stations that would constitute a small business under the SBA definition.

(C) Fixed Satellite Small Transmit/Receive Earth Stations. 108. There are 4,200 earth station authorizations, a portion of which are Fixed Satellite Small Transmit/Receive Earth Stations. The Commission does not request or collect annual revenue information, and thus is unable to estimate the number of fixed satellite transmit/receive earth stations may constitute a small business under the SBA definition.

(D) Fixed Satellite Very Small Aperture Terminal (VSAT) Systems. 109. These stations operate on a primary basis, and frequency coordination with terrestrial microwave systems is not required. Thus, a single "blanket" application may be filed for a specified number of small antennas and one or more hub stations. The Commission has processed 377 applications. The Commission does not request or collect annual revenue information, and thus is unable to estimate of the number of VSAT systems that would constitute a small business under the SBA definition.

(E) Mobile Satellite Earth Stations. 110. There are two licensees. The Commission does not request or collect annual revenue information, and thus is unable to estimate whether either of these licensees would constitute a small business under the SBA definition.

(F) Space Stations (Geostationary). 111. Commission records reveal that there are 37 space station licensees. The Commission does not request or collect annual revenue information, and thus is unable to estimate of the number of geostationary space stations that would constitute a small business under the SBA definition.

(G) Space Stations (Non-Geostationary). 112. There are six Non-Geostationary Space Station licensees, of which only one system is operational. The Commission does not request or collect annual revenue information, and thus is unable to estimate of the number of non-geostationary space stations that would constitute a small business under the SBA definition.

(iv) Wireless Telecommunications Service Providers. 113. The Commission has not yet developed a definition of small entities with respect to the provision of CMRS services. Therefore, for entities not falling within other established SBA categories (*i.e.*, Radiotelephone Communications or Telephone Communications, Except Radiotelephone), the applicable definition of small entity is the definition under the SBA rules applicable to the "Communications Services, Not Elsewhere Classified" category. This definition provides that a small entity is one with $11.0 million or less in annual receipts (13 CFR 120.21). The Census Bureau estimates indicate that of the 848 firms in the "Communications Services, Not Elsewhere Classified" category, 775 are small businesses. It is not possible to predict which of these would be small entities (in absolute terms or by percentage) or to classify the number of small entities by particular forms of service.

(A) Cellular Radio Telephone Service. 114. The Commission has not developed a definition of small entities applicable to cellular licensees. Therefore, the applicable definition of small entity is the definition under the SBA rules applicable to radiotelephone companies. This definition provides that a small entity is a radiotelephone company employing no more than 1,500 persons. The size data provided by SBA does not enable the Commission to make a meaningful estimate of the number of cellular providers which are small entities because it combines all radiotelephone companies with 500 or more employees.

115. The Commission therefore has used the 1992 Census of Transportation, Communications, and Utilities,

conducted by the Bureau of the Census, which is the most recent information available. That census shows that only 12 radiotelephone firms out of a total of 1,178 such firms which operated during 1992 had 1,000 or more employees. Therefore, even if all 12 of these large firms were cellular telephone companies, all of the remainder were small businesses under the SBA definition. The Commission assumes that, for purposes of its evaluations and conclusions in this IRFA, all of the current cellular licensees are small entities, as that term is defined by SBA. In addition, although there are 1,758 cellular licenses, the Commission does not know the number of cellular licensees, since a cellular licensee may own several licenses.

(B) Broadband Personal Communications Service. 116. The broadband PCS spectrum is divided into six frequency blocks designated A through F. Pursuant to Section 24.720(b) of the Commission's Rules, the Commission has defined "small entity" for Block C and Block F licensees as firms that had average gross revenues of less than $40 million in the three previous calendar years. This regulation defining "small entity" in the context of broadband PCS auctions has been approved by SBA.

117. The Commission has auctioned broadband PCS licenses in all of its spectrum blocks A through F. The Commission does not have sufficient data to determine how many small businesses under the Commission's definition bid successfully for licenses in Blocks A and B. As of now, there are 89 non-defaulting winning bidders that qualify as small entities in the Block C auction and 93 non-defaulting winning bidders that qualify as small entities in the D, E, and F Block auctions. Based on this information, the Commission concludes that the number of broadband PCS licensees that would be affected by the proposals in the NPRM includes the 182 non-defaulting winning bidders that qualify as small entities in the C, D, E, and F Block broadband PCS auctions. Note that the number of successful bidders is not necessarily equivalent to the number of licensees, yet it is the best indicator that is currently available.

(C) Specialized Mobile Radio. 118. Pursuant to Section 90.814(b)(1) of the Commission's Rules, the Commission has defined "small entity" for geographic area 800 MHz and 900 MHz Specialized Mobile Radio (SMR) licenses as firms that had average gross revenues of less than $15 million in the three previous calendar years. This regulation defining "small entity" in the context of 800 MHz and 900 MHz SMR has been approved by SBA.

119. The proposals set forth in the NPRM may apply to SMR providers in the 800 MHz and 900 MHz bands. The Commission does not know how many firms provide 800 MHz or 900 MHz geographic area SMR service, or how many of these providers have annual revenues of less than $15 million.

120. The Commission recently held auctions for geographic area licenses in the 900 MHz SMR band. There were 60 winning bidders who qualified as small entities under the Commission's definition in the 900 MHz auction. Based on this information, the Commission concludes that the number of geographic area SMR licensees affected by the proposals set forth in the NPRM includes these 60 small entities.

121. Based on the auctions held for 800 MHz geographic area SMR licenses, there were 10 small entities currently holding 38 of the 524 licenses for the upper 200 channels of this service. However, the Commission has not yet determined how many licenses will be awarded for the lower 230 channels in the 800 MHz geographic area SMR auction. There is no basis to estimate, moreover, how many small entities within the SBA definition will win these licenses. Given the facts that nearly all radiotelephone companies have fewer than 1,000 employees and that no reliable estimate of the number of prospective 800 MHz SMR licensees can be made, the Commission assumes, for purposes of its evaluations and conclusions in this IRFA, that all of the licenses will be awarded to small entities, as that term is defined by SBA.

(D) 220 MHz Service.

122. Licensees for 220 MHz services that meet the definition of CMRS may be providers of telecommunications service. The Commission has classified providers of 220 MHz service into Phase I and Phase II licensees. There are approximately 3,800 non-nationwide Phase I licensees and 4 nationwide licensees currently authorized to operate in the 220 MHz band. The Commission has estimated that there are approximately 900 potential Phase II licensees. These licenses were scheduled to be auctioned in May 1998, but the auction has been delayed pending resolution of petitions for reconsideration.

123. At this time, however, there is no basis upon which to estimate definitively the number of 220 MHz service licensees, either current or potential, that are small businesses. To estimate the number of such entities that are small businesses, the Commission applies the definition of a small entity under SBA rules applicable to radiotelephone companies. This definition provides that a small entity is a radiotelephone company employing no more than 1,500 persons. However, the size data provided by the SBA do not allow the Commission to make a meaningful estimate of the number of 220 MHz providers that are small entities because they combine all radiotelephone companies with 500 or more employees.

124. The Commission therefore uses the 1992 Census of Transportation, Communications, and Utilities, conducted by the Bureau of the Census, which is the most recent information available. Data from the Census Bureau's 1992 study indicate that only 12 out of a total 1,178 radiotelephone firms which operated during 1992 had 1,000 or more employees—and these may or may not be small entities, depending on whether they employed more or less than 1,500 employees. But 1,166 radiotelephone firms had fewer than 1,000 employees and, therefore, under the SBA definition, are small entities. However, the Commission does not know how many of these 1,166 firms are likely to be involved in the provision of 220 MHz service.

(E) Mobile Satellite Services (MSS).

125. Mobile Satellite Services or Mobile Satellite Earth Stations are intended to be used while in motion or during halts at unspecified points. These stations operate as part of a network that includes a fixed hub or stations. The stations that are capable of transmitting while a platform is moving are included under Section 20.7(c) of the Commission's Rules as mobile services within the meaning of sections 3(27) and 332 of the Act. Those MSS services are treated as CMRS if they connect to the Public Switched Network (PSN) and also satisfy other criteria of section 332. Facilities provided through a transportable platform that cannot move when the communications service is offered are excluded from 47 CFR 20.7(c).

126. The MSS networks may provide a variety of land, maritime and aeronautical voice and data services. There are eight mobile satellite licensees. At this time, the Commission is unable to make a precise estimate of the number of small businesses that are mobile satellite earth station licensees and could be considered CMRS providers of telecommunications service.

(F) Paging. 127. Private and Common Carrier Paging. The Commission has proposed a two-tier definition of small businesses in the context of auctioning licenses in the Common Carrier Paging

and exclusive Private Carrier Paging services. Under the proposal, a small business will be defined as either (1) an entity that, together with its affiliates and controlling principals, has average gross revenues for the three preceding years of not more than $3 million; or (2) an entity that, together with affiliates and controlling principals, has average gross revenues for the three preceding calendar years of not more than $15 million. Because the SBA has not yet approved this definition for paging services, the Commission will utilize the SBA's definition applicable to radiotelephone companies, *i.e.*, an entity employing no more than 1,500 persons. At present, there are approximately 24,000 Private Paging licenses and 74,000 Common Carrier Paging licenses. According to the most recent Telecommunications Industry Revenue data, 364 carriers reported that they were engaged in the provision of either paging or other mobile services, which are placed together in the data. The Commission does not have data specifying the number of these carriers that are not independently owned and operated or have more than 1,500 employees, and thus is unable at this time to estimate with greater precision the number of paging carriers that would qualify as small business concerns under the SBA's definition. Consequently, the Commission estimates that there are fewer than 364 small paging carriers that may be affected by the proposed rules, if adopted. The Commission estimates that the majority of private and common carrier paging providers would qualify as small entities under the SBA definition.

(G) Narrowband PCS. 128. The Commission has auctioned nationwide and regional licenses for narrowband PCS. The Commission does not have sufficient information to determine whether any of these licensees are small businesses within the SBA-approved definition. At present, there have been no auctions held for the MTA and Basic Trading Area (BTA) narrowband PCS licenses. The Commission anticipates a total of 561 MTA licenses and 2,958 BTA licenses will be awarded in the auctions. Those auctions, however, have not yet been scheduled. Given that nearly all radiotelephone companies have fewer than 1,500 employees and that no reliable estimate of the number of prospective MTA and BTA narrowband licensees can be made, the Commission assumes that all of the licenses will be awarded to small entities, as that term is defined by the SBA.

(H) Air-Ground Radiotelephone Service. 129. The Commission has not adopted a definition of small business specific to the Air-Ground Radiotelephone Service, which is defined in Section 22.99 of the Commission's rules. Accordingly, the Commission will use the SBA definition applicable to radiotelephone companies, *i.e.*, an entity employing no more than 1,500 persons. There are approximately 100 licensees in the Air-Ground Radiotelephone Service, and the Commission estimates that almost all of them qualify as small under the SBA definition.

(I) Local Multipoint Distribution Service (LMDS). 130. LMDS licensees may use spectrum for any number of services. It is anticipated that the greatest intensity of use will be for either radio telephone or pay television services. SBA has developed definitions applicable to each of these services, however, because pay television is not a telecommunications service subject to section 255, it is not relevant to this IRFA.

131. The Commission has not developed a definition of small entities applicable to LMDS licensees, which is a new service. In the LMDS Order (62 FR 16514, Apr. 7, 1997) the Commission adopted criteria for defining small businesses for determining bidding credits in the auction, but the Commission believes these criteria are applicable for evaluating the burdens imposed by section 255. The Commission defines a small business as an entity that, together with affiliates and controlling principals, has average gross revenues not exceeding $40 million for the three preceding years. Additionally, small entities are those which together with affiliates and controlling principals, have average gross revenues for the three preceding years of more than $40 million but not more than $75 million.

132. Upon completion of the auction 93 of the 104 bidder qualified as small entities, smaller businesses, or very small businesses. These 93 bidders won 664 of the 864 licenses. The Commission estimates that all of these 93 bidders would qualify as small under the SBA definitions, but the Commission cannot yet determine what percentage would be offering telecommunications services.

(J) Rural Radiotelephone Service. 133. The Commission has not adopted a definition of small entity specific to the Rural Radiotelephone Service. A significant subset of the Rural Radiotelephone Service is the Basic Exchange Telephone Radio Systems (BETRS). The Commission will use the SBA's definition applicable to radiotelephone companies, i.e., an entity employing no more than 1,500 persons. There are approximately 1,000 licensees in the Rural Radiotelephone Service, and the Commission estimates that almost all of them qualify as small entities under the SBA's definition.

(K) Wireless Communications Services. 134. This service can be used for fixed, mobile, radiolocation and digital audio broadcasting satellite uses. The Commission defined small business for the wireless communications services (WCS) auction as an entity with average gross revenues of $40 million for each of the three preceding years, and a very small business as an entity with average gross revenues of $15 million for each of the three preceding years. The Commission auctioned geographic area licenses in the WCS service. In the auction, there were seven winning bidders that qualified as very small business entities, and one that qualified as a small business entity. The Commissin concludes that the number of geographic area WCS licensees affected includes these eight entities.

(L) 39 GHz Band. 135. The Commission has not developed a definition of small entities applicable to 39 GHz band licensees. Therefore, the applicable definition of small entity is the definition under the SBA rules applicable to radiotelephone companies. This definition provides that a small entity is a radiotelephone company employing no more than 1,500 persons. Since the Regulatory Flexibility Act amendments were not in effect until the record in this proceeding was closed, the Commission was unable to request information regarding the potential number of small businesses interested in the 39 GHz frequency band and is unable at this time to determine the precise number of potential applicants which are small businesses.

136. The size data provided by SBA does not enable the Commission to make a meaningful estimate of the number of cellular providers which are small entities because it combines all radiotelephone companies with 500 or more employees.[16] The Commission therefore has used the 1992 Census of Transportation, Communications, and Utilities, conducted by the Bureau of the Census, which is the most recent information available. That census shows that only 12 radiotelephone firms out of a total of 1,178 such firms which operated during 1992 had 1,000 or more

[16] U.S. Small Business Administration 1992 Economic Census Employment Report, Bureau of the Census, U.S. Department of Commerce, SIC 4812 (radiotelephone communications industry data adopted by the SBA Office of Advocacy).

employees. Therefore, a majority of 39 GHz entities providing radiotelephone services could be small businesses under the SBA definition.

137. However, in the 39 GHz Band NPRM and Order, 61 FR 02452, Jan. 26, 1996, the Commission proposed to define a small business as an entity that, together with affiliates and attributable investors, has average gross revenues for the three preceding years of less than $40 million. The Commission has not yet received approval by the SBA for this definition. The Commission assumes, for purposes of its evaluations, that nearly all of the 39 GHz licensees will be small entities, as that term is defined by the SBA.

(4) Reporting, Recordkeeping, and Other Compliance Requirements

138. As the Commission has noted, the objective of section 255 is for persons with disabilities to have increased access to telecommunications. Both equipment manufacturers and telecommunications service providers are obligated to provide accessibility for persons with any one or more of different disabilities to the extent that it is readily achievable for them to do so. So, in the broadest sense, compliance consists of the on-going, disciplined, and systematic effort to provide the greatest level of accessibility. Much of the NPRM deals with behaviors which demonstrate that such effort and would be looked upon favorably in the event of a filed complaint.

139. The only actual recordkeeping requirement that the Commission proposes is for each covered entity to provide a point of contact for referral of consumer problems. This person would represent the covered entity during the "fast-track problem-solving" phase which would precede the filing of any form of complaint. In the NPRM, the Commission suggests and seeks comment on a one-week period in which the manufacturer or service provider should resolve the customer's problem. Although the Commission wishes to encourage speedy responses, it recognizes that there may be circumstances which call for an extension of the time period. In such instances, the Commission reserves the discretion to grant requests. The Commission seeks comment on whether the one-week time period, and whether the informal means of requesting extensions would be disproportionately burdensome on small businesses.

140. Despite the lack of any formal recordkeeping requirement, in order to respond to "fast-track" inquiries, companies may chose to keep records at their own discretion on the way the company has chosen to implement its own disability initiatives. This self-imposed recordkeeping will enable them to respond in a more timely fashion. Likewise the Commission seeks comment on whether this implicit burden needs to be recognized, and, if so, whether there is a disproportionate impact on small businesses.

141. An additional recordkeeping requirement for which the Commission seeks comment would be to have equipment manufacturers acknowledge their section 255 obligations on the same form used for filing for equipment authorization with the Office of Engineering and Technology. (See 47 CFR 2.901–2.1093.) Similarly, the Commission seeks comment on which of the filings for telecommunications service providers would provide a comparable opportunity to indicate awareness of their own section 255 obligations. Another option, beyond the scope of section 255 and thus requiring a separate rulemaking, might be to design a consolidated form to be used by service providers for reporting all required information to the Commission and including awareness of entities' section 255 obligations as one small part. Although the Commission perceives the section 255 reporting burden to be minimal, as in checking off a box on a form required for other purposes, the Commission requests comment on how such requirements can be modified to reduce the burden on small entities and still meet the objectives of this proceeding.

(5) Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

142. In the Notice of Inquiry, the Commission sought comment on three possible approaches for implementing and enforcing the provisions of section 255: (1) Rely on case-by-case determinations; (2) issue guidelines or a policy statement; or (3) promulgate rules setting forth procedural or performance requirements intended to promote accessibility.[17]

143. The NPRM principally proposes procedural requirements as a practical, common sense means to ensure that consumers with disabilities have access to telecommunications services and equipment.

144. The use of case-by-case determinations exclusively, in lieu of any rules, was considered but tentatively discarded in the NPRM because it was believed that in a rapidly changing market with unpredictable technological breakthroughs, the slow development of case law would not be sufficient to guide covered entities to an understanding of their accessibility obligations.

145. The issuance of guidelines or a policy statement was also considered but tentatively discarded, because of the Commission's view that a greater degree of regulatory and administrative certainty will best serve the interests of both consumers and businesses (including covered entities) that must comply with section 255. Guidelines or a policy statement might serve the purpose of informing case-by-case determinations in complaint proceedings and lending some predictability of outcomes in these proceedings. Moreover, the Commission tentatively decided that, in order for accessibility to be addressed in a pro-active manner, equipment manufacturers and service providers should have clear expressions of the demands section 255 places on their operations before the beginning of the design process. The Commission tentatively concluded, however, that the potential drawbacks of exclusive reliance on case-by-case determinations as a means of implementing section 255 would not be sufficiently diminished by the adoption of guidelines or a policy statement.

146. Also considered and tentatively rejected by the Commission was the option of promulgating specific performance requirements. Such an approach—under which the Commission would attempt to establish an array of specific parameters for features and functions across a broad range of telecommunications services and equipment—was viewed as potentially burdensome to covered entities, as well as being fraught with other potential problems. For example, rapid changes in technology could make Commission performance requirements obsolete in rapid fashion. This would make it necessary for the Commission to frequently revise its performance requirements in order to attempt to keep pace with these technological changes. These frequent revisions would impose burdens on covered entities and potentially cause confusion in the telecommunications marketplace. In addition, the Commission tentatively has decided that the promulgation of rules governing the design process, would impose burdens on covered entities whose resources would be better

[17] Implementation of Section 255 of the Telecommunications Act of 1996: Access to Telecommunications Services, Telecommunications Equipment, and Customer Premises Equipment by Persons with Disabilities, WT Docket No. 96–198, Notice of Inquiry, 11 FCC Rcd 19152, 19163 (para. 7) (1996) (*Notice of Inquiry*).

spent in achieving and improving accessibility.

147. As a result of the Commission's tentative decision to rely primarily on procedural rules, it has taken several steps to minimize burdens on all regulated entities. First, the Commission has sought to provide incentives to industry for early and on-going consideration of accessibility issues. In particular, the Commission will look favorably upon efforts to implement the Access Board's guidelines such as formalizing self-assessment, external outreach, internal management, and user information and support to address accessibility issues. Second, the Commission has attempted to unravel the statutory terminology to give guidance on the interpretation of key language within the telecommunications context. For example, "readily achievable" is explored in great depth to explicate feasibility, expense, and practicality elements. Third, the Commission has intended to fashion efficient, consumer-friendly means of dealing with problems. By instituting a pre-complaint process in a fast-track, problem-solving phase, the Commission is attempting to implement the objectives of the statute in a cooperative, as opposed to adversarial, manner. The Commission welcomes comments on the extent to which the tentative approach it has adopted in the NPRM is likely to further the goals of section 255 without creating an unfair economic impact on small entities.

148. The Commission believes it has reduced burdens wherever possible. For burdens imposed by achieving accessibility, the structure of the statute inherently acknowledges varying degrees of economic impact. The "readily achievable" standard is proportional, not absolute, thereby adjusting the burden of providing accessible features to be commensurate with the resources of the covered entity.

149. For burdens associated with enforcement, the innovation of the "fast-track" problem solving phase is an outgrowth of the desire to find immediate, practical solutions to consumers' problems in obtaining accessible or compatible equipment and services. It is anticipated that the pre-complaint process will significantly reduce the number of complaints, thus minimizing the burden on all covered entities of providing a legal defense. Furthermore, the range of choices for resolving complaints is designed to reduce costs to the opposing parties. Encouraging the use of streamlined informal complaints or alternative dispute resolution processes is primarily to benefit individual plaintiffs who may be persons with disabilities with limited financial resources, but should similarly enable covered entities to defend at lesser cost.

150. To minimize any negative impact, however, the Commission seeks comment on the nature of incentives for small entities, which will redound to their benefit. The Commission will continue to examine alternatives in the future with the objectives of eliminating unnecessary regulations and minimizing significant economic impact on small entities. The Commission seeks comment on significant alternatives interested parties believe it should adopt.

(6) Federal Rules Which Overlap, Duplicate, or Conflict With These Rules

151. Section 255(e) directs the Access Board to develop equipment accessibility guidelines "in conjunction with" the Commission, and to periodically review and update the guidelines. The Commission views these guidelines as a starting point for the implementation of section 255, but because they do not cover telecommunications services, the Commission must necessarily adapt these guidelines in its comprehensive implementation scheme. As such, it is the Commission's tentative view that the proposed rules do not overlap, duplicate, or conflict with the Access Board Final Rule, 36 CFR Part 1193.

VI. Ordering Clauses

152. Accordingly, it is ordered, pursuant to sections 1, 4(i), 8(d), 8(g), 201, 202, 207, 208, 251(a)(2), 255, 303(r), 307, 312, 403 and 503(b) of the Communications Act, 47 U.S.C. 151, 154(i), 158(d), 158(g), 201, 202, 207, 208, 251(a)(2), 255, 303(r), 307, 312, 403, 503(b), that notice is hereby given of the proposed regulatory changes described in the NPRM, and that comment is sought on these proposals.

153. It is further ordered that the Commission's Office of Public Affairs, Reference Operations Division, shall send a copy of this NPRM, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

REMINDERS

The items in this list were editorially compiled as an aid to Federal Register users. Inclusion or exclusion from this list has no legal significance.

RULES GOING INTO EFFECT MAY 22, 1998

AGRICULTURE DEPARTMENT
Agricultural Marketing Service
Cherries (tart) grown in—
Michigan et al.; published 4-22-98
DEFENSE DEPARTMENT
Acquisition regulations:
Domestic source restrictions waiver; published 5-22-98
ENVIRONMENTAL PROTECTION AGENCY
Air quality implementation plans; approval and promulgation; various States:
Illinois; published 3-23-98
Ohio; published 3-23-98
Pesticides; tolerances in food, animal feeds, and raw agricultural commodities:
Bacillus thuringiensis subspecies tolworthi Cry9C protein and genetic material necessary for production in corn; published 5-22-98
Hydroxyethylidine diphosphonic acid; published 5-22-98
INTERIOR DEPARTMENT
Fish and Wildlife Service
Endangered and threatened species:
Pallid manzanita; published 4-22-98
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
Acquisition regulations:
Technical performance incentive guidance; published 5-22-98
TRANSPORTATION DEPARTMENT
Coast Guard
Ports and waterways:
Hudson River, NY; safety zone; published 5-21-98
TRANSPORTATION DEPARTMENT
Federal Aviation Administration
Airworthiness directives:
Avions Pierre Robin; published 4-24-98
McDonnell Douglas; published 4-17-98
TRANSPORTATION DEPARTMENT
Federal Highway Administration
Motor carrier safety standards:
Technical corrections; published 5-22-98

COMMENTS DUE NEXT WEEK

AGRICULTURE DEPARTMENT
Agricultural Marketing Service
Cherries (tart) grown in—
Michigan et al.; comments due by 5-26-98; published 4-23-98
AGRICULTURE DEPARTMENT
Animal and Plant Health Inspection Service
Interstate transportation of animals and animal products (quarantine):
Brucellosis in cattle and bison—
State and area classifications; comments due by 5-26-98; published 3-25-98
AGRICULTURE DEPARTMENT
Grain Inspection, Packers and Stockyards Administration
Fees:
Official inspection and weighing services; comments due by 5-26-98; published 3-27-98
Official/unofficial weighing services; comments due by 5-29-98; published 3-30-98
ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD
Americans with Disabilities Act; implementation:
Accessibility guidelines for transportation vehicles—
Over-the-road buses; comments due by 5-26-98; published 3-25-98
DEFENSE DEPARTMENT

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/fedreg.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 63 FR 12345.

Printed on recycled paper containing 100% post consumer waste

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

Rules and Regulations

Federal Register
Vol. 63, No. 100
Tuesday, May 26, 1998

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Parts 925 and 944

[Docket No. FV98–925–3 IFR]

Grapes Grown in a Designated Area of Southeastern California and Imported Table Grapes; Revision in Minimum Grade, Container, and Pack Requirements

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Interim final rule with request for comments.

SUMMARY: This rule revises minimum grade requirements for grapes grown in southeastern California and for grapes imported into the United States. It also revises container and pack requirements currently prescribed for California grapes. This rule allows California grape handlers to market consumer packages of grapes more economically by increasing the range of allowable bunch sizes for a portion of the 1998 season. Master containers of consumer grape packages could be marketed if the grape clusters/bunches in the packages consist of at least 2 berry clusters and the clusters/bunches are not greater than 19 ounces in weight. The increased bunch size range also applies to imported grapes. This action is in the interest of handlers, producers, importers, and consumers.

DATES: Effective June 1, 1998; comments must be received by June 25, 1998 and will be considered prior to issuance of a final rule.

ADDRESSES: Interested persons are invited to submit written comments concerning this rule. Comments must be sent to the Docket Clerk, Fruit and Vegetable Programs, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; Fax: (202) 205–6632. All comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be available for public inspection in the Office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Rose M. Aguayo, Marketing Specialist, California Marketing Field Office, Marketing Order Administration Branch, F&V, AMS, USDA, 2202 Monterey Street, suite 102B, Fresno, California 93721; telephone: (209) 487–5901, Fax: (209) 487–5906; or Anne M. Dec, Team Leader, Marketing Order Administration Branch, F&V, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632. Small businesses may request information on compliance with this regulation by contacting Jay Guerber, Marketing Order Administration Branch, F&V, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Order No. 925 (7 CFR Part 925), regulating the handling of grapes grown in a designated area of southeastern California, hereinafter referred to as the "order." The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the "Act."

This rule is also issued under section 8e of the Act, which provides that whenever certain specified commodities, including table grapes, are regulated under a Federal marketing order, imports of these commodities into the United States are prohibited unless they meet the same or comparable grade, size, quality, or maturity requirements as those in effect for the domestically produced commodities.

The Department of Agriculture (Department) is issuing this rule in conformance with Executive Order 12866.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect. This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review the Secretary's ruling on the petition, provided an action is filed not later than 20 days after date of the entry of the ruling.

There are no administrative procedures which must be exhausted prior to any judicial challenge to the provisions of import regulations issued under section 8e of the Act.

This rule increases the range of allowable sizes of grape bunches that California handlers can pack in certain containers during the period June 1, 1998, through August 15, 1998. Master containers of consumer grape packages can be marketed if the grape clusters/bunches in the packages consist of at least 2 berry clusters and the clusters/bunches are not greater than 19 ounces in weight. The increased bunch size range also applies to imported grapes, but no container specifications apply. The changes in domestic requirements were recommended by the California Desert Grape Administrative Committee (Committee), the agency responsible for local administration of the order.

Under the terms of the order, fresh market shipments of grapes grown in southeastern California are required to be inspected and meet grade, size, maturity, pack, and container requirements. Current requirements include minimum grade and net weight requirements. Grapes must also be packed in authorized containers, and such containers must be marked with the minimum net weight of the grapes contained therein, the variety of the grapes, the name of the shipper, and the lot stamp number corresponding to the lot inspection conducted by an authorized inspector.

Section 925.52(a)(2) of the grape order provides authority to limit the handling

of any grade, size, quality, maturity, or pack of grapes for different varieties, or any combination of the foregoing during any period or periods.

Section 925.304(a) of the order's administrative rules and regulations requires grapes to meet the minimum grade requirements of U.S. No. 1 Table, or U.S. No. 1 Institutional, or to meet all the requirements of U.S. No. 1 Institutional, except that a tolerance of 33 percent is provided for off-size bunches. Grapes meeting U.S. No. 1 Institutional requirements are required to be marked "U.S. No. 1 Institutional." Grapes meeting the modified U.S. No. 1 Institutional requirements may be marked "DGAC No. 1 Institutional." The requirements for the U.S. No. 1 Table and U.S. No. 1 Institutional grades are set forth in the United States Standards for Grades of Table Grapes (European or Vinifera Type) (7 CFR 51.880 through 51.914) (Standards).

Section 925.52(a)(4) of the order provides authority to regulate the size, capacity, weight, dimensions, markings, materials, and pack of containers which may be used in the handling of grapes.

Section 925.304(b)(1) of the order's administrative rules and regulations requires grapes to be packed in new and clean boxes which meet the requirements of sections 1380.14, 1380.19, 1436.37, and 1436.38 of Title 3: California Code of Regulations (CCR). That section also authorizes nine containers that can be used for domestic and export shipments and specifies dimensions for each such container. An additional container, defined in terms of a net weight of 5 kilograms, is authorized for export shipments only. All 10 of the authorized containers may be used for export shipments. Only the first nine can be used for domestic shipments.

Finally, § 925.304(b)(1) authorizes the Committee to approve other containers for experimental or research purposes.

Section 925.304(b)(2) of the order's administrative rules and regulations provides that grapes in any containers weigh at least 20 pounds based on the average net weight of grapes in a representative sample of containers. An exception is provided for grapes packed in experimental containers, or packed in bags or wrapped in plastic or paper. Containers of grapes packed in bags or wrapped in plastic or paper prior to being placed in these containers must meet a minimum net weight requirement of 18 pounds. There are no weight requirements specified for experimental containers.

The Committee met on March 24, 1998, and unanimously recommended modifying § 925.304 of the order's administrative rules and regulations to make the following changes:

(1) Revise the minimum grade requirement for the period June 1, 1998, through August 15, 1998, to allow a pilot test for the marketing of grapes which meet all the requirements of U.S. No. 1 Institutional except for the weight of clusters/bunches. The revision allows clusters/bunches as small as a 2 berry cluster and as large as 19 ounces in weight. Grapes meeting these quality requirements are to be marked "DGAC Consumer No. 1 Institutional" but cannot be marked "Institutional Pack."

(2) Authorize an experimental master container, containing individual consumer packages of grapes which weigh 1½ pounds or less, net weight, for use during the pilot test period of June 1, 1998, to August 15, 1998. Grapes meeting the "DGAC Consumer No. 1 Institutional" requirements must be packed in this container and this master container can only be used for packing the "DGAC Consumer No. 1 Institutional" grade.

(3) Update or remove certain obsolete references appearing in the regulation.

Revision in Minimum Grade Requirements

Until 1993, the minimum grade requirement under the order was U.S. No. 1 Table. One requirement of that grade is that grape bunches weigh at least 4 ounces.

In 1991, a new U.S. No. 1 Institutional grade was added to the Standards. This grade—used primarily for sales to restaurants and other food service firms—provides for grape lots which have very small bunches. At the request of the table grape industry, this grade was added to meet market demand for individual consumer sized servings of grapes. The Standards were further revised in 1996 to lower the minimum bunch size to a two berry cluster and specify a separate 4 percent tolerance for off-size bunches.

The minimum grade requirements under the order were changed in 1993 to allow California grape handlers to pack the newly established U.S. No. 1 Institutional grade. Because handlers experienced difficulties in packing this grade, these requirements were further revised in 1994 to provide a tolerance of 33 percent for off-size bunches. This modified U.S. No. 1 Institutional grade is referred to as DGAC No. 1 Institutional.

Currently, during the period April 20 through August 15 each year, California grape handlers can ship grapes meeting at least U.S. No. 1 Table, U.S. No. 1 Institutional, or DGAC No. 1 Institutional.

The requirements of the U.S. No. 1 Institutional are essentially the same as those of the U.S. No. 1 Table grade, with three major exceptions. The first difference relates to bunch size. Under the U.S. No. 1 Table grade, there is a minimum bunch size requirement of 4 ounces and no maximum bunch size. Under the U.S. No. 1 Institutional grade, grapes are to consist of at least a two berry cluster ranging to clusters and/or bunches of grapes not greater than five ounces in weight. A cluster is two or more berries sharing a common point of attachment.

The second difference is that at least 95 percent of the containers in a lot of grapes grading U.S. No. 1 Institutional must be legibly marked "Institutional Pack." There are no marking requirements under the U.S. No. 1 Table grade.

The third difference relates to the tolerances for off-size bunches. For grapes grading U.S. No. 1 Table, an 8 percent tolerance is established for all grade requirements, including off-size bunches. The U.S. No. 1 Institutional grade has a separate tolerance of 4 percent for off-size clusters/bunches and an 8 percent tolerance for the remaining grade requirements.

Requirements for the DGAC No. 1 Institutional are the same as for the U.S. No. 1 Institutional, except that the tolerance for off-size bunches is 33 percent. Because grapes meeting these requirements do not meet the U.S. No. 1 Institutional grade requirements, they cannot be marked "Institutional Pack." They may, however, be marked "DGAC No. 1 Institutional."

Recently, there has been interest in packing grapes in individual consumer packages known as "punits" or "clamshells." These containers, used most commonly to pack strawberries, are made of a clear, hard rigid plastic and typically hold a half pound or a pound of fruit. Some retailers prefer these containers because they are of the same net weight, and can be scanned at check-out. This is particularly convenient for retailers that do not have facilities for weighing produce, such as convenience stores and fast food outlets. Some consumers also prefer the convenience of prepackaged individual portions of fruit.

To meet changing market requirements, California grape handlers would like to be able to pack these consumer packages. Current bunch size requirements make it difficult however. Grape bunches normally range in weight from ¼ pound to 3 pounds. Thus, portions of bunches have to be used to fill the new packages to the weights desired by buyers. Handlers have

determined that increasing the range of permissible bunch sizes to allow for clusters/bunches of two berries to 19 ounces will provide handlers the flexibility needed to pack grapes in the desired consumer containers.

This rule revises § 925.304(a) of the order's rules and regulations to allow handlers to ship a new grade of grapes to be known as DGAC Consumer No. 1 Institutional. The name recognizes that such grapes will be packed in consumer packages and that the grapes are not packed to the minimum requirements of the U.S. No. 1 Table grade. Grapes meeting this requirement must meet the requirements of the U.S. No. 1 Institutional grade, except for the cluster/bunch size requirements. Specifically, these modified requirements allow shipments with clusters/bunches ranging from 2 berry clusters to clusters/bunches of grapes up to 19 ounces in weight.

Container Requirements

The Committee recommended that grapes packed in accordance with the new DGAC Consumer No. 1 Institutional requirements be packed in a certain way. These grapes must be packed in individual consumer packages. The consumer packages must then be packed in a master container.

Typically, the individual consumer packages hold either ½ or 1 pound of fruit. To allow for normal shrinkage during handling, handlers generally pack a slightly greater weight than is desired at retail. Section 925.304(b) is revised to provide that DGAC Consumer No. 1 Institutional grade grapes be packed in master containers containing individual consumer packages weighing 1½ pounds or less.

Additionally, these master containers are required to be marked "DGAC Consumer No. 1 Institutional" to accurately reflect their contents. The individual consumer packages do not need to be so marked. Other container marking requirements appearing in the regulation apply to the master containers as well.

The master containers used for these grapes will typically hold 10 consumer packages weighing 1 pound each or 20 packages weighing ½ pound each. Thus, these containers are exempt from the net weight requirements of 18 or 20 pounds specified in § 925.304(b)(2).

Application to Imports

Section 8e of the Act specifies that whenever certain commodities, like grapes, are regulated under a Federal order, imports of those commodities must meet the same or comparable grade, size, quality, and maturity requirements as those in effect for the domestically produced commodity. Pack and container requirements are not authorized by section 8e. Thus, the revised grade requirements implemented by this rule apply to imported grapes; none of the container or container marking requirements apply, however. If desired, importers may label containers of grapes meeting the modified U.S. No. 1 Institutional requirements as "DGAC Consumer No. 1 Institutional." Specifically, this rule modifies language in § 944.503(a)(1) of the Table Grape Import Regulation 4 for fresh grapes imported into the United States.

Clarification/Removal of Obsolete Language

This rule removes language in the introductory text of § 925.304 by removing a proviso that applies to the 1987 season and is no longer necessary.

This rule makes several other corrections in both the order's administrative rules and regulations and the import regulation. Specifically, the tolerance percentage of "8 percent" is changed to "4 percent" in §§ 925.304(a) of the order's administrative rules and regulations and in 944.503(a)(1) of the import regulation. This corrects those sections to accurately specify the current tolerance for off-size bunches in the U.S. No. 1 Institutional grade. This rule corrects a reference to the Standards from section number "51.913" to section number "51.914" in §§ 925.304(a) of the order and in 944.503(a)(1) of the import regulation; and changes a California Department of Food and Agriculture reference from "California Administrative Code (Title 3)" to "Title 3: California Code of Regulations" in paragraph (a)(1)(ii) of § 944.503 of the import regulation.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

Import regulations issued under the Act are based on those established under Federal marketing orders.

There are approximately 27 handlers of California grapes who are subject to regulation under the order and approximately 80 grape producers in the production area. In addition, there are approximately 127 importers of grapes. Small agricultural service firms have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts of less than $5,000,000, and small agricultural producers have been defined as those having annual receipts of less than $500,000. Ten of the 27 handlers subject to regulation have annual grape sales of at least $5,000,000, excluding receipts from any other sources. In addition, 70 of the 80 producers subject to regulation have annual sales of at least $500,000, and the remaining 10 producers have annual sales less than $500,000, excluding receipts from any other sources. Therefore, a majority of handlers and a minority of producers are classified as small entities. The average importer receives $2.8 million in grape revenue, excluding receipts from other sources. Therefore, we believe that the majority of these importers are small entities.

This rule increases the range of allowable sizes of grape bunches that California handlers can pack in certain containers during the period June 1, 1998, through August 15, 1998. Master containers of consumer grape packages can be marketed if the grape clusters/bunches in the packages consist of at least 2 berry clusters and the clusters/bunches are not greater than 19 ounces in weight. The increased bunch size range also applies to imported grapes, but no container specifications apply. The changes in domestic requirements were recommended by the California Desert Grape Administrative Committee (Committee), the agency responsible for local administration of the order.

Under the terms of the order, fresh market shipments of grapes grown in southeastern California are required to be inspected and meet grade, size, maturity, pack, and container requirements. Current requirements include minimum grade and net weight requirements. Grapes must also be packed in authorized containers, and such containers must be marked with the minimum net weight of the grapes contained therein, the variety of the grapes, the name of the shipper, and the lot stamp number corresponding to the lot inspection conducted by an authorized inspector.

Section 925.52(a)(2) of the grape order provides authority to limit the handling

of any grade, size, quality, maturity, or pack of grapes for different varieties, or any combination of the foregoing during any period or periods.

Section 925.304(a) of the order's administrative rules and regulations requires grapes to meet the minimum grade requirements of U.S. No. 1 Table, or U. S. No. 1 Institutional, or to meet all the requirements of U.S. No. 1 Institutional, except that a tolerance of 33 percent is provided for off-size bunches. Grapes meeting U.S. No. 1 Institutional requirements are required to be marked "U.S. No. 1 Institutional." Grapes meeting the modified U.S. No. 1 Institutional requirements may be marked "DGAC No. 1 Institutional." The requirements for the U.S. No. 1 Table and U.S. No. 1 Institutional grades are set forth in the United States Standards for Grades of Table Grapes (European or Vinifera Type) (7 CFR 51.880 through 51.914) (Standards).

Section 925.52(a)(4) of the order provides authority to regulate the size, capacity, weight, dimensions, markings, materials, and pack of containers which may be used in the handling of grapes.

Section 925.304(b)(1) of the order's administrative rules and regulations requires grapes to be packed in new and clean boxes which meet the requirements of sections 1380.14, 1380.19, 1436.37, and 1436.38 of Title 3: California Code of Regulations (CCR). That section also authorizes nine containers that can be used for domestic and export shipments, and specifies dimensions for each such container. An additional container, defined in terms of a net weight of 5 kilograms, is authorized for export shipments only. All 10 authorized containers may be used for export shipments. Only the first nine can be used for domestic shipments.

Finally, § 925.304(b)(1) authorizes the Committee to approve other containers for experimental or research purposes.

Section 925.304(b)(2) of the order's administrative rules and regulations provides that grapes in any containers weigh at least 20 pounds based on the average net weight of grapes in a representative sample of containers. An exception is provided for grapes packed in experimental containers, or packed in bags or wrapped in plastic or paper. Containers of grapes packed in bags or wrapped in plastic or paper prior to being placed in these containers must meet a minimum net weight requirement of 18 pounds.

There are no weight requirements specified for experimental containers.

The Committee met on March 24, 1998, and unanimously recommended modifying § 925.304 of the order's administrative rules and regulations to make the following changes:

(1) Revise the minimum grade requirement for the period June 1, 1998, through August 15, 1998, to allow a pilot test for the marketing of grapes which meet all the requirements of U.S. No. 1 Institutional except for the weight of clusters/bunches. The revision allows clusters/bunches as small as a 2 berry cluster and as large as 19 ounces in weight. Grapes meeting these quality requirements are to be marked "DGAC Consumer No. 1 Institutional" but cannot be marked "Institutional Pack."

(2) Authorize an experimental master container, containing individual consumer packages of grapes which weigh 1½ pounds or less, net weight, for use during the pilot test period of June 1, 1998, to August 15, 1998. Grapes meeting the "DGAC Consumer No. 1 Institutional" requirements must be packed in this container and this master container can only be used for packing the "DGAC Consumer No. 1 Institutional" grade.

Currently, during the period April 20 through August 15 each year, California grape handlers can ship grapes meeting at least U.S. No. 1 Table, U.S. No. 1 Institutional, or DGAC No. 1 Institutional.

The requirements of the U.S. No. 1 Institutional are essentially the same as those of the U.S. No. 1 Table grade, with three major exceptions. The first difference relates to bunch size. Under the U.S. No. 1 Table grade, there is a minimum bunch size requirement of 4 ounces and no maximum bunch size. Under the U.S. No. 1 Institutional grade, grapes are to consist of at least a two berry cluster ranging to clusters and/or bunches of grapes not greater than five ounces in weight. A cluster is two or more berries sharing a common point of attachment.

The second difference is that at least 95 percent of the containers in a lot of grapes grading U.S. No. 1 Institutional must be legibly marked "Institutional Pack." There are no marking requirements under the U.S. No. 1 Table grade.

The third difference relates to the tolerances for off-size bunches. For grapes grading U.S. No. 1 Table, an 8 percent tolerance is established for all grade requirements, including off-size bunches. The U.S. No. 1 Institutional grade has a separate tolerance of 4 percent for off-size clusters/bunches and an 8 percent tolerance for the remaining grade requirements.

Requirements for the DGAC No. 1 Institutional are the same as for the U.S. No. 1 Institutional, except that the tolerance for off-size bunches is 33 percent. Because grapes meeting these requirements do not meet the U.S. No. 1 Institutional grade requirements, they cannot be marked "Institutional Pack." They may, however, be marked "DGAC No. 1 Institutional."

Recently, there has been interest in packing grapes in individual consumer packages known as "punits" or "clamshells." These containers, used most commonly to pack strawberries, are made of a clear, hard rigid plastic and typically hold a half pound or a pound of fruit. Some retailers prefer these containers because they are of the same net weight, and can be scanned at check-out. This is particularly convenient for retailers that do not have facilities for weighing produce, such as convenience stores and fast food outlets. Some consumers also prefer the convenience of prepackaged individual portions of fruit.

To meet changing market requirements, California grape handlers would like to be able to pack these consumer packages. Current bunch size requirements make it difficult however. Grape bunches normally range in weight from 1/4 pound to 3 pounds. Thus, portions of bunches have to be used to fill the new packages to the weights desired by buyers. Handlers have determined that increasing the range of permissible bunch sizes to allow for clusters/bunches of two berries to 19 ounces will provide handlers the flexibility needed to pack grapes in the desired consumer containers.

This rule revises § 925.304(a) of the order's rules and regulations to allow handlers to ship a new grade of grapes to be known as DGAC Consumer No. 1 Institutional. The name recognizes that such grapes will be packed in consumer packages and that the grapes are not packed to the minimum requirements of the U.S. No. 1 Table grade. Grapes meeting this requirement must meet the requirements of the U.S. No. 1 Institutional grade, except for the cluster/bunch size requirements. Specifically, these modified requirements allow shipments with clusters/bunches ranging from 2 berry clusters to clusters/bunches of grapes up to 19 ounces in weight.

The Committee recommended that grapes packed in accordance with the new DGAC Consumer No. 1 Institutional requirements be packed in a certain way. These grapes must be packed in individual consumer packages. The consumer packages must then be packed in a master container.

Typically, the individual consumer packages hold either ½ or 1 pound of fruit. To allow for normal shrinkage during handling, handlers generally

pack a slightly greater weight than is desired at retail. Section 925.304(b) is revised to provide that DGAC Consumer No. 1 Institutional grade grapes be packed in master containers containing individual consumer packages weighing 1½ pounds or less.

Additionally, these master containers are required to be marked "DGAC Consumer No. 1 Institutional" to accurately reflect their contents. The individual consumer packages do not need to be so marked. Other container marking requirements appearing in the regulation apply to the master containers as well.

The master containers used for these grapes will typically hold 10 consumer packages weighing 1 pound each or 20 packages weighing ½ pound each. Thus, these containers are exempt from the net weight requirements of 18 or 20 pounds specified in § 925.304(b)(2).

Section 8e of the Act specifies that whenever certain commodities, like grapes, are regulated under a Federal order, imports of those commodities must meet the same or comparable grade, size, quality, and maturity requirements as those in effect for the domestically produced commodity. Pack and container requirements are not authorized by section 8e. Thus, the revised grade requirements implemented by this rule apply to imported grapes; none of the container or container marking requirements apply, however. If desired, importers may label containers of grapes meeting the modified U.S. No. 1 Institutional requirements as "DGAC Consumer No. 1 Institutional." Specifically, this rule modifies language in § 944.503(a)(1) of the Table Grape Import Regulation 4 for fresh grapes imported into the United States.

This regulation provides handlers and importers more marketing flexibility, is estimated to result in increased shipments of consumer-sized grape packs, and is expected to have positive impact on California grape handlers and importers of grapes. The changes address the marketing and shipping needs of the grape industry, and are in the interest of handlers, producers, importers, and consumers.

During the last several seasons, Mexico has been the largest exporter of grapes to the United States during the June 1 through August 15 period. Chile and Italy have exported small quantities of grapes to the U.S. during this same period. Chile is the dominant exporting country from December through May each year.

During the pilot test period of June 1, 1998, through August 15, 1998, imports are estimated to total 5.5 million lugs from Mexico, 33 thousand lugs from Chile, and approximately 4 thousand lugs from Italy. These estimates are based upon lug weights of 18 pounds.

According to Department inspection officials, minimal quantities of grapes meeting the institutional grades have been imported since the "Institutional Pack" was implemented. Based on historical data, it is estimated that approximately .5 percent to 1 percent of the imported lugs will meet the requirements of either the "U.S. No. 1 Institutional" or the "DGAC No. 1 Institutional" grades. It is further estimated that less than 1 percent of the imported lugs will meet the requirements of the "DGAC Consumer No. 1 Institutional" grade. The majority of imported grapes meet the higher grade requirements of U.S. No. 1 Table, U.S. Fancy Table, or U.S. Extra Fancy Table.

The Committee estimates the 1998 domestic crop will be approximately 8 million lugs. Domestic handlers in southeastern California, regulated under the order, are expected to ship approximately 6.2 million lugs during the test period. It is estimated that approximately .5 percent (31,000 lugs) to 1 percent (62,000 lugs) of the crop will be packed as U.S. No. 1 Institutional or DGAC No. 1 Institutional and that less than 1 percent (62,000 lugs) of the crop will be packed as "DGAC Consumer No. 1 Institutional" during the test period. The estimates for the DGAC Consumer No. 1 Institutional are based upon a lug weight of 10 pounds. The Committee estimated that handlers will receive approximately $0.60 to $1.00 per pound for a total estimated value of $372,000 to $620,000 for this new individual consumer pack. Handlers will receive approximately $0.10 more for the new consumer packages than for bagged grapes. Consumers will benefit by being able to purchase grapes in preferred containers.

The Committee requested that this rule be effective by June 1, 1998. The California grape shipping season is expected to begin shortly, and continue until August 15, 1998. Therefore, an effective date of June 1 will allow handlers and importers approximately 10 weeks to test the market.

At the meeting, the Committee discussed the potential impact of this rule and determined that this action will not require any changes in grape handling practices. Those who choose to pack to this new grade could achieve additional sales which will be a benefit to the grape industry as a whole.

The benefits of this rule are not expected to be disproportionately greater or smaller for small handlers or producers than for larger entities.

The Committee discussed alternatives to this revision, including not having a pilot test, but determined that handlers, producers, importers and consumers should benefit from this pilot test.

The Committee also discussed adding a percentage tolerance for off-size bunches of 33 percent similar to the additional percentage tolerance allowed for the DGAC No. 1 Institutional grade, but determined that the 4 percent tolerance, as contained in the Standards, was adequate to facilitate packaging of the "punits" or "clamshells".

This action will not impose any additional reporting or recordkeeping requirements on either small or large grape handlers or importers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. In addition, the Department has not identified any relevant Federal rules that duplicate, overlap or conflict with this rule.

Further, the Committee's meeting was widely publicized throughout the grape industry and all interested persons were invited to attend the meeting and participate in Committee deliberations on all issues. Like all Committee meetings, the March 24, 1998, meeting was a public meeting and all entities, both large and small, were able to express their views on this issue. The Committee itself is composed of 12 members: 8 are handlers and producers, 1 is a producer only, and 2 are handlers only. The twelfth Committee member is the public member. In addition, the embassies of Mexico, Chile, and Italy were notified of the anticipated action. Finally, interested persons are invited to submit information on the regulatory and informational impacts of this action on small businesses.

After consideration of all relevant material presented, including the Committee's recommendation, and other available information, it is found that this interim final rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is also found and determined, upon good cause, that it is impracticable, unnecessary and contrary to the public interest to give preliminary notice prior to putting this rule into effect, and that good cause exists for not postponing the effective date of this rule until 30 days after publication in the **Federal Register** because: (1) This action revises minimum grade requirements currently in effect for grapes grown in designated

areas of southeastern California and for grapes imported into the United States and offers handlers and importers more marketing flexibility; (2) California grape handlers are aware of this action which was unanimously recommended by the Committee at a public meeting. In addition, the embassies of Mexico, Chile, and Italy were notified of the anticipated action; (3) no changes in packing procedures are required by this rule for either California handlers or importers, and they will need no additional time to comply with the revised requirements; (4) California grape shipments are expected to begin soon, and this rule needs to be in effect by June 1, 1998, so handlers can test market acceptance for the remainder of the season; and (5) this rule provides a 30-day comment period and any comments received will be considered prior to finalization of this rule. For the same reasons, a 30-day comment period is deemed appropriate to provide for comments from interested persons. Further, the end of the 1998 season is August 15.

In accordance with section 8e of the Act, the United States Trade Representative has concurred with the issuance of this rule.

List of Subjects

7 CFR Part 925

Grapes, Marketing agreements, Reporting and recordkeeping requirements.

7 CFR Part 944

Avocados, Food grades and standards, Grapefruit, Grapes, Imports, Kiwifruit, Limes, Olives, Oranges.

For the reasons set forth in the preamble, 7 CFR parts 925 and 944 are amended as follows:

1. The authority citation for 7 CFR parts 925 and 944 continues to read as follows:

Authority: 7 U.S.C. 601–674.

PART 925—GRAPES GROWN IN A DESIGNATED AREA OF SOUTHEASTERN CALIFORNIA

2. Section 925.304 is amended by revising the introductory text, paragraph (a) introductory text, paragraph (b)(1)(iii) and the first sentence of paragraph (b)(2) to read as follows:

§ 925.304 California Desert Grape Regulation 6.

During the period April 20 through August 15 each year, no person shall pack or repack any variety of grapes except Emperor, Almeria, Calmeria, and Ribier varieties, on any Saturday, Sunday, Memorial Day, or the observed Independence Day holiday, unless approved in accordance with paragraph (e) of this section, nor handle any variety of grapes except Emperor, Calmeria, Almeria, and Ribier varieties, unless such grapes meet the requirements specified in this section.

(a) Grade, size, and maturity. Except as provided in paragraphs (a)(1) and (a)(2) of this section, such grapes shall meet the minimum grade and size requirements of U.S. No. 1 Table, as set forth in the United States Standards for Grades of Table Grapes (European or Vinifera Type 7 CFR 51.880 through 51.914), or shall meet all the requirements of U.S. No. 1 Institutional with the exception of the tolerance percentage for bunch size. Such tolerance shall be 33 percent instead of 4 percent as is required to meet U.S. No. 1 Institutional grade. Grapes meeting these quality requirements may be marked "DGAC No. 1 Institutional" but shall not be marked "Institutional Pack." In addition, during the period June 1, 1998, through August 15, 1998, grapes may be handled that meet all the requirements of U.S. No. 1 Institutional, except that clusters/bunches must consist of at least a 2 berry cluster ranging to clusters and/or bunches of grapes not greater than 19 ounces in weight. Such grapes must be marked "DGAC Consumer No. 1 Institutional" and meet the container requirements in paragraph (b)(1)(iii) of this section.

* * * * *

(b) * * *

(1) * * *

(iii) Such other types and sizes of containers as may be approved by the Committee for experimental or research purposes: *Provided,* That for the period June 1, 1998, through August 15, 1998, master containers may be used if they are packed with individual consumer packs of grapes that weigh 1½ pounds or less, net weight, and meet the requirements of the "DGAC Consumer No. 1 Institutional." *Provided further,* That grapes meeting the requirements of "DGAC Consumer No. 1 Institutional" shall be packed only in this container, and this master container shall be marked "DGAC Consumer No. 1 Institutional."

(2) The minimum net weight of grapes in any such containers, except for containers containing grapes packed in sawdust, cork, excelsior or similar packing material, or packed in bags or wrapped in plastic or paper, and containers authorized in paragraph (b)(1)(iii) of this section, shall be 20 pounds based on the average net weight of grapes in a representative sample of containers. * * *

* * * * *

PART 944—FRUITS; IMPORT REQUIREMENTS

3. In § 944.503, paragraphs (a)(1) introductory text and (a)(1)(ii) are revised to read as follows:

§ 944.503 Table Grape Import Regulation 4.

(a)(1) Pursuant to section 8e of the Act and Part 944—Fruits, Import Regulations, the importation into the United States of any variety of Vinifera species table grapes, except Emperor, Calmeria, Almeria, and Ribier varieties, is prohibited unless such grapes meet the minimum grade and size requirements specified in 7 CFR 51.884 for U.S. No. 1 Table, as set forth in the United States Standards for Grades of Table Grapes (European or Vinifera Type, 7 CFR 51.880 through 51.914), or shall meet all the requirements of U.S. No. 1 Institutional with the exception of the tolerance for bunch size. Such tolerance shall be 33 percent instead of 4 percent as is required to meet U.S. No. 1 Institutional grade. Grapes meeting these quality requirements shall not be marked "Institutional Pack", but may be marked "DGAC No. 1 Institutional." In addition, during the period June 1, 1998, through August 15, 1998, grapes may be imported if they meet all the requirements of U.S. No. 1 Institutional, except that clusters/bunches must consist of at least a 2 berry cluster ranging to clusters and/or bunches of grapes not greater than 19 ounces (0.532 kilograms) in weight. Such grapes may be marked "DGAC Consumer No. 1 Institutional" but shall not be marked "Institutional Pack."

* * * * *

(ii) Grapes of the Flame Seedless variety shall meet the minimum berry size requirement of ten-sixteenths of an inch (1.5875 centimeters) and shall be considered mature if the juice contains not less than 15 percent soluble solids and the soluble solids are equal to or in excess of 20 parts to every part acid contained in the juice in accordance with applicable sampling and testing procedures specified in sections 1463.3, 1436.5, 1436.6, 1436.7, 1436.12, and 1436.17 of Article 25 of Title 3: California Code of Regulations (CCR).

* * * * *

Dated: May 19, 1998.

Robert C. Keeny,

Deputy Administrator, Fruit and Vegetable Programs.

BILLING CODE 3410–02–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 98–NM–24–AD; Amendment 39–10533; AD 98–11–06]

RIN 2120–AA64

Airworthiness Directives; Aerospatiale Model ATR42–300 and –320, and Model ATR72 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Aerospatiale Model ATR42–300 and –320, and Model ATR72 series airplanes, that requires modification of the engine fuel drainage system. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to prevent fuel from overflowing into the engine nacelle, which could result in a fire in the nacelle.

DATES: Effective June 30, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the **Federal Register** as of June 30, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from Aerospatiale, 316 Route de Bayonne, 31060 Toulouse, Cedex 03, France. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Aerospatiale Model ATR42–300 and –320, and Model ATR72 series airplanes was published in the **Federal Register** on March 20, 1998 (63 FR 13574). That action proposed to require modification of the engine fuel drainage system.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were submitted in response to the proposal or the FAA's determination of the cost to the public.

Conclusion

The FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

The FAA estimates that 145 airplanes of U.S. registry will be affected by this AD.

For Model ATR42–300 and –320 series airplanes (106 airplanes), it will take approximately 8 work hours per airplane to accomplish the required modification, at an average labor rate of $60 per work hour. Required parts will be provided by the manufacturer at no cost to the operators. Based on these figures, the cost impact of this modification required by this AD on U.S. operators is estimated to be $50,880, or $480 per airplane.

For Model ATR72 series airplanes (39 airplanes), it will take approximately 15 work hours per airplane to accomplish the required modification, at an average labor rate of $60 per work hour. Required parts will cost approximately $1,499 per airplane. Based on these figures, the cost impact of this modification required by this AD on U.S. operators is estimated to be $93,561, or $2,399 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–11–06 Aerospatiale: Amendment 39–10533. Docket 98–NM–24–AD.

Applicability: Model ATR42–300 and –320 series airplanes, on which Aerospatiale Modification 1696 (reference Avions de Transport Regional Service Bulletin ATR42–71–0010) has not been accomplished; and Model ATR72–101, –201, –102, –202, –211, and –212 series airplanes, on which Aerospatiale Modification 3742 (reference Avions de Transport Regional Service Bulletin ATR72–71–1006) has not been accomplished; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent fuel from overflowing into the engine nacelle, which could result in a fire in the nacelle, accomplish the following:

(a) Within 24 months after the effective date of this AD, modify the engine fuel drainage system, in accordance with Avions

de Transport Regional Service Bulletin ATR42–71–0010, Revision 4, dated October 23, 1996 (for Model ATR42 series airplanes), or Avions de Transport Regional Service Bulletin ATR72–71–1006, Revision 1, dated October 21, 1996 (for Model ATR72 series airplanes), as applicable.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The modifications shall be done in accordance with the following Avions de Transport Regional service bulletins, which contain the following list of effective pages:

Service bulletin referenced and date	Page number shown on page	Revision level shown on page	Date shown on page
ATR72–71–1006, Revision 1, October 21, 1996	1, 2	1	October 21, 1996.
	3–15	Original	September 29, 1995.
ATR42–71–0010, Revision 4, October 23, 1996	1, 2, 4, 7	4	October 23, 1996.
	3, 15	1	September 4, 1990.
	5, 8–10, 14	Original	July 3, 1989.
	6, 11–13	2	January 30, 1991.

This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Aerospatiale, 316 Route de Bayonne, 31060 Toulouse, Cedex 03, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in French airworthiness directives 96–109–063 (B) and 96–110–030 (B), both dated June 5, 1996.

(e) This amendment becomes effective on June 30, 1998.

Issued in Renton, Washington, on May 13, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. 97–NM–331–AD; Amendment 39–10538; AD 98–11–11]

RIN 2120–AA64

Airworthiness Directives; Construcciones Aeronauticas, S.A. (CASA) Model CN–235 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to all CASA Model CN–235 series airplanes, that requires modification of the passenger and crew doors and repetitive visual inspections, adjustments, and tests of the passenger and crew door latching and locking systems to ensure correct operation. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to prevent inadvertent opening of a door during flight of the airplane, which could result in rapid decompression of the passenger cabin.

DATES: Effective June 30, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of June 30, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from Construcciones Aeronauticas, S.A., Getafe, Madrid, Spain. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to all CASA Model CN–235 series airplanes was published in the **Federal Register** on March 27, 1998 (63 FR 14861). That action proposed to require modification of the passenger and crew doors and repetitive visual inspections, adjustments, and tests of the passenger and crew door latching and locking systems to ensure correct operation.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were submitted in response to the proposal or the FAA's determination of the cost to the public.

Explanation of Editorial Changes

In the proposed AD, the FAA inadvertently omitted a reference to Annex I, Revision 2, and Annex II, Revision 2, of CASA Communication COM 235–098, Revision 02, dated October 19, 1995. Therefore, the FAA has revised paragraph (a)(2) of the final rule accordingly.

Additionally, the FAA has revised paragraph (a)(2)(ii) of this final rule to include a reference to the CASA COM mentioned previously, which was inadvertently omitted from the proposed AD.

Conclusion

The FAA has determined that air safety and the public interest require the adoption of the rule with the changes previously described. The FAA has

determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

The FAA estimates that 2 airplanes of U.S. registry will be affected by this AD.

It will take approximately 4 work hours per airplane to accomplish the required inspection, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the inspection required by this AD on U.S. operators is estimated to be $480, or $240 per airplane, per inspection cycle.

It will take approximately 60 work hours per airplane to accomplish the required modification, at an average labor rate of $60 per work hour. Required parts will cost approximately $406 per airplane. Based on these figures, the cost impact of the modification required by this AD on U.S. operators is estimated to be $8,012, or $4,006 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–11–11 Construcciones Aeronauticas, S.A. (CASA): Amendment 39–10538. Docket 97–NM–331–AD.

Applicability: All Model CN–235 series airplanes, including serial number (S/N) C–011, certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent inadvertent opening of a door during flight, which could result in rapid decompression of the passenger cabin, accomplish the following:

(a) Within 3 months or 300 flight hours after the effective date of this AD, whichever occurs later, accomplish the requirements of paragraphs (a)(1) and (a)(2) of this AD.

(1) Modify the passenger and crew doors in accordance with CASA Service Bulletin SB–235–52–54, Revision 1, dated October 24, 1995; and

(2) Perform follow-on actions (i.e., inspections for discrepancies, adjustments, and tests) in accordance with CASA COM 235–098, Revision 02, dated October 19, 1995, including Annex I, Revision 2, and Annex II, Revision 2. If any discrepancy is found, prior to further flight, accomplish the applicable corrective action in accordance with the COM. Thereafter accomplish the requirements of paragraphs (a)(2)(i) and (a)(2)(ii) of this AD.

(i) Repeat the visual inspection for discrepancies of the passenger door and crew door latching and locking systems, in accordance with paragraph 1. of CASA COM 235–098, Revision 02, dated October 19, 1995, at intervals not to exceed 300 flight hours. If any discrepancy is found, prior to further flight, accomplish the applicable corrective action in accordance with the COM.

(ii) Repeat adjustments and tests of the door latching and locking systems, in accordance with paragraphs 2. and 3. of CASA COM 235–093, Revision 02, dated October 19, 1995; and paragraph V of Annex II of CASA COM 235–098, Revision 02, dated October 19, 1995; at intervals not to exceed 1,200 flight hours. If any discrepancy is found during any adjustment or test, prior to further flight, accomplish the applicable corrective action in accordance with the COM.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The actions shall be done in accordance with CASA Service Bulletin SB–235–52–54, Revision 1, dated October 24, 1995, and CASA Communication COM 235–098, Revision 02, dated October 19, 1995, including Annex I, Revision 2, and Annex II, Revision 2. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Construcciones Aeronauticas, S.A., Getafe, Madrid, Spain. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in Spanish airworthiness directive 3/95, Revision 1, dated October 1, 1995.

(e) This amendment becomes effective on June 30, 1998.

Issued in Renton, Washington, on May 14, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Airworthiness Directives; de Havilland Model DHC–8–301, –311, –314, and –315 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain de Havilland Model DHC–8–301, –311, –314, and –315 series airplanes, that requires installation of additional wiring and new electrical connectors for the lights in the forward end of the passenger overhead compartments. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to prevent severe overheating of the electrical connectors for the lights in the forward end of the passenger overhead compartments, which could result in smoke and fire in the passenger cabin.

DATES: Effective June 30, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of June 30, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from Bombardier Inc., Bombardier Regional Aircraft Division, Garratt Boulevard, Downsview, Ontario M3K 1Y5, Canada. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Engine and Propeller Directorate, New York Aircraft Certification Office, 10 Fifth Street, Third Floor, Valley Stream, New York; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Wing Chan, Aerospace Engineer, Systems and Flight Test Branch, ANE–172, FAA, Engine and Propeller Directorate, New York Aircraft Certification Office, 10 Fifth Street, Third Floor, Valley Stream, New York 11581; telephone (516) 256–7511; fax (516) 568–2716.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain de Havilland Model DHC–8–301, –311, –314, and –315 series airplanes was published in the **Federal Register** on March 23, 1998 (63 FR 13800). That action proposed to require installation of additional wiring and new electrical connectors for the lights in the forward end of the passenger overhead compartments.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were submitted in response to the proposal or the FAA's determination of the cost to the public.

Conclusion

The FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

The FAA estimates that 10 airplanes of U.S. registry will be affected by this AD, that it will take approximately 14 work hours per airplane to accomplish the required installation, and that the average labor rate is $60 per work hour. Required parts will cost approximately $122 per airplane. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be $9,620, or $962 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–11–12 De Havilland, Inc.: Amendment 39–10539. Docket 97–NM–330–AD.

Applicability: Model DHC–8–301, –311, –314, and –315 series airplanes; serial numbers 100, and 202 through 433 inclusive; excluding serial numbers 271 and 408; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent severe overheating of the electrical connectors for the lights in the forward end of the passenger overhead compartments, which could result in smoke and fire in the passenger cabin, accomplish the following:

(a) Within 400 hours time-in-service after the effective date of this AD, install additional wiring and new electrical connectors for the lights in the forward end of the passenger overhead compartments in accordance with Bombardier Alert Service

Bulletin S.B. A8–33–39, Revision A,' dated October 24, 1997.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, New York Aircraft Certification Office (ACO), FAA, Engine and Propeller Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, New York ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the New York ACO.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The installation shall be done in accordance with Bombardier Alert Service Bulletin S.B. A8–33–39, Revision A,' dated October 24, 1997. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Bombardier, Inc., Bombardier Regional Aircraft Division, Garratt Boulevard, Downsview, Ontario M3K 1Y5, Canada. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Engine and Propeller Directorate, New York Aircraft Certification Office, 10 Fifth Street, Third Floor, Valley Stream, New York; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in Canadian airworthiness directive CF–97–17, dated September 26, 1997.

(e) This amendment becomes effective on June 30, 1998.

Issued in Renton, Washington, on May 14, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

POSTAL SERVICE

39 CFR Part 3

Amendments to Bylaws of the Board of Governors Concerning Establishment of Special Rate of Postage Under the Stamp Out Breast Cancer Act

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: The Board of Governors of the United States Postal Service has approved an amendment to its bylaws. The amendment reserves to the Governors responsibility to set the special rate of postage for special postage stamps pursuant to 39 U.S.C. § 414.

DATES: Effective: April 7, 1998.

FOR FURTHER INFORMATION CONTACT: Thomas Koerber, (202) 268–4800.

SUPPLEMENTARY INFORMATION: The Board of Governors of the Postal Service consists of nine Presidentially appointed Governors, and the Postmaster General and Deputy Postmaster General. 39 U.S.C. § 202. The bylaws of the Board list certain matters reserved for action by the Governors alone. 39 CFR § 3.4. At its meeting on April 6, 1998, the Board approved a conforming amendment to this bylaw.

The amendment gives effect to 39 U.S.C. § 414, as enacted by the Stamp Out Breast Cancer Act, Pub. L. No. 105–41, 111 Stat. 1119 (1997). Section 414 provides that the Postal Service make available a special postage stamp offered at a special rate of First-Class Mail postage to enable the public to make contributions to fund breast cancer research. The rate of postage for the special postage stamp is the First-Class Mail single-piece rate, currently 32 cents, plus a markup not to exceed 25 percent of that rate category. Subsection (b)(2) of section 414 vests the Governors of the Postal Service with authority to establish the special rate of postage for the special postage stamp "in accordance with such procedures as the Governors shall by regulation prescribe."

In accordance with section 414, the Board amended § 3.4 of the bylaws to insert a new paragraph (i), reserving to the Governors authority to establish the special rate of postage.

List of Subjects in 39 CFR Part 3

Administrative practice and procedure, Organization and functions (Government agencies), Postal service.

Accordingly, 39 CFR Part 3 is amended as follows:

PART 3—[AMENDED]

1. The authority citation for part 3 is amended to read as follows:

Authority: 39 U.S.C. 202, 203, 205, 401 (2), (10), 402, 414, 1003, 2802–2804, 3013; 5 U.S.C. 552b (g), (j); Inspector General Act, 5 U.S.C. app.

2. Section 3.4 is amended by republishing the introductory text and adding new paragraph (i) at the end of that section to read as follows:

§ 3.4—Matters reserved for decision by the Governors.

The following matters are reserved for decision by the Governors:

* * * * *

(i) Establishment of rates of postage for special postage stamps, 39 U.S.C. § 414.

Stanley F. Mires,

Chief Counsel, Legislative.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MM Docket No. 87–267; FCC 98–69]

Implementation of the AM Expanded Band Allotment Plan

AGENCY: Federal Communications Commission.

ACTION: Final rule; petitions for reconsideration.

SUMMARY: In *Implementation of the AM Expanded Band Allotment Plan*, FCC 98–69, the Federal Communications Commission denied two petitions for reconsideration filed by Press Broadcasting, Co. ("Press") and Kovas Communications, Inc. ("Kovas"). The Commission found that the issues raised by Press had been previously considered and rejected, and that the reconsideration filed by Kovas was without merit. The intended effect of this action is to affirm the Commission's previous order and the previously reissued Expanded Band Allotment Plan.

EFFECTIVE DATE: April 28, 1998.

FOR FURTHER INFORMATION CONTACT: Peter H. Doyle, Audio Services Division, Mass Media Bureau, (202) 418–2720.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Memorandum Opinion and Order in MM Docket No. 87–267, adopted on April 14, 1998 and released on April 28, 1998. The full text of the *Implementation of the AM Expanded Band Allotment Plan*, FCC 98–69 is available for inspection and copying during normal business hours in the FCC Public Reference Room, Room 239, 1919 M Street, NW, Washington, D.C. (See MM Docket 87–267). The complete text of this order may also be purchased from the Commission's copy contractor, International Transcription Service (ITS), 1231 20th Street, NW, Washington, D.C., (202) 857–3800 (phone), (202) 857–3805 (facsimile). Synopsis of MO&O: In *Implementation of the AM Expanded Band Allotment Plan*, FCC 97–68, 62 FR 23176, April 29, 1997 ("Order III"), the Commission rescinded the second allotment plan, modified the frequency preclusion and allotment programs, and clarified the harmonic interference standard used in the frequency preclusion program. The Commission also reaffirmed the five-year transition period for dual frequency operations. Press's request for reconsideration sought to have the five year transition period reduced to a six-month period. The Commission noted that the issues raised by Press had been previously considered and rejected, and found Press's request unwarranted. The Commission also denied Kovas's challenge to the second harmonic interference protection standard and the staff's determination that Kovas was ineligible to receive an Expanded Band Allotment. The Commission found that Kovas failed to identify factors warranting reconsideration of the second harmonic standard. It also found that Kovas's analysis of the allotment plan was incorrect and the argument regarding its ineligibility to receive an allotment was without merit.

Procedural Matters

As required by section 604 of the Regulatory Flexibility Act, 5 U.S.C. 604 ("RFA"), a Final Regulatory Flexibility Analysis ("FRFA") was incorporated into the *Implementation of the AM Expanded Band Allotment Plan*, FCC 97–68. The Petitions for Reconsideration filed in response to *Implementation of the AM Expanded Band Allotment Plan*, FCC 97–68, did not raise questions about FRFA. Based on the determination not to further amend the rules, no further Regulatory Flexibility Analysis is necessary.

DEPARTMENT OF DEFENSE

48 CFR Part 252

Solicitation Provisions and Contract Clauses

CFR Correction

In title 48 of the Code of Federal Regulations, chapter 2, parts 201 to 299, revised as of October 1, 1997, on page 440, section 252.223–7004 was inadvertently reserved, the omitted text should read as follows:

252.223–7004 Drug-Free Work Force.

As prescribed in 223.570–4, use the following clause:

Drug-Free Work Force (Sep. 1988)

(a) *Definitions.* (1) *Employee in a sensitive position*, as used in this clause, means an employee who has been granted access to classified information; or employees in other positions that the Contractor determines involve national security, health or safety, or functions other than the foregoing requiring a high degree of trust and confidence.

(2) *Illegal drugs*, as used in this clause, means controlled substances included in Schedules I and II, as defined by section 802(6) of title 21 of the United States Code, the possession of which is unlawful under chapter 13 of that title. The term "illegal drugs" does not mean the use of a controlled substance pursuant to a valid prescription or other uses authorized by law.

(b) The Contractor agrees to institute and maintain a program for achieving the objective of a drug-free work force. While this clause defines criteria for such a program, contractors are encouraged to implement alternative approaches comparable to the criteria in paragraph (c) that are designed to achieve the objectives of this clause.

(c) Contractor programs shall include the following, or appropriate alternatives:

(1) Employee assistance programs emphasizing high level direction, education, counseling, rehabilitation, and coordination with available community resources;

(2) Supervisory training to assist in identifying and addressing illegal drug use by Contractor employees;

(3) Provision for self-referrals as well as supervisory referrals to treatment with maximum respect for individual confidentiality consistent with safety and security issues;

(4) Provision for identifying illegal drug users, including testing on a controlled and carefully monitored basis. Employee drug testing programs shall be established taking account of the following:

(i) The Contractor shall establish a program that provides for testing for the use of illegal drugs by employees in sensitive positions. The extent of and criteria for such testing shall be determined by the Contractor based on considerations that include the nature of the work being performed under the contract, the employee's duties, the efficient use of Contractor resources, and the risks to health, safety, or national security that could result from the failure of an employee adequately to discharge his or her position.

(ii) In addition, the Contractor may establish a program for employee drug testing—

(A) When there is a reasonable suspicion that an employee uses illegal drugs; or

(B) When an employee has been involved in an accident or unsafe practice;

(C) As part of or as a follow-up to counseling or rehabilitation for illegal drug use;

(D) As part of a voluntary employee drug testing program.

(iii) The Contractor may establish a program to test applicants for employment for illegal drug use.

(iv) For the purpose of administering this clause, testing for illegal drugs may be limited to those substances for which testing is prescribed by section 2.1 of subpart B of the "Mandatory Guidelines for Federal Workplace Drug Testing Programs" (53 FR 11980 (April 11 1988)), issued by the Department of Health and Human Services.

(d) Contractors shall adopt appropriate personnel procedures to deal with employees who are found to be using drugs illegally.

Contractors shall not allow any employee to remain on duty or perform in a sensitive position who is found to use illegal drugs until such times as the Contractor, in accordance with procedures established by the Contractor, determines that the employee may perform in such a position.

(e) The provisions of this clause pertaining to drug testing program shall not apply to the extent they are inconsistent with state or local law, or with an existing collective bargaining agreement; provided that with respect to the latter, the Contractor agrees that those issues that are in conflict will be a subject of negotiation at the next collective bargaining session.

(End of clause)

Proposed Rules

Federal Register
Vol. 63, No. 100
Tuesday, May 26, 1998

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Farm Service Agency

7 CFR Part 735

RIN 0560–AF13

Amendment to Cotton Warehouse Regulations for the Purpose of Defining "Unnecessary Delay"

AGENCY: Farm Service Agency.

ACTION: Advance notice of proposed rulemaking.

SUMMARY: The Farm Service Agency (FSA) of the United States Department of Agriculture (USDA) gives notice that, as a result of two Federal District Court Orders and the cotton industry's continued encouragement, it is presently contemplating the issuance of a proposed rule that would address the statutory phrase "without unnecessary delay" contained in sections 17 and 21 of the United States Warehouse Act (USWA) (7 U.S.C. 259 and 262). In developing the proposed rule, FSA would consider all distinct options that would satisfy and complement the cotton industry's diverse segments in forging a national weekly minimum cotton flow standard. FSA requests comments and suggestions from the public on the issues and alternatives that would be addressed in developing such a proposal, including, but not limited to those issues specifically mentioned in this notice. Upon receipt and review of all comments timely received in response to this advance notice of proposed rulemaking, FSA will develop a proposed rule regarding the implementation and administration of a national cotton flow standard, which provides yet another opportunity for the public to comment before the USDA would implement a final cotton flow standard.

DATES: Comments should be submitted on or before July 27, 1998 to be assured of consideration.

ADDRESSES: Interested persons are invited to submit written comments on this advance notice of proposed rulemaking to: Steve Gill, Director, Warehouse and Inventory Division, U.S. Department of Agriculture, Farm Service Agency, Stop 0553, 1400 Independence Avenue, SW, Washington, DC 20250–0553; telephone (202) 720-2121; fax (202) 690–3123; also E-mail comments may be sent to: HELEN__LINDEN@wdc.fsa.usda.gov. Additionally, comments may be sent via the Internet through the National Cotton Flow's (NCF) homepage at: http://www.fsa.usda.gov/ncf.

All written comments received in response to this advance notice will be available for public inspection in Room 5968, South Agriculture Building, U.S. Department of Agriculture, 1400 Independence Avenue, SW, Washington, DC, between 8:00 a.m. and 4:30 p.m., Monday through Friday, except holidays.

FOR FURTHER INFORMATION CONTACT: Steve Mikkelsen, Deputy Director, Warehouse and Inventory Division, U.S. Department of Agriculture, Farm Service Agency, Stop 0553, 1400 Independence Avenue, SW, Washington, DC 20250–0553; telephone (202) 720–2121, fax (202) 690–3123.

Background

Since the early 1960's, the timely delivery of stored cotton has been an issue throughout the cotton industry. While cotton shippers and cotton merchants required timely delivery to meet the demands of the marketplace, warehousemen contended that the delivery demands placed on them by shippers and merchants were unreasonable and exceeded warehouse capabilities. Over the last 30 years, the cotton industry has made two valid attempts to address the cotton flow issue, and in 1969, USDA issued a proposed rule concerning cotton flow for warehouses licensed under the USWA. Comments received in response to that proposed rule discouraged USDA from implementing a cotton flow standard through its regulatory process and, as a result, a final rule was never issued. Continued discussions throughout the various segments of the cotton industry also have failed to bring about an endorsement of a single standard that was acceptable throughout the cotton industry.

During the 1995/96 cotton season, the Coalition for Cotton Flow Standards (CCFS), an organization created by the National Cotton Council (NCC) with the approval of all segments of the cotton industry, instituted a one-year voluntary cotton flow standard. Initially, this standard appeared acceptable to all segments of the cotton industry. The voluntary standard (1) contained weekly minimum flow requirements for warehousemen; (2) levied penalties for nonperformance by either the warehouseman or shipper; and (3) incorporated an arbitration system to settle disputes that arose over cotton flow issues. Approximately 90 percent of all cotton shippers and 52 percent of all cotton warehousemen agreed to comply with this voluntary, one-year standard. However, many warehousemen agreed to abide by the standard only if at least 90 percent of all cotton shippers and warehousemen also agreed to comply.

When shipment delays began to occur during the 1995/96 crop year, rather than exercising the arbitration rights incorporated in the voluntary standard implemented by the CCFS, several cotton shippers filed complaints with FSA. These shippers requested FSA to investigate the cotton flow situation, and suspend the federal license of those warehouses that had not delivered cotton without unnecessary delay pursuant to the USWA.

FSA personnel contacted and made several on-site visits to warehouses about which FSA had received complaints. FSA reached no ultimate conclusion, but the findings suggested that the unacceptable delays experienced by the cotton shippers and merchants may have been due, in part, to the lack of a standard method for requesting services and a lack of uniform definitions for common terms used to request these services throughout the cotton industry. For example, it appears that shippers and warehousemen begin recording time from different starting points, and there may be several days difference between a shipper's "request date" and warehouseman's "confirm date." The lack of a standard method for requesting services and of uniform common terms may have led to an appearance of a longer delivery delay than actually existed.

In addition to filing complaints with FSA, several shippers also filed lawsuits in United States District Court against

two cotton warehousemen, alleging that these warehousemen were delaying cotton deliveries to increase storage earnings. In each of these cases, lack of determination by USDA in the use and meaning of the USWA statutory phrase "without unnecessary delay" was a key issue for the courts. Ultimately, the shippers elected to dismiss their suits after the warehousemen agreed to join them in requesting that the cases be remanded to USDA to determine the definition of the statutory phrase "without unnecessary delay." The Courts agreed and remanded the matter of defining "without unnecessary delay" to USDA.

In June 1997, the Cotton Warehouse Association of America (CWAA) and the American Cotton Service Warehouse Association (ACSWA) reached an unprecedented mutual agreement for a cotton flow standard that would expedite the shipment of U.S. cotton into marketing trade channels and enhance the prices received by producers while reducing the cost of handling cotton. These two associations, along with the American Cotton Shippers Association (ACSA) and textile mill segments, petitioned USDA requesting that FSA facilitate the needs of the entire cotton industry through an expeditious establishment and implementation of a uniform cotton flow standard. These associations recommended to USDA that a weekly minimum flow standard should be as follows:

Except when prevented from doing so by Act of God or force majeure, a mandatory, non-cumulative, weekly minimum standard for bales to be shipped or made ready for scheduled delivery that week would be not less than 4.5% of CCC licensed capacity of a warehouse in effect during the week of shipment.

As a result of these events, USDA has decided to define, through the rulemaking process, the statutory phrase "without unnecessary delay" and establish a weekly minimum cotton flow standard that would be national in scope.

Using the USWA as the Tool for Implementing the Cotton Flow Standard

Section 21 of the USWA (7 U.S.C. 262) mandates that federally licensed warehousemen, "in the absence of some lawful excuse, shall, without unnecessary delay, deliver the agricultural products stored therein upon a demand made by either the holder * * * or depositor. * * *" In addition, section 17 of the USWA (7 U.S.C. 259) mandates that all non-federally licensed warehousemen who issue electronic warehouse receipts, "in the absence of a lawful excuse, shall, without unnecessary delay, deliver the cotton stored in the warehouse on demand made by the person named in the record in the central filing system as holder of the receipt."

USDA believes that the standard should be based on the USWA rather than the Cotton Storage Agreement (CSA). For the 1997 crop, more than 15.5 million bales of cotton were receipted with electronic warehouse receipts under the USWA through its federally licensed warehouse system and its approved electronic receipt providers that service non-federally licensed warehousemen, shippers, merchants, receipt holders, and other segments of the cotton industry. This represented more than 80 percent of the total 1997 cotton production. In contrast, less than 20 percent of the 1997 cotton production was associated with CCC's Cotton Storage Agreement (CSA) during this period. In addition, a standard based on the CSA would apply only to CCC-owned or loan bales and not to another storage bale, warehouse, or industry segment. Given CSA's applicability to CCC-interest cotton only, USDA perceives that the USWA's influence would embody the bulk of cotton handled and merchandised.

General Provision and Options

FSA is seeking comments from the public regarding a weekly minimum cotton flow standard that would address the statutory phrase "without unnecessary delay." While the public is free to comment on all aspects of this notice, two options for administering the cotton flow standard are being presented in this notice. The two options differ in the level of USDA involvement in ensuring compliance with the standard and in regulating the cotton industry regarding the standard.

FSA is considering the following cotton flow standard that would apply to the statutory phrase "without unnecessary delay." For the purpose of this advance notice of proposed rulemaking, this standard would be applicable to both options:

Cotton Flow Standard

Except when prevented from doing so by force majeure, a mandatory, non-cumulative, weekly minimum shipping standard for bales delivered or staged for a scheduled delivery during that week shall be not less than 4.5% of the licensed or approved storage capacity of a warehouse in effect during the week of shipment, or as determined by the Secretary.

Option I. Under Option I, USDA would establish a cotton flow standard to address the statutory phrase "without unnecessary delay", but would have minimal involvement in administering and ensuring compliance with the established standard. Option I would include provisions for private non-governmental dispute resolution and would define USDA's limited regulatory role in administering the cotton flow standard.

(a) *Cotton Flow Standard.* As stated above.

(b) *Dispute Resolution.* Unresolved claims for noncompliance with the national cotton flow standard would be resolved through arbitration administered by the cotton industry.

(1) *Arbitration.*

(i) Disputes between warehousemen, merchants, receipt holders, and shippers, who are members of the same trade association with an established arbitration system, would resolve their disputes through that association.

(ii) Parties that are members of different trade associations each with established arbitration systems would mutually negotiate about which association's arbitration system would be utilized. No split arbitrations would be allowed, only one association's arbitration system could be used.

(iii) When the parties cannot mutually agree upon, which association's arbitration system to utilize in resolving the dispute, they would enter into a contract a with private arbitrator adhering to the American Arbitration Association's (AAA) Standards and Procedures.

(iv) Private arbitrators following AAA's Standards and Procedures would resolve those disputes between parties belonging to trade associations without an established arbitration system, or who are not members of any trade association, and/or with a party who is a member of a trade association with an established arbitration system when the other party does not agree to use that association's arbitration system.

(v) The noncomplying party would be responsible for all costs and expenses associated with the arbitration.

(c) *USDA's Regulatory Role.*

(1) USDA would not hear complaints or settle unresolved disputes between a shipper and a warehouseman involving a national cotton flow standard violation or associated damages.

(2) No arbitrator's rendered determination or award would affect, obligate, or restrict USDA's authority to administer and regulate the issuance of USWA licenses, USWA receipts, contractual agreements, or the electronic warehouse receipt provider system.

Option II. Under Option II, USDA would establish a cotton flow standard to address the statutory phrase "without

unnecessary delay" and would be involved in the daily administration of the cotton flow standard. Option II includes regulatory definitions and procedures for the timely delivery and acceptance of cotton that are applicable to cotton flow standard compliance determination, dispute resolution, and reporting requirements.

(a) *Definitions and Terms.* The definitions and terms stated in this section are applicable for the purposes of administering the regulation under Option II. The following definitions are proposed. The public is free to comment on these definitions, including their inclusion or exclusion in the regulation:

(1) *Confirmed Shipment Date.* A warehouseman's scheduled delivery date for a specific bale, confirmed in writing or by any other rapid written communication method physically notifying the receipt holder.

(2) *Delivery.* A warehouseman's physical act placing a scheduled bale in some type of conveyance or otherwise making the bale available according to the receipt holder's instructions.

(3) *Force majeure.* Severe weather conditions, fire, explosion, flood, earthquake, insurrection, riot, strike, labor dispute, act of civil or military authority, non-availability of transportation facilities, or any other cause beyond the control of the warehouseman or receipt holder, which renders performance impossible.

(4) *Scheduled Bales.* Specific bales that a warehouseman schedules with written confirmation for delivery on a specified date.

(5) *Shipping Order.* A warehouseman's unique document that identifies and confirms each specific bale scheduled for delivery and references a receipt holder's original delivery request.

(6) *Timely Delivery.* An act by which a warehouseman makes available to the receipt holder a scheduled bale on or before the "confirmed shipment date", or within fourteen (14) calendar days after receiving the receipt holder's written delivery request.

(7) *Timely Acceptance.* An act by which a receipt holder takes possession and removes scheduled bales from a warehouse on or before the "confirmed shipment date."

(8) *Unnecessary Delay.* A receipt holder's failure to take "timely acceptance" or a warehouseman's failure to make "timely delivery" of a scheduled bale on or before the "confirmed shipment date" in absence of force majeure. Also, a warehouseman's failure to meet or exceed the weekly minimum cotton flow standard.

(9) *Week.* Seven (7) consecutive calendar days, beginning 12:00 a.m. Saturday morning and ending 11:59 p.m. Friday night, or as determined by the Secretary.

(b) *Cotton Flow Standard.* As stated above.

(c) *Delivery of Cotton from Storage.*

(1) The Secretary expects cotton warehousemen who issue electronic warehouse receipts and/or who are USWA licensed to schedule delivery as close as possible to a receipt holder's requested delivery date for cotton stored in their warehouse.

(2) Warehouseman must schedule delivery of all bales at the request of the receipt holder.

(3) A scheduled bale not delivered during any week would be the first bale delivered the following week. When delivered, this bale would count towards the weekly minimum cotton flow standard during the week delivered.

(4) Each individual bale within a non-segregated lot, that a warehouseman receives, stores, and redelivers under a multiple bale warehouse receipt, such bales would count toward the weekly minimum cotton flow standard upon delivery.

(5) When a warehouseman receives, stores, and redelivers bales as an unbroken non-segregated lot, without receipting them under a multiple bale or as a single warehouse receipt(s), such bales would not count toward the weekly minimum cotton flow standard upon delivery.

(6) In the absence of force majeure, warehousemen that fail to "timely deliver" scheduled bales and receipt holders that fail to "timely accept" scheduled cotton will be deemed as not complying with the weekly minimum cotton flow standard.

(d) *Dispute Resolution.* Unresolved claims for noncompliance with the national cotton flow standard would be first resolved by mediation and finally by arbitration.

(1) *Mediation.* Disputes in which one or more of the affected parties belong to a trade association(s) without an established arbitration system, or who are not members of any trade association, or who are members of separate associations and cannot agree on which association's arbitration system to utilize, would be resolved through the following alternative dispute resolution process:

(i) The parties would, in good faith, attempt to resolve the dispute through a mediation process administered by an independent mediator recommended by AAA and conducted in accordance with current AAA Mediation Rules and Procedures before resorting to binding arbitration.

(ii) The parties would faithfully observe all applicable AAA rules, procedures, and abide by and execute any agreement or determination recommended by the mediator.

(iii) When good faith mediation fails to resolve the dispute, both parties would submit their dispute to binding arbitration administered by an independent arbitrator recommended by AAA.

(2) *Arbitration.*

(i) Disputes between warehousemen, merchants, receipt holders, and shippers, who are members of the same trade association with an established arbitration system, would resolve their disputes through that association.

(ii) The parties would mutually negotiate about which association's arbitration system would be utilized, when the parties are members of different trade associations with established arbitration systems. No split arbitrations would be allowed, only one association's can be used.

(iii) When parties cannot mutually agree, which association's arbitration system to utilize in resolving the dispute, they would enter into a contract with private arbitrators adhering to AAA's standards and procedures.

(iv) Private arbitrators who follow AAA's standards and procedures would resolve those disputes between parties who belong to trade associations without an established arbitration system, or who are not members of any trade association, and/or with a party who is a member of a trade association with an established arbitration system when the other party does not agree to use that association's arbitration system.

(v) In the event a party refuses to submit to arbitration or fails to abide by any determination or award rendered by the arbitrators, the party desiring arbitration or enforcement of the determination or award may notify USDA of the party's unwillingness to resolve a cotton flow standard dispute or comply with an arbitrator's rendered determination or award.

(vi) The noncomplying party would be responsible for all costs and expenses associated with the arbitration and any costs incurred by USDA.

(vii) Any controversy or claim arising from or related to the arbitrator's rendered determination or award may be enforced by any federal or state court having jurisdiction thereof.

(e) *USDA's Regulatory Role.*

(1) USDA would not hear complaints or settle unresolved disputes between a shipper and a warehouseman involving

a national cotton flow standard violation or associated damages.

(2) No arbitrator's rendered determination or award would affect, obligate, or restrict USDA's authority to administer and regulate the issuance of USWA licenses, USWA receipts, contractual agreements, or the electronic warehouse receipt provider system.

(3) Under the authority of the USWA and its regulations, USDA may independently administer all regulatory actions, arbitration proceeding determinations, and rendered awards when such action is necessary for the effective administration of the national cotton flow standard.

(4) USDA will require USWA licensed warehousemen and non-federally licensed warehousemen, receipt holders, and shippers who utilize the electronic warehouse receipt system to:

(i) Meet the weekly minimum cotton flow standard.

(ii) "Timely deliver" and "timely accept" scheduled bales.

(5) USDA would reserve the right to take action against the noncomplying party, including:

(i) Suspension or termination of licenses issued in accordance with the USWA.

(ii) Suspension or termination of access to the electronic receipt provider system.

(f) *Program Operations and Maintenance.* Congress requires USDA to collect sufficient fees for the operation and maintenance of all USWA related operations. USDA is considering funding the cost of administering a national cotton flow standard through an assessment on each bale of cotton.

(1) Warehousemen would collect an assessment on each individually receipted bale and each individual bale represented by a multiple bale receipt that is delivered or redelivered for shipment.

(2) The assessment would be collected along with other warehouseman's tariff charges in the final settlement of each shipping order.

(3) The warehouseman would forward the collected assessments to USDA quarterly.

(g) *Reports and Reporting.* Each week, warehousemen would electronically transmit a report to USDA that would be comprised of warehouse information that the cotton industry considers essential for improving global marketing opportunities, enhancing cotton values, and encouraging timely delivery and acceptance of stored cotton. USDA would collectively merge this information into a "National Cotton Flow Standard Status Report" that USDA would publish electronically on the Internet.

Comments

The information collected in response to this advance notice of proposed rulemaking will be used to determine the cotton industry's overall needs regarding a "National Cotton Flow Standard". Appendix I provides interested parties an opportunity to respond to specific questions on the issue of a national cotton flow standard. Respondents may simply cut out or duplicate the stated issues/questions furnished in Appendix I of this notice. Respondents may submit their comments to the address shown above. Respondents may also access these same issues/questions and submit comments via the Internet through the NCF homepage address at: http://www.fsa.usda.gov/ncf.

APPENDIX I

National Cotton Flow Standard

Issues/Questions

The Farm Service Agency (FSA) is requesting comments on the following issues:

1. ❑ Agree ❑ Disagree The cotton industry needs a "National Cotton Flow Standard."

2. ❑ Agree ❑ Disagree FSA is the agency to administer a "National Weekly Minimum Cotton Flow Standard" for the cotton industry. If not FSA, I recommend _____.

3. ❑ Agree ❑ Disagree The proposed cotton flow standard of 4.5% of a warehouseman's licensed or approved storage capacity is reasonable. If 4.5% is not reasonable, I recommend _____ percentage.

4. ❑ Agree ❑ Disagree USDA should define and standardize certain terms used within the cotton industry.

5. ❑ Agree ❑ Disagree "Timely delivery" is best defined as the act or process by which the warehouseman presents or makes available scheduled bales to the receipt holder or shipper on or before the "confirmed shipment date", or within the fourteen (14) calendar days following date the warehouseman receives the receipt holder or shippers

written request for delivery or shipment. If 14 days is not reasonable, I would recommend _____ days.

6. ❑ Agree ❑ Disagree An "alternative dispute resolution system" such as arbitration should be used to resolve unsettled claims regarding cotton flow and untimely delivery or acceptance.

7. ❑ Agree ❑ Disagree The resolution system should be binding with no appeal.

8. ❑ Agree ❑ Disagree The resolution system should allow discovery by opposing parties.

9. ❑ Agree ❑ Disagree The entire cost and related expenses of using the dispute resolution system should be paid by the losing party.

10. ❑ Agree ❑ Disagree Rendered determinations and awards that result from the resolution system should be made public record or published, by

_____.

11. ❑ Agree ❑ Disagree Because Congress requires USDA to collect sufficient fees to cover expenses related to USWA operations, USDA is considering requiring warehousemen to collect an assessment on each bale of cotton shipped, which would then be forwarded to USDA. If you disagree, who should fund the cost associated with the national cotton flow standard? _____

12. ❑ Agree ❑ Disagree There should be a National Cotton Flow Standard Status Report that summarizes the shipping activities of all warehousemen and shippers.

13. ❑ Agree ❑ Disagree USDA should be responsible for a National Cotton Flow Standard Status Report. If not USDA, I would recommend _____.

14. ❑ Agree ❑ Disagree A National Cotton Flow Standard Status Report should be published and made available on the Internet.

15. ❑ Agree ❑ Disagree A National Cotton Flow Standard Status Report should contain only warehouse information that the cotton industry considers essential for overall improvement of cotton values and marketing. If you agree, what information should be published and made available on the report?

BILLING CODE 3410–05–P

DEPARTMENT OF ENERGY

10 CFR Part 835

[Docket No. EH–RM–96–835]

RIN 1901–AA59

Occupational Radiation Protection

AGENCY: Department of Energy.

ACTION: Proposed rule; Notice of Paperwork Reduction Act Submission and comment request.

SUMMARY: On December 23, 1996, the Department of Energy (DOE or Department) published a notice of proposed rulemaking to amend the Department's primary standards for occupational radiation protection during the conduct of DOE activities. This notice advises the public that DOE has submitted for review a Paperwork Reduction Act Submission for the proposed rule to the Office of Management and Budget (OMB) for review and invites interested persons to submit written comments and recommendations to OMB concerning the proposed collection of information.

DATES: Written comments and recommendations for the proposed collections of information must be mailed by June 25, 1998 directly to the OMB desk officer at the address below. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, please advise the OMB Desk Officer of your intention to make a submission as soon as possible. The Desk Officer may be contacted at telephone number (202) 395–3084.

ADDRESSES: Comments should be addressed to the Department of Energy Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, N.W., Washington, D.C. 20503. (Persons submitting comments to OMB also are requested to send a copy to Dr. Joel Rabovsky, U.S. Department of Energy, EH–52, "EH-RM–96–835 Rulemaking," 1000 Independence Avenue, S.W., Washington, D.C. 20585.)

FOR FURTHER INFORMATION CONTACT: Requests for copies of the Department's Paperwork Reduction Act Submission and other information should be directed to Dr. Joel Rabovsky, U.S. Department of Energy, Office of Worker Protection Programs and Hazards Management, 1000 Independence Avenue, S.W., Washington, D.C. 20585, (301) 903–2135.

SUPPLEMENTARY INFORMATION: DOE has submitted a Paperwork Reduction Act Submission for a proposed rule on occupational radiation protection to OMB for review under section 3507(d) of the Paperwork Reduction Act of 1995. The proposed rule was published in the **Federal Register** on December 23, 1996 (61 FR 67600). This notice invites interested persons to submit written comments and recommendations to OMB concerning the proposed collections of information described below. Comments should address: (1) whether the proposed collections of information are necessary for the proper performance of the functions of DOE, including whether the information shall have practical utility; (2) the accuracy of the Department's burden estimates, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; (4) ways to minimize the burden of the collection on the respondents, including the use of automated collection techniques or other forms of information technology.

OMB Approval Number: 1910–xxxx.

Title: Occupational Radiation Protection.

Abstract: Under section 161 of the Atomic Energy Act of 1954 (42 U.S.C. 2201), DOE is authorized to adopt rules governing DOE activities undertaken in the performance of its functions. Part 835 of title 10 CFR establishes radiation protection limits and controls to protect DOE employees, contractor and subcontractor employees, and visiting workers who use DOE facilities from occupational exposure to radiation or radioactive materials. Part 835 contains the following information collection requirements, all of which would be modified by the Department's December 23, 1996, rulemaking proposal:

1. *Radiation Protection Program Submissions.* Part 835 requires contractors performing DOE activities to prepare and submit a radiation protection program (RPP) to DOE for approval, and to submit updates of the RPP to DOE for approval. 10 CFR § 835.101.

2. *Recordkeeping requirements.* Part 835 requires contractors to keep individual monitoring records (§ 835.702); certain workplace monitoring records (§ 835.703); training and other administrative records (§ 835.704); records of release of materials and equipment from radiological areas (§ 835.1101); and records of planned special exposures to radiation (§ 835.204).

3. *Reporting requirements.* Part 835 requires contractors to provide radiation dose reports to monitored individuals and to report other information to individuals upon termination of employment and on other occasions. 10 CFR § 835.801.

Need and Uses: The information that part 835 requires DOE major facilities management contractors to produce, maintain and/or report are necessary to permit the Department to manage and oversee health and safety programs that control worker (i.e., DOE employees, contractor and sub-contractor employees, and visiting workers) exposure to radiation.

Frequency: (1) The initial RPP Submission is a one-time requirement; updates are required on occasion; (2) recordkeeping requirements include planned special exposure records from time to time, as well as individual and workplace monitoring records; (3) reporting of radiation doses to monitored individuals is required annually; other information is reported to individuals upon termination of employment and on other occasions.

Number of Respondents: 50. This number reflects the number of radiation protection programs for part 835 implemented to date.

Estimated Annual Burden: 50,000 hrs. This burden estimate consists of DOE's estimates of the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose information to or for DOE. In developing these burden estimates, DOE has estimated the total cost of complying with the information collection requirements in 10 CFR 835.

Issued in Washington, DC, on May 8, 1998.

Peter N. Brush,

Acting Assistant Secretary, Environment, Safety and Health.

[FR Doc. 98–13849 Filed 5–22–98; 8:45 am]

UMI VOL 63 ISS 100 MAY 26 1998 UMI

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Parts 56, 57, 62, 70, and 71

Health Standards for Occupational Noise Exposure in Coal, Metal and Nonmetal Mines

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Proposed rule; Notice of preliminary determination of no significant environmental impact; request for comments; limited reopening of rulemaking record.

SUMMARY: This notice announces the preliminary determination by the Mine Safety and Health Administration (MSHA) that the proposed rule for occupational noise exposure in coal, metal and nonmetal mines will have no significant environmental impact. MSHA is reopening the rulemaking record for the limited purpose of receiving comment on its preliminary determination.

DATES: Submit written comments on or before June 25, 1998.

ADDRESSES: Comments may be transmitted by electronic mail, fax or mail. Comments by electronic mail must be clearly identified as such and sent to this e-mail address: comments@msha.gov. Comments by fax must be clearly identified as such and sent to: Mine Safety and Health Administration, Office of Standards, Regulations and Variances, 703–235–5551. Send mail comments to: Mine Safety and Health Administration, Office of Standards, Regulations and Variances, Room 631, 4015 Wilson Boulevard, Arlington, Virginia 22203–1984. Interested persons are encouraged to supplement written comments with computer files or disks; please contact the Agency with any questions about format.

FOR FURTHER INFORMATION CONTACT: Patricia W. Silvey, Director, Office of Standards, Regulations and Variances, 703–235–1910.

SUPPLEMENTARY INFORMATION: On December 17, 1996, MSHA published a proposed rule in the **Federal Register** (61 FR 66348) revising its health standards for occupational noise exposure in coal, metal and nonmetal mines. The Agency concluded that the existing rules are inadequate to prevent the occurrence of occupational noise-induced hearing loss among miners (NIHL).

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 et. seq.), requires each Federal agency to consider the environmental effects of proposed actions and to prepare an Environmental Impact Statement on major actions significantly affecting the quality of the human environment. MSHA has reviewed the proposed standard in accordance with the requirements of the NEPA, the regulation of the Council on Environmental Quality (40 CFR Part 1500), and the Department of Labor's NEPA procedures (29 CFR Part 11). As a result of this review, MSHA has preliminarily determined that this proposed standard will have no significant environmental impact.

Commenters are encouraged to submit their comments on this determination on or before June 25, 1998.

Dated: May 19, 1998.

J. Davitt McAteer,

Assistant Secretary for Mine Safety and Health.

[FRA Docket No. PCSS–1, Notice No. 4]

RIN 2130–AA95

Passenger Equipment Safety Standards

AGENCY: Federal Railroad Administration (FRA), DOT.

ACTION: Notice of Entries in the Docket.

SUMMARY: FRA is issuing this notice to inform all interested parties that written comments and other documents specifically addressing issues related to the Notice of Proposed Rulemaking (NPRM) on Passenger Equipment Safety Standards have recently been placed in the public docket for the rulemaking. These recent entries in the docket are available for public examination.

ADDRESSES: The public docket for the rulemaking is available for examination during regular business hours in FRA's Office of Chief Counsel, Seventh Floor, 1120 Vermont Avenue, N.W., Washington, D.C. Written comments concerning the rulemaking should identify the docket number and must be submitted in triplicate to the Docket Clerk, Office of Chief Counsel, Federal Railroad Administration, 400 Seventh Street, S.W., Mail Stop 10, Washington, D.C. 20590.

FOR FURTHER INFORMATION CONTACT: Daniel Alpert, Trial Attorney, Office of Chief Counsel, FRA, 400 Seventh Street, S.W., Mail Stop 10, Washington, D.C. 20590 (telephone: 202–632–3186); or Thomas Herrmann, Trial Attorney, Office of Chief Counsel, FRA, 400 Seventh Street, S.W., Mail Stop 10, Washington, D.C. 20590 (telephone: 202–632–3178).

SUPPLEMENTARY INFORMATION: On September 23, 1997, FRA published an NPRM on Passenger Equipment Safety Standards in the **Federal Register**. See 62 FR 49728. The proposed rule contained requirements concerning equipment design and performance criteria related to passenger and crew survivability in the event of a passenger train accident; the inspection, testing, and maintenance of passenger equipment; and the safe operation of passenger train service. The proposed rule was designed to address the safety of passenger train service in an environment where technology is advancing, and equipment is being designed for operation at higher speeds. The NPRM sought to amend existing regulations concerning special notice for repairs, safety glazing, locomotive safety, safety appliances, and railroad power brakes as applied to passenger equipment.

The NPRM stated that written comments on the rulemaking had to be received on or before November 24, 1997, and that written comments received after that date would be considered by FRA and the Passenger Equipment Safety Standards Working Group to the extent possible without incurring substantial additional expense or delay. The NPRM also stated that the docket would remain open until the proceedings of the Working Group concluded. The Working Group concluded its meetings on January 6, 1998.

Subsequent to the formal close of the comment period, various entries have been made in the docket, many of which have been available for public examination for some time. However, due to the length of time that has passed since the formal close of the comment period and the completion of the Working Group meetings, FRA would like to notify all interested parties of the following recent entries in the docket:

- Minutes of the Passenger Equipment Safety Standards Working Group meeting held on December 15–16, 1997.
- Minutes of the Passenger Equipment Safety Standards Working Group meeting held on January 6, 1998.
- A letter dated April 2, 1998 from William W. Millar, President, American

Public Transit Association, to Jolene M. Molitoris, Administrator, FRA.

• A letter dated April 17, [1998] and attached documents from G. P. Binns, General Manager, Mechanical Standards and Compliance, National Railroad Passenger Corporation, to Grady C. Cothen, Jr., Deputy Associate Administrator for Safety, Federal Railroad Administration.

• Documents dated April 24, 1998 from the National Railroad Passenger Corporation.

The items noted above—and all other information contained in the public docket for the rulemaking—are available for examination during regular business hours in FRA's Office of Chief Counsel, Seventh Floor, 1120 Vermont Avenue, N.W., Washington, D.C.

Issued in Washington, D.C., on May 19, 1998.

Grady C. Cothen, Jr.,

Deputy Associate Administrator for Safety Standards and Program Development.

BILLING CODE 6118–01–P

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Manufacturing Extension Partnership National Advisory Board

AGENCY: National Institute of Standards and Technology, Department of Commerce.

ACTION: Notice of open meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act, 5 U.S.C. app. 2, notice is hereby given that the Manufacturing Extension Partnership (MEP) National Advisory Board, National Institute of Standards and Technology (NIST), will meet to hold a meeting on Thursday, May 28, 1998. The Manufacturing Extension Partnership National Advisory Board is composed of 9 members appointed by the Director of NIST who were selected for their expertise in the area of industrial extension and their work on behalf of smaller manufacturers. The Board was set up under the direction of the Director of the National Institute of Standards and Technology to fill a need for outside input and advice for MEP, a unique program consisting of centers in all 50 states and Puerto Rico which are created by a state, federal and local partnership. The Board works closely with the Manufacturing Extension Partnership to provide input and advice on MEP's programs, plans and policies. The purpose of this meeting is to delve into areas the Board selected at the previous meeting. On May 28, 1998, the agenda for the meeting of the Board will include an MEP overview, program impacts as a result of the federal investment, the importance of center assessments on companies, and the status of system-wide programs and services.

DATES: The meeting will convene on May 28, 1998 at 8:30 p.m. and will adjourn at 4:00 p.m.

ADDRESSES: the meeting will be held in Building 101, Lecture Room A (seating capacity 50, includes 15 participants), at NIST, Gaithersburg, Maryland.

SUPPLEMENTARY INFORMATION: MEP services to smaller manufacturers address the needs of the national market as well as the unique needs of each company. Since MEP is committed to providing this type of individualized service through its centers, the program requires the perspective of locally-based experts to be incorporated into its national plans. The MEP National Advisory Board was set up at the direction of the Director of the National Institute of Standards and Technology to maintain MEP's focus on local and market based needs. The MEP National Advisory Board was approved on October 24, 1996, in accordance with the Federal Advisory Committee Act, 5 U.S.C. app. 2., to provide advice on MEP programs, plans, and policies; assess soundness of MEP plans and strategies; assess current performance against MEP program plans, and function in an advisory capacity. The Board will meet three times a year and reports to the Director of NIST. This will be the second meeting of the members in 1998.

FOR FURTHER INFORMATION CONTACT: Linda Acierto, Assistant to the Director for Policy, Manufacturing Extension Partnership, National Institute of Standards and Technology, Gaithersburg, MD 20899, telephone number (301) 975–5033.

Dated: May 20, 1998.

Robert E. Hebner,

Acting Deputy Director, NIST.

DEPARTMENT OF DEFENSE

Office of the Secretary

Establishment of the Threat Reduction Advisory Committee (TRAC)

ACTION: Notice of Establishment.

SUMMARY: That Threat Reduction Advisory is being established in consonance with the public interest and in accordance with the provisions of Pub. L. 92–463, the "Federal Advisory Committee Act," Title 5 U.S.C., Appendix 2.

This advisory committee will provide advice and recommendations to the Secretary of Defense and Deputy Secretary of Defense regarding the Defense Reform Initiative directed formation of the Defense Threat Reduction Agency (DTRA). DTRA will be a consolidation of the Defense Special Weapons Agency, the On-Site Inspection Agency, the Defense Technical Security Agency and selected elements from the Office of the Secretary of Defense. Once this agency is established, the TRAC will advise the Director, DTRA with respect to Technology Security, Counterproliferation, Chemical and Biological Defense, Sustainment of the Nuclear Weapons Stockpile and other matters related to the new agency's mission.

The TRAC will consist of a balanced membership of approximately eighteen noted technical and defense security experts from outside the federal government with varied experience and diverse interests, appointment by the Secretary of Defense.

BILLING CODE 5000–04–M

DEPARTMENT OF DEFENSE

Department of the Army

Record of Decision on the Final Environmental Impact Statement (FEIS) on the Disposal and Reuse of the Seneca Army Depot Activity, New York

AGENCY: Department of the Army, DoD.

ACTION: Notice of availability.

SUMMARY: The Department of the Army announces its Record of Decision (ROD) on the Final Environmental Impact Statement (FEIS) for the disposal and reuse of the 10,594 acres comprising the Seneca Army Depot Activity (SEDA), in accordance with the Defense Base Closure and Realignment Act of 1990, Public Law 101–510, as amended. The establishment of an enclave as directed by the BRAC Commission would require the Army's retention of 30 acres to be used for storage of hazardous materials and ores.

In the ROD, the Army concludes that the FEIS adequately addresses the impacts of property disposal and documents its decision to transfer the property as encumbered. The ROD concludes that the surplus property will be conveyed subject to restrictions, identified in the FEIS, that relate to the following: historical resources, remedial activities, access easement, wetlands, groundwater use, lead-based paint, asbestos-containing material, easements and rights-of-way, and unexploded ordnance. The Army will impose deed restrictions or other requirements to ensure safety and protection of human health and the environment. The Army has taken all practicable measures to avoid or minimize environmental harm associated with its preferred alternative of encumbered property disposal. The Army will continue to work with individual future owners to avoid, reduce, or compensate for adverse impacts that might occur as a result of disposal. Mitigation measures for reuse activities are identified in the FEIS.

ADDRESSES: A copy of the ROD may be obtained by writing to Ms. Shirley Barnett, U.S. Army Materiel Command, ATTN: AMCSO, 5001 Eisenhower Avenue, Alexandria, VA 22333–0001 or by calling (703) 617–8172. Copies of the Final EIS may be obtained by writing to Mr. Hugh McClellan, Corps of Engineers, Mobile District, ATTN: SAMPD, PO Box 2288, Mobile, Alabama 36628–0001 or by facsimile at (334) 690–2605.

SUPPLEMENTARY INFORMATION: Under the Act, the Secretary of the Army has been delegated the authority to dispose of excess real property and facilities located at a military installation being closed or realigned. The Army is required to comply with the National Environmental Policy Act during the process of property disposal and must prepare appropriate analyses of the impacts of disposal and, indirectly, of reuse of the property on the environment. The ROD and the FEIS satisfy requirements of the law to examine the environmental impacts of disposal and reuse of the Seneca Army Depot Activity.

Dated: May 19, 1998.

Richard E. Newsome,

Acting Deputy Assistant Secretary of the Army (Environment, Safety and Occupational Health) OASA (I, L&E).

ANR Pipeline Company; Notice of Proposed Changes in FERC Gas Tariff

May 19, 1998.

Take notice that on May 14, 1998, ANR Pipeline Company (ANR) tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, the following revised tariff sheets, to be effective May 1, 1998:

Fourth Revised Sheet No. 1
Second Revised Sheet No. 9A
Ninth Revised Sheet No. 19
First Revised Sheet No. 45F

ANR states that this filing is made in compliance with the Commission's Order dated April 29, 1998 in the captioned proceeding.

ANR states that copies of the filing have been mailed to all affected customers and state regulatory commissions.

Any person desiring to protest this filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Section 385.211 of the Commission's Rules and Regulations. All such protests must be filed as provided in Section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

Colorado Interstate Gas Company; Notice of Proposed Changes in FERC Gas Tariff

May 19, 1998.

Take notice that on May 15, 1998, Colorado Interstate Gas Company (CIG), tendered for filing to become part of its FERC Gas Tariff, First Revised Volume No. 1, the tariff sheets listed in Appendix A to the filing, to be effective June 15, 1998.

CIG states that the purpose of this filing is to implement Rate Schedule PAL–1 to create a new, flexible parking and lending service for shippers. Accordingly, this filing includes revised Tariff sheets for the proposed new service.

CIG states that copies of the filing have been mailed to all affected customers and state regulatory commissions.

Any person desiring to be heard or to protest this filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, N.W., Washington, D.C. 20426, in accordance with Sections 385.214 and 385.211 of the Commission's Rules and Regulations, All such motions or protests must be filed as provided in Section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP98–534–000]

Colorado Interstate Gas Company; Notice of Application

May 19, 1998.

Take notice that on May 11, 1998, Colorado Interstate Gas Company (CIG), P.O. Box 1087, Colorado Springs, Colorado 80944, filed in Docket No. CP98–534–000 an abbreviated application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain one-inch diameter wellhead fuel lines located in it's Panhandle Field in Potter and Moore Counties, Texas, all as more fully set forth in the application on file with the Commission and open to public inspection.

CIG states that the purpose of the fuel gas lines is to provide processed fuel gas to seven wellhead compressors and would provide a more efficient operation of these compressors and decrease maintenance requirements. CIG estimates the cost of these facilities to be approximately $75,000.

Any person desiring to be heard or to make any protest with reference to said application should on or before June 9, 1998, file with the Federal Energy Regulatory Commission, Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that permission and approval for the proposed abandonment are required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for CIG to appear or be represented at the hearing.

[Docket No. CP98–558–000]

Koch Gateway Pipeline Company; Notice of Application for Abandonment

May 19, 1998.

Take notice that on May 15, 1998, Koch Gateway Pipeline Company (Koch Gateway), P.O. Box 1478, Houston, Texas 77251–1478, filed in Docket No.

CP98–558–000, an application pursuant to Section 7(b) of the Natural Gas Act (NGA) and Section 157.18 of the Commission's Regulations requesting permission and approval to abandon obsolete transportation services formerly provided to Mid Louisiana Gas Company (Mid Louisiana), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Specifically, Koch Gateway (formerly known as United Gas Pipe Line Company) requests authorization to abandon several obsolete transportation agreements under Rate Schedules X–093, X–123, X–126, X–130, X–133, X–134 and X–144 which were certificated in Docket Nos. CP77–589, CP–79–429, CP80–018, CP80–077, CP80–402, CP79–429 and CP81–278, respectively. Koch Gateway states that the individually certificated services are no longer required by Mid Louisiana and have been terminated. Koch Gateway also states that Mid Louisiana concurs with the proposed abandonment and that no facilities are proposed to be abandoned.

Any person desiring to be heard or to make any protest with reference to said application should on or before June 9, 1998, file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the NGA and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Koch Gateway to appear or be represented at the hearing.

[Docket No. CP98–551–000]

Koch Gateway Pipeline Company; Notice of Application for Abandonment

May 19, 1998.

Take notice that on May 14, 1998, Koch Gateway Pipeline Company (Koch Gateway), P.O. Box 1478, Houston, Texas 77251–1478, filed in Docket No. CP98–551–000, an application pursuant to Section 7(b) of the Natural Gas Act (NGA) and Section 157.18 of the Commission's Regulations requesting permission and approval to abandon obsolete transportation service formerly provided to ANR Pipeline Company (ANR), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Specifically, Koch Gateway (formerly known as United Gas Pipe Line Company) requests authorization to abandon the obsolete transportation agreement under Rate Schedule X–106, dated December 20, 1977 which was certificated in Docket No. CP78–205. Koch Gateway states that this individually certificated service is no longer required by ANR and has been terminated. Koch Gateway also states that ANR concurs with the proposed abandonment and that no facilities are proposed to be abandoned.

Any person desiring to be heard or to make any protest with reference to said application should on or before June 9, 1998, file with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the NGA and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Koch Gateway to appear or be represented at the hearing.

Federal Energy Regulatory Commission

[Docket No. CP98–549–000]

Koch Gateway Pipeline Company; Notice of Application to Abandon

May 19, 1998.

Take notice that on May 14, 1998, Koch Gateway Pipeline Company (Koch), P.O. Box 1478, Houston, Texas 77251–1478, filed under Section 7(b) of the Natural Gas Act, for authority to abandon, a certificated interruptible transportation service for Sugar Bowl Gas Corporation (SBGC). The service is Koch's Rate Schedule X–37 in its FERC Gas Tariff, Original Volume No. 2. Koch states that the SBGC sold its assets in 1983 and no longer needs the service. Koch's proposal is more fully set forth in the application which is on file with the Commission and open to public inspection.

Any person desiring to be heard or make any protest with reference to said application should on or before June 9, 1998, file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the regulations under the Natural

Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required, or if the Commission on its own review of the matter finds that permission and approval of the proposed abandonment are required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Koch to appear or be represented at the hearing.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RP98–216–000]

Northwest Pipeline Corporation; Notice of Petition for Declaratory Order

May 19, 1998.

Take notice that on May 8, 1998, pursuant to Rule 207(a)(2) of the Commission's Rules of Practice and Procedure (18 CFR 207(a)(2)), Northwest Pipeline Corporation (Northwest) tendered for filing a petition for a declaratory order.

Northwest requests the Commission to assist Northwest in determining the appropriate final confirmed volume between Northwest and PG&E Gas Transmission-Northwest (GT–NW) at the points of their interconnection. Northwest argues that because currently effective GISB standards do not specifically address pipeline to pipeline communication and confirmation standards, Northwest seeks the Commission's assistance in resolving the dispute between Northwest and GT–NW.

Northwest respectfully requests the Commission to provide guidance concerning how final confirmed volumes should be determined. Northwest submits that for the locked-in period from August 1997 until the implementation of Order No. 587–G, GT–NW should be directed to recognize Northwest's "Evening Confirmation" as the start of gas day confirmation. Implementation of Order No. 587–G, supported by Northwest regarding this issue, will eliminate future confirmation disputes between Northwest and GT–NW.

Northwest argues that because of the significance of this issue, and the fact that timing issues affect pipelines throughout the country, Northwest submits that it is appropriate for the Commission to determine how this issue should be resolved in light of GISB standards, rather than leaving the parties to construe individual operating and balancing agreement terms.

Northwest states that copies of the filing has been served upon all jurisdictional customers and affected state commissioners.

Any person desiring to be heard or to protest this filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Sections 385.214 and 385.211 of the Commission's Rules and Regulations. All such motions or protests must be filed on or before June 8, 1998. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

[Project No. 77–110]

Pacific Gas and Electric Company; Notice of Extension of Comment Due Date

May 19, 1998.

On April 13, 1998, the Federal Energy Regulatory Commission (Commission) issued notice of an application for amendment of the license for the Potter Valley Project (FERC No. 77–110) and of our intent to prepare an Environmental Impact Statement (EIS) (Published 4/17/98, 63 FR 19247), in support of the Commission's decision in this matter. The proposed amendment involves changes in the minimum flow requirements at the project, located on the Eel and East Fork Russian Rivers, in Lake and Mendocino Counties, California.

The notice established June 8, 1998 as the deadline for submitting any comments, protests, or motions to intervene in the proceeding.

Take notice that the deadline for submitting any comments, protests, or motions to intervene in the proceeding is hereby extended to June 15, 1998.

David P. Boergers,

Acting Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP98–536–000]

Texas Eastern Transmission Corporation; Notice of Request Under Blanket Authorization

May 19, 1998.

Take notice that on May 12, 1998, Texas Eastern Transmission Corporation (Applicant), 5400 Westheimer Court, Houston, Texas, 77056–5310, filed in Docket No. CP98–536–000 a request pursuant to Sections 157.205 and 157.211 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 157.211) for approval to construct a delivery point in Dunklin County, Missouri, so that Applicant may provide natural gas deliveries to Associated Electric Cooperative, Inc. (AECI), for its St. Francis Power Plant, pursuant to Section 7(c) of the Natural Gas Act (NCA), all as more fully set forth in the request which is on file with the

Commission and open to public inspection.

Applicant proposes to construct and install two eight-inch tap vales, an eight-inch check valve and related piping on Applicant's existing twenty-four-inch Line No. One in Dunklin County, Missouri. Applicant also proposes to install, or cause to be installed, dual eight-inch meter runs, a single two-inch meter run and associated piping and valves, 350 feet of ten-inch connecting pipe, and electronic gas measurement equipment, (EGM). Applicant asserts that it will be reimbursed 100 per cent by AECI for the costs and expenses that Applicant will incur for the design, material procurement and installation of the tap, meter station, connecting pipe and EGM, including an allowance for federal income taxes.

Applicant states that the transportation service will be rendered pursuant to Applicant's Rate Schedule IT–1. Applicant asserts that its tariff does not prohibit the addition of this facility. Applicant submits that the installation of the delivery point will have no impact on Applicant's peak day or annual deliveries. Applicant further asserts that this proposal will be accomplished without detriment or disadvantage to Applicant's other customers.

Any person or the Commission's Staff may, within 45 days of the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.214), a motion to intervene and pursuant to Section 157.205 of the regulations under the Natural Gas Act (18 CFR 157.205), a protest to the request. If no protest is filed within the time allowed therefor, the proposed activities shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the Natural Gas Act.

David P. Boergers,

Acting Secretary.

Williams Gas Pipelines Central, Inc.; Notice of Proposed Changes in FERC Gas Tariff

May 19, 1998.

Take notice that on May 14, 1998, Williams Gas Pipelines Central, Inc. (Williams), tendered for filing to become part of its FERC Gas Tariff, Original Volume No. 1, the following tariff sheet, with the proposed effective date of May 1,1998:

First Revised First Revised Sheet No. 268

Williams states that this filing is being made in compliance with Commission staff's May 5, 1998 letter to correct the tariff sheet pagination.

Williams states that a copy of its filing was served on all participants listed on the service lists maintained by the Commission in the dockets referenced above and on all of Williams' jurisdictional customers and interested state commissions.

Any persons desiring to protest this filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Section 385.211 of the Commission's Rules and Regulations. All such protests must be filed as provided in Section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER98–1959–000, et al.]

Mississippi Power Company, et al.; Electric Rate and Corporate Regulation Filings

May 19, 1998.

Take notice that the following filings have been made with the Commission:

1. Mississippi Power Company

[Docket No. ER98–1959–000]

Take notice that on May 13, 1998, Mississippi Power Company and Southern Company Services, Inc., its agent, tendered for filing a Service Agreement, pursuant to the Southern Companies Electric Tariff Volume No. 4, Market Based Rate Tariff, with South Mississippi Electric Power Association for the Aleco Fire Tower Road Delivery Point to Singing River Electric Power Association. The agreement will permit Mississippi Power to provide wholesale electric service to South Mississippi Electric Power Association at a new service delivery point.

Copies of the filing were served upon South Mississippi Electric Power Association, the Mississippi Public Service Commission, and the Mississippi Public Utilities Staff.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

2. Ameren Services Company

[Docket Nos. ER96–677–005 and ER96–679–005]

Take notice that on May 14, 1998, Ameren Services Company (Ameren Services), acting on behalf of Union Electric Company and Central Illinois Public Service Company (Ameren Companies), filed a revised compliance filing in accordance with the Commission's April 14, 1998, letter order accepting Ameren Services' February 2, 1998, Open Access Tariff Compliance Filing but requiring one change to the Tariff, which Ameren Services has made in the filing.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

3. Lowell Cogeneration Company Limited Partnership

[Docket Nos. ER98–372–002 and ER98–394–002]

Take notice that on May 14, 1998, Lowell Cogeneration Company Limited Partnership (Lowell), filed a refund compliance report associated with refund obligations resulting from late filing of service agreements under Lowell's market-based power sales tariff.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

4. MidAmerican Energy Company

[Docket No. ER98–2410–000]

Take notice that on May 14, 1998, MidAmerican Energy Company (MidAmerican), 666 Grand Avenue, Des Moines, Iowa 50303 submitted for filing

with the Commission a Service Agreement dated March 30, 1998, with the City of Denver, IA (Denver), entered into pursuant to MidAmerican's Rate Schedule for Power Sales, FERC Electric Tariff, Original Volume No. 5 (Tariff), and a Power Sales Agreement dated March 30, 1998, with the City of Denver, IA, entered into pursuant to the Service Agreement and the Tariff.

MidAmerican requests an effective date of April 1, 1998, for this Agreement, and seeks a waiver of the Commission's notice requirement.

MidAmerican has served a copy of the filing on Denver, the Iowa Utilities Board, the Illinois Commerce Commission and the South Dakota Public Utilities Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

5. Sovereign Power, Inc.

[Docket No. ER98–2995–000]

Take notice that on May 14, 1998, Sovereign Power, Inc. (Sovereign), petitioned the Commission for acceptance of Sovereign Rate Schedule FERC No. 1; the granting of certain blanket approvals, including the authority to sell electricity at market-based rates; and the waiver of certain Commission Regulations.

Sovereign intends to engage in wholesale electric power and energy purchases and sales as a marketer. Sovereign is not in the business of generating or transmitting electric power.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

6. California Independent System Operator Corporation

[Docket No. ER98–2996–000]

Take notice that on May 14, 1998, the California Independent System Operator Corporation (ISO), tendered for filing a Participating Generator Agreement between AES Redondo Beach, L.L.C. (AES Redondo Beach), and the ISO for acceptance by the Commission.

The ISO states that this filing has been served on AES Redondo Beach and the California Public Utilities Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

7. California Independent System Operator Corporation

[Docket No. ER98–2997–000]

Take that notice on May 14, 1998, the California Independent System Operator Corporation (ISO), tendered for filing a Participating Generator Agreement between AES Alamitos, L.L.C., (AES Alamitos) and the ISO for acceptance by the Commission.

The ISO states that this filing has been served on AES Alamitos and the California Public Utilities Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

8. California Independent System Operator Corporation

[Docket No. ER98–2998–000

Take notice that on May 14, 1998, the California Independent System Operator Corporation (ISO), tendered for filing a Meter Service Agreement for ISO Metered Entities between the ISO and AES Alamitos, L.L.C. (AES Alamitos), for acceptance by the Commission.

The ISO states that this filing has been served on AES Alamitos, and the California Public Utilities Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

9. California Independent System Operator Corporation

[Docket No. ER98–2999–000]

Take notice that on May 14, 1998, the California Independent System Operator Corporation (ISO), tendered for filing a Meter Service Agreement for ISO Metered Entities between the ISO and AES Redondo Beach, L.L.C. (AES Redondo Beach), for acceptance by the Commission.

The ISO states that this filing has been served on AES Redondo Beach and the California Public Utilities Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

10. California Independent System Operator Corporation

[Docket No. ER98–3000–000]

Take notice that on May 14, 1998, the California Independent System Operator Corporation (ISO), tendered for filing a Participating Generator Agreement between AES Huntington Beach, L.L.C. (AES Huntington Beach) and the ISO for acceptance by the Commission.

The ISO states that this filing has been served on AES Huntington Beach and the California Public Utilities Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

11. Louisville Gas And Electric Company

[Docket No. ER98–3001–000].

Take notice that on May 14, 1998, Louisville Gas and Electric Company (LG&E), filed a Notice of Cancellation canceling Non-Firm Point-to-Point Transmission Service Agreements with Cleveland Electric Illuminating Company (CEI) and Toledo Edison Company (TE) as requested by the customer.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

12. Louisville Gas and Electric Company

[Docket No. ER98–3002–000]

Take notice that on May 14, 1998, Louisville Gas and Electric Company (LG&E), tendered for filing a Consent to Assignment Form assigning all of the rights associated with the following Transmission Service Agreements between Louisville Gas and Electric Company (LG&E) and Southern Energy Trading and Marketing, Inc., to Southern Company Energy Marketing, L.P.: (1) Non-Firm Transmission Service Agreement filed with the Commission in Docket No. ER96–2090–000, (2) Short-Term Point-to-Point Transmission Service Agreement filed with the Commission in Docket No. ER98–1496–000.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

13. California Independent System Operator Corporation

[Docket No. ER98–3003–000]

Take notice that on May 14, 1998, the California Independent System Operator Corporation (ISO), tendered for filing a Meter Service Agreement for ISO Metered Entities between the ISO and AES Huntington Beach, L.L.C. (AES Huntington Beach), for acceptance by the Commission.

The ISO states that this filing has been served on AES Huntington Beach and the California Public Utilities Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

14. Carolina Power & Light Company

[Docket No. ER98–3004–000]

Take notice that on May 14, 1998, Carolina Power & Light Company (Carolina), tendered for filing an executed Service Agreement between Carolina and Equitable Power Services Company. Service to the Eligible Entity will be in accordance with the terms and conditions of Carolina's Tariff No. 1, for Sales of Capacity and Energy.

Copies of the filing were served upon the North Carolina Utilities Commission and the South Carolina Public Service Commission.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

15. Central Vermont Public Service Corporation

[Docket No. ER98–3005–000]

Take notice that on May 14, 1998, Central Vermont Public Service Corporation (Central Vermont), tendered for filing an unexecuted umbrella service agreement with Central Vermont's Power Supply Department for the use of the Highgate Converter and the related facilities.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

16. K&K Resources, Inc.

[Docket No. ER98–3006–000]

Take notice that on May 14, 1998, K&K Resources, Inc. (K&K), petitioned the Commission for acceptance of K&K Rate Schedule FERC No. 1; the granting of certain blanket approvals, including the authority to sell electricity at market-based rates; and the waiver of certain Commission Regulations.

K&K intends to engage in wholesale electric power and energy purchases and sales as a marketer. K&K is not in the business of generating or transmitting electric power.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

17. The Dayton Power and Light Company

[Docket No. ER98–3007–000]

Take notice that on May 14, 1998, The Dayton Power and Light Company (Dayton), submitted service agreements establishing Tennessee Valley Authority as a customer under the terms of Dayton's Market-Based Sales Tariff.

Dayton requests an effective date of one day subsequent to this filing for the service agreements. Accordingly, Dayton requests waiver of the Commission's notice requirements. Copies of the this filing were served upon Tennessee Valley Authority and the Public Utilities Commission of Ohio.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

18. Central Maine Power Company

[Docket No. ER98–3010–000]

Take notice that on May 14, 1998, Central Maine Power Company (CMP), tendered for filing pursuant to Section 35.12 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 CFR 35.12, as an initial rate schedule, an interconnection agreement (the Agreement) with Stratton Energy Associates (SEA). The Agreement provides for interconnection service to SEA at the rates, terms, charges, and conditions set forth therein. CMP is requesting that the Commission provide the requested authorization by June 19, 1998.

Copies of this filing have been served upon the Maine Public Utilities Commission and Stratton Energy Associates.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

19. Kentucky Utilities Company

[Docket No. ER98–3011–000]

Take notice that on May 14, 1998, Kentucky Utilities Company (KU), tendered for filing a service agreement between KU and Allegheny Power Service Corporation for service under Kentucky Utilities Company's (KU) Power Services (PS) Tariff.

Comment date: June 3, 1998, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection.

David P. Boergers,

Acting Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Tendered for Filing With the Commission

May 19, 1998.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Application:* Major Relicense.

b. *Project No.:* P–2634–007.

c. *Date Filed:* April 28, 1998.

d. *Applicant:* Great Northern Paper, Inc.

e. *Name of Project:* Storage Project.

f. *Location:* On Ragged Stream, Caucomgomoc Stream, and West Branch and South Branch of the Penobscot River in the Counties of Somerset and Piscataquis, Maine.

g. *Filed pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Brian Stetson, Manager of Environmental Affairs, Great Northern Paper, Inc., One Katahdin Avenue, Millinocket, ME 04462–1398, (207) 723–2664.

i. *FERC Contact:* William Diehl, P.E. (202) 219–2813.

j. *Comment Date:* 60 days from the date of filing of the application.

k. *Description of Project:* The constructed project consists of four dams and reservoirs on headwaters tributaries of the Penobscot River. The four developments are named Canada Falls Lake, Seboomook Lake, Caucomgomoc Lake, and Ragged Lake. There are no power generating facilities included in the project. The total storage capacity of the four reservoirs is about 9.224 billion cubic feet or about 212,000 acre-feet.

l. With this notice we are initiating consultation with the MAINE STATE HISTORIC PRESERVATION OFFICER (SHPO), as required by § 106, National Historic Preservation Act, and the regulations of the Advisory Council on Historic Preservation, 36 CFR 800.4.

m. Pursuant to Section 4.32(b)(7) of 18 CFR of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

David P. Boergers,

Acting Secretary.

Sunshine Act Meeting; Notice

May 20, 1998.

The following notice of meeting is published pursuant to section 3(a) of the Government in the Sunshine Act (Pub. L. 94–409), 5 U.S.C. 552B:

AGENCY HOLDING MEETING: Federal Energy Regulatory Commission.

DATE AND TIME: May 27, 1998, 10:00 a.m.

PLACE: Room 2C, 888 First Street, N.E., Washington, D.C. 20426.

STATUS: Open.

MATTERS TO BE CONSIDERED: Agenda.

Note.—Items listed on the agenda may be deleted without further notice.

CONTACT PERSON FOR MORE INFORMATION: David P. Boergers, Acting Secretary, Telephone (202) 208–0400. FOR a recording listing items stricken from or added to the meeting, call (202) 208–1627.

This is a list of matters to be considered by the Commission. It does not include a listing of all papers relevant to the items on the agenda; however, all public documents may be examined in the reference and information center.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6102–4]

Agency Information Collection Activities: Submission for OMB Review; Comment Request; NESHAP for Epoxy Resins and Non-Nylon Polyamide Resin

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this document announces that the following Information Collection Request (ICR) has been forwarded to the Office of Management and Budget (OMB) for review and approval: National Emission Standards for Hazardous Air Pollutants (NESHAP) for Epoxy Resins and Non-nylon Polyamide Production, OMB Control Number 2060–0290, expiration date July 31, 1998. The ICR describes the nature of the information collection and its expected burden and cost; where appropriate, it includes the actual data collection instrument.

DATES: Comments must be submitted on or before June 25, 1998.

FOR FURTHER INFORMATION CONTACT: For a copy of the ICR, call Sandy Farmer at EPA, by phone at (202) 260–2740, by E-Mail at Farmer.Sandy@epamail.epa.gov or download off the Internet at http://www.epa.gov/icr/icr.htm, and refer to EPA ICR No. 1681.03.

SUPPLEMENTARY INFORMATION:

Title: NESHAP for Epoxy Resin and Non-nylon Polyamide Resin Production, Subpart W, OMB Control No. 2060–0290; EPA ICR No. 1681.03 expiring 07/31/98. This is a request for extension of a currently approved collection.

Abstract: The ICR contains recordkeeping and reporting requirements that are mandatory for compliance with 40 CFR part 63, subpart W, regulating hazardous air pollutants from process vents, storage vessels, wastewater systems and equipment leaks. The standards require recordkeeping and reporting to document process information related to the source's ability to comply with the standards. This information is used by the Agency to identify sources subject to the standards and to insure that the maximum achievable control technology is being properly applied. Section 112 of the Clean Air Act, as amended in 1990, requires that EPA establish standards to limit emissions of hazardous air pollutants (HAPs) from stationary sources. The sources subject to these provisions emit the HAPs epichlorohydrin, and in lesser amounts, hydrochloric acid and methanol. In the Administrator's judgment, hazardous air pollutant emissions in this industry cause or contribute to air pollution that may be reasonably expected to endanger public health or welfare. Respondents are owners or operators of new and existing facilities that manufacture polymers and resins from epichlorohydrin. Source categories include basic liquid epoxy resin (BLR) producers and producers of epichlorohydrin-modified non-nylon polyamide resins, also known as wet strength resins (WSR).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15. The **Federal Register** document required under 5 CFR 1320.8(d), soliciting comments on this collection of information was published on 12/02/97 (62 FR 63703); no comments were received.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 156 hours per respondent. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Owners or operators of new and existing facilities that manufacture polymers and resins from epichlorohydrin

Estimated Number of Respondents: 13.

Frequency of Response: Semiannually (some quarterly).

Estimated Total Annual Hour Burden: 4525 hours.

Estimated Total Annualized Cost Burden: $9,000.

Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the following addresses. Please refer to EPA ICR No. 1681.03 and OMB Control No. 2060–0290 in any correspondence.

Ms. Sandy Farmer, U.S. Environmental Protection Agency, OPPE Regulatory Information Division (2137), 401 M Street, SW, Washington, DC 20460;

and

Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for EPA, 725 17th Street, NW, Washington, DC 20503.

Dated: May 18, 1998.

Richard T. Westlund,

Acting Director, Regulatory Information Division.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[OPPTS–400130; FRL–5792–5]

Public Meetings on the Toxics Release Inventory Reporting Form

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of public meetings.

SUMMARY: EPA will hold approximately nine public meetings to solicit comments relating to the Toxics Release Inventory (TRI) reporting form, the Form R. The purpose of the meetings is to obtain comments from stakeholders on ways to improve the type of right-to-know information available to communities and to help streamline right-to-know reporting to ease the paperwork burden for businesses affected by the requirements. The first five meetings were held in November 1997 and February and April 1998. This notice announces two upcoming meetings. Additional meeting dates will be announced through future **Federal Register** notices.

DATES: The meetings will take place:

1. Thursday, June 18, 1998, 9 a.m. to 12 p.m., at the Ramada Inn, 70 John Wesley Dobbs Avenue, Atlanta, GA 30303. Participants must register to speak by 5:00 p.m. on Thursday, June 11, 1998.

2. Wednesday, June 24, 1998, 9 a.m. to 12 p.m., at the Holiday Inn City Center, 1215 Wyandotte Street, Kansas City, MO 64105. Participants must register to speak by 5:00 p.m. on Wednesday, June 17, 1998.

ADDRESSES: Each comment must bear the docket control number "OPPTS–400130." All comments should be sent in triplicate to: OPPT Document Control Officer (7407), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Rm. G–099, East Tower, Washington, DC 20460.

Comments and data may also be submitted electronically to: oppt.ncic@epamail.epa.gov. Follow the instructions under Unit II. of this document. No Confidential Business Information (CBI) should be submitted through e-mail.

All comments which contain information claimed as CBI must be clearly marked as such. Three sanitized copies of any comments containing information claimed as CBI must also be submitted and will be placed in the public record for this action. Persons submitting information on any portion of which they believe is entitled to treatment as CBI by EPA must assert a business confidentiality claim in accordance with 40 CFR 2.203(b) for each such portion. This claim must be made at the time that the information is submitted to EPA. If a submitter does not assert a confidentiality claim at the time of submission, EPA will consider this as a waiver of any confidentiality claim and the information may be made available to the public by EPA without further notice to the submitter.

FOR FURTHER INFORMATION CONTACT: Vicki R. Anderson, (Mail Stop 7408), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; telephone: (202) 260–3544; fax number: (202) 401–8142; e-mail: anderson.vicki@epamail.epa.gov.

SUPPLEMENTARY INFORMATION:

I. Background

EPA plans to hold approximately nine public meetings to solicit comments relating to the Toxics Release Inventory (TRI) reporting form, the Form R. The first five meetings took place in November 1997 and February and April 1998. The docket control number for the November meetings is "OPPTS–400117" and the docket control number for the February and April meetings is "OPPTS–400124." Comments presented at these meetings are available for review as described in Unit II. of this document.

The purpose of the meetings is to obtain comments from stakeholders on ways to improve the type of right-to-know information available to communities and to help streamline right-to-know reporting to ease the paperwork burden for businesses affected by the requirements. Topics for comment include the format of the Form R; nomenclature used in the Form R; opportunities for burden reduction in both the Form R and Form A; additional clarification of the elements in the Form R; and EPA's presentation of the data in public information documents. EPA would like to receive comments on these issues from interested parties for changes, modifications, deletions, and/or additions of data elements to the Form R and the Form A. These issues are outlined in greater detail in an issue paper available on the TRI Home Page at http://www.epa.gov/opptintr/tri under the heading "TRI Stakeholder Dialogue" and the subheading "TRI Public Meetings."

The sections of the Form R that EPA would like specific comment on are sections 5, 6, and 8. In section 5, there have been a number of issues raised with regard to the definition of "release," particularly with respect to Class I underground injection wells and Resource Conservation and Recovery Act (RCRA) subtitle C landfills. Several commenters believe that EPA's interpretation of the Emergency Planning and Community Right-To-Know Act (EPCRA) definition of "release" will lead to the misperception that a reported EPCRA section 313 "release" necessarily results in an actual exposure of people or the environment to a toxic chemical. The Agency would like to hear suggestions on ways to collect and disseminate the data that are consistent with the Agency's interpretation of the EPCRA definition of "release" and would address the concerns raised regarding public misperception.

There have also been a number of issues raised with regard to the reporting of toxic chemicals in wastes in section 8 of the Form R. Section 8 collects information on waste managed at the facility whether or not the waste was generated at the reporting facility. Some individuals are concerned about public misperception of the data in section 8 because of the focus on the amount of waste managed at the facility and not the waste generated. EPA would like comments on ways to change section 8 of the Form R, which would continue to allow the user to assess wastes managed by the facility but would minimize the perception that the wastes reported in section 8 were generated by the reporting facility.

Individuals wishing to attend these meetings or participate via conference call must sign-up in advance in order to assure that all participants have an opportunity to speak. Depending on the number of individuals registered, oral presentations or statements will be limited to approximately 5 to 15 minutes. To register, contact Vicki Anderson at (202) 260–3544. For those who cannot travel to the public meeting location, there will be 10 conference call lines available on a first come, first served basis. When registering, give your name, organization, postal (and electronic, if any) mailing address, telephone, and fax number. If there is insufficient interest in any of the meetings, that meeting may be canceled. Individuals registered will be notified in the event a meeting is canceled. The Agency bears no responsibility for attendees' decision to purchase nonrefundable transportation tickets or accommodation reservations.

II. Public Record and Electronic Submissions

The official record for this action, as well as the public version, has been established for this action under docket control number "OPPTS–400130" (including comments and data submitted electronically as described below). A public version of this record, including printed, paper versions of electronic comments, which does not include any information claimed as CBI, is available for inspection from noon to 4 p.m., Monday through Friday, excluding legal holidays. The official record is located in the TSCA Nonconfidential Information Center, Rm. NE–B607, 401 M St., SW., Washington, DC 20460.

Electronic comments can be sent directly to EPA at:
oppt.ncic@epamail.epa.gov

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Comments and data will also be accepted on disks in WordPerfect 5.1/6.1 or ASCII file format. All comments and data in electronic form must be identified by the docket control number "OPPTS–400130." Electronic comments on this action may be filed online at many Federal Depository Libraries.

FEDERAL COMMUNICATIONS COMMISSION

[CC Docket No. 96–45; DA 98–856]

Proposed Third Quarter 1998 Universal Service Contribution Factors

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: The Common Carrier Bureau announces proposed universal service contribution factors for the third quarter of 1998. If the Commission takes no action regarding these proposed factors within 14 days of publication in the **Federal Register**, the projections shall be deemed approved by the Commission and shall be used to calculate third quarter universal service contributions.

DATES: If the Commission takes no action regarding these proposed factors by June 9, 1998, the proposed third quarter contribution factors will become effective.

ADDRESSES: One original and five copies of all comments responsive to this Public Notice must be sent to Magalie Roman Salas, Secretary, Federal Communications Commission, 1919 M Street, NW, Washington, DC 20554. Three copies also should be sent to Sheryl Todd, Accounting Policy Division, Common Carrier Bureau, 2100 M Street, NW, 8th Floor, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Frances Downey, Accounting Policy Division, Common Carrier Bureau, (202) 418–7371.

SUPPLEMENTARY INFORMATION:

In this Public Notice, the Accounting Policy Division of the Common Carrier Bureau announces proposed universal service contribution factors for the third quarter of 1998. On May 1, 1998, the Universal Service Administrative Company (USAC), Schools and Libraries Corporation (SLC), and Rural Health Care Corporation (RHCC) submitted the following projections of third quarter 1998 demand and administrative expenses:

MILLIONS OF DOLLARS

Program	Program demand	Administrative expenses	Interest income	Total program costs
Schools and Libraries	690.0	4.4	(0.0)	694.4
Rural Health Care	24.3	1.2	(0.5)	25.0
Subtotal	714.3	5.6	(0.5)	719.4
High Cost	414.1	0.8	(0.7)	414.2
Low Income	125.3	0.4	(1.0)	124.7
Subtotal	539.4	1.2	(1.7)	538.9
Total	1,253.7	6.8	(2.2)	1,258.3

Based on information contained in the Universal Service Worksheets, FCC Form 457, USAC submitted on May 1, 1998, end-user telecommunications revenues for the 1997 calendar year. Funding bases for the third and fourth quarters are determined by subtracting the revenues reported for January through June 1997 (on the September Worksheet) from the 1997 calendar year revenues reported on the March Worksheet. The amounts are as follows:

Total Interstate, Intrastate, and International End-User Telecommunications Revenues from July 1, 1997—December 31, 1997: $93.534 billion.

Total Interstate and International End-User Telecommunications Revenues from July 1, 1997—December 31, 1997: $34.988 billion.

We estimate quarterly revenues by dividing the six-month revenue estimates listed above by two.

Based on the figures submitted by USAC, SLC, and RHCC, the proposed contribution factors for the third quarter of 1998 are as follows:

Contribution factor for the schools and libraries and rural health care support mechanisms:

Total Program Costs/Contribution Base (Interstate, International, and Intrastate)=$0.719 billion/($93.534 billion/2)=0.0154.

Contribution factor for the high cost and low income support mechanisms:

Total Program Costs/Contribution Base (Interstate and International)=$0.539 billion/($34.988 billion/2)=0.0308.

These factors are the proposed third quarter 1998 universal service

contribution factors. If the Commission takes no action regarding these proposed factors within the 14-day period following publication in the **Federal Register**, the projections shall be deemed approved by the Commission and shall be used by USAC to calculate third quarter universal service contributions. We note that in a Public Notice released today, the Common Carrier Bureau seeks comment on its proposal to reduce the 1998 collection amounts for the schools and libraries and rural health care universal service support mechanisms. If the Commission reduces the 1998 collection amounts for these programs, the contribution factor proposed in this Public Notice for the schools and libraries and rural health care support mechanisms will be revised accordingly. While we have not had an opportunity to review fully the statement of Commissioner Furchtgott-Roth, we do take this opportunity to note that the 60-day congressional review period referenced in that statement does not apply to "any rule promulgated under the Telecommunications Act of 1996 and the amendments made by that Act."

For further information, contact Frances Downey, Accounting Policy Division, Common Carrier Bureau, at (202) 418–7400.

Federal Communications Commission.

Lisa S. Gelb,

Chief, Accounting Policy Division.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[DA 98–786]

Waiver To Permit Sharing of Industrial/Land Transportation Channels With Public Safety Users

1. On May 6, 1997, Central and South West Services, Inc. (CSW) filed a Request for Waiver of § 90.179 of the Commission's Rules to permit it to share its 800 MHz Industrial and Land Transportation (I/LT) Category system with Public Safety and Federal Government users on a non-profit, cost shared basis. CSW is the parent company of four electric utilities serving approximately 1.7 million consumers in 800 communities located throughout Texas, Oklahoma, Arkansas and Louisiana. It is licensed for one hundred and twenty-five 800 MHz I/LT channel pairs and operates a trunked land mobile radio system providing communications capabilities over 152,000 square miles. CSW uses its system—which was designed to address peak loading, reliability and control issues attendant to the rapid-wide scale mobilization of personnel and equipment—to dispatch and coordinate inspection, maintenance and emergency response activities.

2. Private Land Mobile Radio Service frequencies in the 800 MHz band are divided into the following five categories: Specialized Mobile Radio, Public Safety, Business, I/LT, and General. CSW requests a waiver in order to share its I/LT system with Public Safety and Federal Government eligibles because section 90.179(a) of the Commission's Rules provides that a licensee may share its radio station only with users that would be eligible for separate authorization to use those frequencies. Public Safety and Federal Government entities are not eligible to be licensed on 800 MHz I/LT Category spectrum.

3. In its Request for Waiver, CSW asserts that many public safety agencies operating within the area covered by its network lack sufficient spectrum or financial resources to construct and operate high quality, comprehensive communications systems. Additionally, CSW contends that these agencies often need to communicate and coordinate with CSW in situations such as power outages. Attached to the request are letters from eight Public Safety eligibles, and from the United States Army's Fort Hood military complex in central Texas, indicating interest in sharing CSW's system. Additionally, on March 5, 1998, CSW was contacted by the Texas Coastal Corridor Initiative about use of the CSW system for drug interdiction across South Texas.

4. Interested parties may file comments on CSW's Request for Waiver on or before June 4, 1998. Parties interested in submitting reply comments must do so on or before June 15, 1998. All comments should reference CSW's Request for Waiver with the designated DA number, and should be filed with the Office of the Secretary, Federal Communications Commission, 1919 M Street, NW, Room 222, Washington, DC 20554. A copy of each filing should be sent to International Transcription Services, Inc. (ITS), 1231 20th Street, NW, Washington, DC 20036, (202) 857–3800 and Scot Stone, Federal Communications Commission, Wireless Telecommunications Bureau, Public Safety and Private Wireless Division, 2025 M Street, NW, Room 8010–G, (202) 418–0680 or via e-mail to sstone@fcc.gov.

5. The full text of the Request for Waiver, comments, and reply comments are available for inspection and duplication during regular business hours in the Public Safety and Private Wireless Division of the Wireless Telecommunications Bureau, Federal Communications Commission, 2025 M Street, NW, Room 8010, Washington, DC 20554. Copies also may be obtained from ITS, 1231 20th Street, NW, Washington, DC 20036, (202) 857–3800.

6. For further information, contact Scot Stone of the Public Safety and Private Wireless Division of the Wireless Telecommunications Bureau at (202) 418–0680 or via e-mail to sstone@fcc.gov.

Federal Communications Commission.

D'wana Terry,

Chief, Public Safety and Private Wireless Division.

FEDERAL COMMUNICATIONS COMMISSION

Public Information Collection(s) Approved by Office of Management and Budget

May 18, 1998.

The Federal Communications Commission (FCC) has received Office of Management and Budget (OMB) approval for the following public information collection(s) pursuant to the Paperwork Reduction Act of 1995, 44 USC 3501–3520. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. Notwithstanding any other provisions of law, no person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act that does not display a valid control number. Questions concerning the OMB control numbers and expiration dates should be directed to Jerry Cowden, Federal Communications Commission, (202) 418–0447.

Federal Communications Commission

OMB Control No.: 3060–0221.

Expiration Date: 4/30/2001.

Title: 90.155 Time in which station must be placed in operation.

Form Number: Not applicable.

Estimated Annual Burden: 55 hours; 1 hour per respondent; 55 respondents.

Description: This information collection is needed to provide flexibility to state and local governments that would normally be unable to meet the requirement of placing their radio station in operation within eight months. The information is used to evaluate if the exception to the

eight month requirement is warranted. If the information were not collected the Commission's information regarding actual loading of frequencies would be inaccurate.

OMB Control No.: 3060–0286.
Expiration Date: 4/30/2001.
Title: 80.302 Notice of discontinuance, reduction, or impairment of service involving a distress watch.
Form Number: Not applicable.
Estimated Annual Burden: 160 hours; 1 hour per respondent; 160 respondents.
Description: This rule is needed to ensure that the U.S. Coast Guard is informed when a coast station discontinues, reduces or impairs a listening watch required to be maintained on a marine safety frequency.

OMB Control No.: 3060–0330.
Expiration Date: 4/30/2001.
Title: Part 62—Applications to Hold Interlocking Directorates.
Form Number: N/A.
Estimated annual burden: 20 hours; 2 hours per response; 10 respondents.
Description: Congress mandated this information collection under 47 USC 212 to be conducted by the FCC to monitor the effect of interlocking directorates on the telecommunications industry and to ensure they will not have any anticompetitive impact.

OMB Control No.: 3060–0361.
Expiration Date: 4/30/2001.
Title: 80.29 Changes during license term.
Form Number: Not applicable.
Estimated annual burden: 250 hours; 1 hour per response; 250 respondents.
Description: The information is used by the FCC to update the coast and ship station license files and data base concerning current name and address of licensees. Information concerning changes in the names of vessels is also used to update the ITU List of Ship Stations.

OMB Control No.: 3060–0807.
Expiration Date: 4/30/2001.
Title: 47 CFR Section 51.803 and Supplemental Procedures for Petitions Pursuant to Section 252(e)(5) of the Communications Act of 1934, as amended.
Form Number: Not applicable.
Estimated annual burden: 2,040 hours; 39.23 hours (average) per response; 52 respondents.
Description: Any interested party seeking preemption of a state commission's jurisdiction based on the state commission's failure to act shall notify the Commission (47 USC 252(e)(5) and 47 CFR Section 51.803). In a Public Notice the Commission set out procedures for filing petitions for preemption pursuant to section 252(e)(5). All the information will be used to ensure that petitioners have complied with their obligations under the Communications Act of 1934, as amended.

Federal Communications Commission.
Magalie Roman Salas,
Secretary.

BILLING CODE 6712–01–P

FEDERAL MARITIME COMMISSION

[Petition P3–98]

In Re: The Impact of Modern Technology on the Customs and Practices of the Freight Forwarding Industry—Petition for Rulemaking; Notice of Filing of Petition

Notice is given that a petition for rulemaking or, alternatively, for a declaratory order, has been filed by R.F. International Ltd. ("Petitioner"). Petitioner seeks a rulemaking to address and evaluate the impact of modern technology on the customs and practices of the freight forwarding industry and the regulations governing those customs and practices. Petitioner seeks review of guidelines regarding freight forwarding, freight forwarding fees, and freight forwarder compensation in view of trends in high-technology freight forwarding and seeks guidelines for the provision of "in-plant" forwarding services provided by licensed freight forwarders.

In the event of denial of this petition for rulemaking, Petitioner requests that this petition be treated as a request for a declaratory order to allow Petitioner to act without peril on its own view.

Interested persons are requested to reply to the petition no later than June 25, 1998. Replies shall specify the desired disposition of the petition and to the extent applicable, shall specify the substance of any rule or order supported. Replies shall be directed to the Secretary, Federal Maritime Commission, Washington, D.C. 20573–0001, shall consist of an original and 15 copies, and shall be served on counsel for Petitioner, Leonard L. Fleisig, Esq. Eckert, Seamans, Cherin and Mellott LLC, 1250 24th Street, N.W., Suite 700, Washington, D.C. 20007.

Copies of the petition are available for examination at the Washington, D.C. Office of the Secretary of the Commission, 800 N. Capitol Street, N.W., Room 1046.

Joseph C. Polking,
Secretary.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Committee on Immunization Practices: Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), the Centers for Disease Control and Prevention (CDC) announces the following committee meeting.

Name: Advisory Committee on Immunization Practices (ACIP).
Times and Dates: 8:15 a.m.–6:15 p.m., June 24, 1998; 8:00 a.m.–4:00 p.m., June 25, 1998.
Place: CDC, Auditorium B, Building 2, 1600 Clifton Road, NE, Atlanta, Georgia 30333.
Status: Open to the public, limited only by the space available.
Purpose: The Committee is charged with advising the Director, CDC, on the appropriate uses of immunizing agents. In addition, under 42 U.S.C. 1396s, the Committee is mandated to establish and periodically review and, as appropriate, revise a list of vaccines for administration to vaccine-eligible children through the Vaccines for Children (VFC) Program, along with schedules regarding the appropriate periodicity, dosage, and contraindications applicable to the vaccines.
Matters to be Discussed: Agenda items include a summary of the meeting on "Evaluating the Role of Vaccines and Infectious Diseases in Autoimmune Disease: Insulin Dependent (Type 1) Diabetes Mellitus'; updates on the National Immunization Program; the Vaccine Injury Compensation Program; the National Vaccine Program; and HIV vaccine. Also on the agenda, a discussion of financial disclosure and voting protocol for ACIP; rotavirus vaccine data on differences in morbidity by socioeconomic group, update on cost benefit data, use of vaccine in premature infants, and rotavirus disease in immunocompromised persons; a review of changes in the draft rabies vaccine recommendation; computer algorithms for ACIP recommendations; hepatitis A vaccine; consolidate resolutions currently included in the VFC Program; harmonizing recommendation on combination vaccines with the American Academy of Pediatrics and the American Academy of Family Physicians; use of lyme disease vaccine; progress towards development of a revised influenza recommendation; and intravenous immunoglobulin products. Other matters of relevance among the Committee's objectives may be discussed.

Agenda items are subject to change as priorities dictate.

Contact Person for More Information: Gloria A. Kovach, Committee Management Specialist, CDC, 1600 Clifton Road, NE, M/S D50, Atlanta, Georgia 30333, telephone 404/639–7250.

Dated: May 19, 1998.

Nancy C. Hirsch,

Acting Director, Management Analysis and Services Office Centers for Disease Control and Prevention (CDC).

Health Care Financing Administration

Statement of Organization, Functions and Delegations of Authority

Part F, of the Statement of Organization, Functions, and Delegations of Authority of the Department of Health and Human Services, Health Care Financing Administration (HCFA), 49 FR 34247, dated September 6, 1984, is amended to include the following delegation of authority from the Secretary to the Administrator, HCFA, for the Federal Technology Transfer Act of 1986.

• Section F.30., Delegations of Authority is amended by adding the following paragraph:

TT. The authorities vested in the Secretary by the Stevenson-Wydler Technology Innovation Act of 1980, as amended by the Federal Technology Transfer Act of 1986, the National Technology Transfer and Advancement Act of 1995 and subsequent amendments.

This delegation shall be exercised under the Department's existing delegation of authority and policy on regulations. In addition, I hereby affirm and ratify any actions taken by the HCFA Administrator or other HCFA officials which, in effect, involved the exercise of this authority prior to the effective date of this delegation.

This delegation is effective immediately.

Dated: May 15, 1998.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of General Medical Sciences; Submission for OMB Review; Comment Request; Application for the Pharmacology Research Associate Program

Summary: Under the provisions of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the National Institute of General Medical Sciences (NIGMS), the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request to review and approve the information collection listed below. This proposed information collection was previously published in the **Federal Register** on March 3, 1998, page 10404, and allowed 60 days for public comment. No public comments were received. The purpose of this notice is to allow an additional 30 days for public comment. The National Institutes of Health may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Proposed Collection

Title: Application for the Pharmacology Research Associate Program. *Type of Information Collection Request:* Revision of a currently approved collection. *Need and Use of Information Collection:* The Pharmacology Research Associate (PRAT) Program will use the applicant and referee information to award opportunities for training and experience in laboratory or clinical investigation to individuals with a Ph.D degree in pharmacology or a related science, M.D., or other professional degree through appointments as PRAT Fellows at the National Institutes of Health or the Food and Drug Administration. The goal of the program is to develop leaders in pharmacological research for key positions in academic, industrial, and Federal research laboratories. *Frequency of Response:* Once a year. *Affected Public:* Individuals or households; businesses or other for-profit.

The annual reporting burden is as follows:

Type and number of respondents	Estimated number of responses per respondent	Estimated total responses	Average burden hours per responses	Estimated total annual burden hours requested
Applicants: 50	1	50	2.00	100
Referees: 150	1	150	0.167	25

Total Number of Respondents: 200.
Total Number of Responses: 200.
Total Hours: 125.

The annualized cost to respondents is estimated at:

Applicants: $5,500.00.
Referees: $1,250.00.

Request for Comments

Written comments and/or suggestions from the public and affected agencies should address one or more of the following points: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Direct Comments To OMB

Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the Office of Management and Budget, Office of Regulatory Affairs, New Executive Office Building, Room 10235, Washington, D.C. 20503, Attention: Desk Officer for NIH. To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact: Ms. Sally Lee, NIGMS, NIH, Natcher Building Room 3AS–13, 45 Center

Drive, MSC 6200, Bethesda, MD 20892–6200. Phone (301) 594–2749, facsimile (301) 480–0850, or electronic mail: LeeS@nigms.nih.gov.

Comments Due Date

Comments regarding this information collection are best assured of having their full effect if received on or before June 25, 1998.

Dated: May 13, 1998.

Martha Pine,

Executive Officer, NIGMS.

National Institutes of Health

National Institute on Deafness and Other Communication Disorders; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, amended (5 United States Code Appendix 2), notice is hereby given of the following meeting:

Name of Committee: Communication Disorders Review Committee.

Date: June 10–11, 1998.

Time: 8 a.m.–5 p.m., June 10, 8 .am.–adjournment, June 11.

Place: Holiday Inn Chevy Chase, 5520 Wisconsin Avenue, Chevy Chase, MD 20815.

Contact Person: Melissa J. Stick, Ph.D., Scientific Review Administrator, NIDCD/DEA/SRB, EPS Room 400C, 6120 Executive Boulevard, MSC 7180, Bethesda, MD 20892–7180, 301–496–8683.

Purpose/Agenda: To review and evaluate grant applications.

The meeting will be closed in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5, United States Code. The applications and/or proposals and the discussion could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the applications and/or proposals, the disclosure of which could constitute a clearly unwarranted invasion of personal privacy.

Recombinant DNA Advisory Committee; Amended Notice of Meeting

Notice is hereby given of a change in the meeting of the Recombinant DNA Advisory Committee meeting, June 18–19, 1998, National Institutes of Health, Bethesda, Maryland which was published in the **Federal Register** on May 4, 1998 (63 FR 24712).

The entire meeting was scheduled to be open to the public, but now in accordance with sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., the meeting may be closed to the public on June 18 from approximately 2:00 p.m. to approximately 3:15 p.m. and on June 19 from approximately 2:45 p.m. to approximately 4:00 p.m. for the discussion of protocols. These discussions could disclose trade secrets and commercial property such as patentable material and personal information concerning individuals associated with the protocols, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Dated: May 19, 1998.

BILLING CODE 4140–01–M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Notice of Intent To Reconsider Procedures for Administration of Funding for National Conservation Priorities Under the Federal Aid in Wildlife Restoration Act and the Federal Aid in Sport Fish Restoration Act

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice.

SUMMARY: The Fish and Wildlife Service will reconsider procedures for administration of national projects funded from Federal Aid in Wildlife Restoration Act and Federal Aid in Sport Fish Restoration Act administrative funds. The Service intends to publish a full range of options for funding future national conservation priorities in the **Federal Register** for public review and comment. Interested persons should contact the Service to receive a copy of the options.

DATES: The Service intends to publish these options in the **Federal Register** on or about September 1, 1998.

ADDRESSES: Requests to receive copies of the proposed options should be sent to Mr. Tom Taylor, Division of Federal Aid, U.S. Fish and Wildlife Service, 4401 N. Fairfax Drive, Room 140, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Tom Taylor, Division of Federal Aid, U.S. Fish and Wildlife Service; telephone (703) 358–2156, fax (703) 358–1837.

SUPPLEMENTARY INFORMATION: The Federal Aid in Wildlife Restoration Act (16 U.S.C. 669) and the Federal Aid in Sport Fish Restoration Act (16 U.S.C. 777) make funds available to states for qualifying grants on a three-to-one-matching basis. Provisions of both Acts authorize the Secretary to utilize a certain percentage of the funds available for each program for expenses in administering the Federal Aid program. Specifically, the Secretary is authorized to utilize up to 8 percent of funds available under the Wildlife Restoration Act for necessary administration of the program while the Sport Fish Restoration Act allows the Secretary to utilize up to 6 percent of available funds for administrative purposes. The Service has utilized much of this authorized funding by awarding grants for projects that have been identified by states collectively as national priorities.

The Service has identified specific focus areas in soliciting proposals for this year's funding. (63 FR 17882 published April 10, 1998). Grants will be awarded by the Service after reviewing proposals for eligibility and receiving priority rankings by the Grants-in-Aid Committee of the International Association of Fish and Wildlife Agencies, an organization representing state fish and wildlife agencies.

This notice advises the public that the Service will develop a full range of options for funding future national conservation priorities pursuant to the Federal Aid in Wildlife Restoration Act and Federal Aid in Sport Fish Restoration Act. The Service intends to publish these options in the **Federal Register** on or about September 1, 1998, for a 60-day period of public review and comment. Interested persons contacting the Service will be put on a mailing list to receive a copy of the options which will be developed for the aforementioned public review and comment.

Each request should include a complete mailing address to which the proposed options will be sent.

Dated: May 15, 1998.

Jamie Rappaport Clark,

Director.

BILLING CODE 4310–55–M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[WY–030–1990–00]

Notice of Availability

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability of the finding of no significant impact (FONSI) and proposed decision for the Shirley Mountain Planning Review Travel Management Environmental Assessment (EA), Carbon County, Wyoming, and amendment of the Great Divide Resource Management Plan.

SUMMARY: The Shirley Mountain Planning Review Area contains approximately 69,590 acres of intermingled public, private, and State lands located approximately 40 miles northwest of the town of Medicine Bow, all in Carbon County, Wyoming. The planning review was conducted to determine the impacts to the BLM administered public lands, adjacent non-Federal lands, and associated resource uses resulting from a proposed amendment to the Great Divide Resource Management Plan (RMP). The proposed RMP decision amendment would change the current Off Road Vehicle (ORV) designation in the area from "limited to existing roads and trails" to "limited to designated roads and trails" and includes several requirements and stipulations for implementing the changed decision.

DATES: A 30-day protest period for the proposed planning decision will begin the day following the publication of this notice.

ADDRESSES: Protests must be addressed in writing to the Director (210), Bureau of Land Management, Attention Brenda Williams, 1849 C Street NW, Washington, D.C. 20240. Protests must be postmarked within 30 days following the date that this notice of availability (NOA) of the proposed decision is published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Interested parties may direct questions, concerns, or obtain further information by contacting Karla Swanson, Great Divide Resource Area Manager, Sarah Crocker, Project Leader, or John Spehar, Planning and Environmental Coordinator, at the Bureau of Land Management Office, 1300 N. Third Street, Rawlins, Wyoming 82301, or by telephone at 307–328–4200.

SUPPLEMENTARY INFORMATION: The need for an ORV designation change within the planning review area is based upon recommendations made by the ad hoc Shirley Mountain Technical Committee and previously completed studies and activity plans. In 1985, the BLM completed a Habitat Management Plan (HMP) for Shirley Mountain. The HMP recommended that several two-track trails be closed to motorized vehicle travel because they were fragmenting wildlife habitat, were unnecessary for adequate public access to public lands, and had associated erosion problems. In 1994, the Wyoming Game and Fish Department completed a habitat analysis for the Shirley Mountain area identifying habitat problems impacting wildlife populations and potential solutions. The study found that the majority of hiding cover for large game animals was heavily dissected by a system of roads and trails. Security areas for these animals during hunting season were very limited. The study recommended that future BLM management restrict the construction of new roads and that a plan be developed to manage recreational road and trail use and to reduce road and trail proliferation. A change in ORV designation for the Shirley Mountain Planning Review Area will allow the BLM to implement a travel management plan in the future. Included in the decision to change the ORV designation for the review area are requirements and stipulations for implementing the ORV designation decision. These include the development of a travel activity or implementation plan. As provided in 43 Code of Federal Regulations, Part 1610.5–2, any person who participated in the planning review process and has an interest which is or may be adversely affected by the approval or amendment of a resource management plan may protest such approval or amendment. A protest may concern only those issues which were raised and submitted for the record during the planning review process and by only the party(ies) who raised the issue(s). All parts of the proposed decision may be protested. Protests must be in writing and must be postmarked within 30 days following the date this notice of availability of the decision record is published in the **Federal Register**. Protests must include (a) the name, mailing address, telephone number, and interest of the person filing the protest; (b) a statement of the issue or issues submitted during the planning process by the protesting party; (c) a statement of the part, or parts, of the proposed decision being protested; (d) a copy of all documents addressing the issue or issues that were submitted during the planning review process by the protesting party or an indication of the date the issue or issues were

discussed for the record; and (e) a concise statement explaining why the State Director's proposed decision is believed to be wrong.

If no protests are received, the proposed decision will become final at the end of the 30-day protest period. If protests are received, the decision will not become final until the protests are resolved.

Dated: May 19, 1998.

Alan R. Pierson,

State Director.

BILLING CODE 4310–22–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

(AK–932–1410–00; AA–65185)

Public Land Order No. 7331; Partial Revocation of Public Land Order No. 725, Alaska

AGENCY: Bureau of Land Management, Interior.

ACTION: Public land order.

SUMMARY: This order revokes a public land order insofar as it affects approximately 200 acres of National Forest System land withdrawn for use by the Forest Service, Department of Agriculture, for the Lower Summit Lake Recreation Area. The land is no longer needed for the purpose for which it was withdrawn. This action also allows the conveyance of the land to the State of Alaska, if such land is otherwise available. Any land described herein that is not conveyed to the State is opened and will be subject to the terms and conditions of the national forest reservation and any other withdrawal of record.

EFFECTIVE DATE: May 26, 1998.

FOR FURTHER INFORMATION CONTACT: Robbie J. Havens, BLM Alaska State Office, 222 W. 7th Avenue, No. 13, Anchorage, Alaska 99513–7599, 907–271–5049.

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714 (1994), it is ordered as follows:

1. Public Land Order No. 725, which withdrew National Forest System land for recreational purposes, is hereby revoked insofar as it affects the following described land:

Seward Meridian

Chugach National Forest

T. 7 N., R. 1 W., partly unsurveyed.

All land within ¼ mile of the mean high water line of Lower Summit Lake within:

Sec. 28, W½SW¼;
Sec. 29, E½SE¼;
Sec. 32, N½NE¼, E½SW¼NE¼, and NW¼SW¼NE¼.

The area described contains approximately 200 acres.

2. The State of Alaska applications for selection made under Section 6(a) of the Alaska Statehood Act of July 7, 1958, 48 U.S.C. note prec. 21 (1994), and under Section 906(e) of the Alaska National Interest Lands Conservation Act, 43 U.S.C. 1635(e) (1994), become effective without further action by the State upon publication of this public land order in the **Federal Register**, if such land is otherwise available. Land not conveyed to the State is opened and will be subject to the terms and conditions of the Chugach National Forest reservation and any other withdrawal of record.

Dated: May 14, 1998.

Bob Armstrong,

Assistant Secretary of the Interior.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[ES–960–1420–00, ES–046131, Group 60 Louisiana]

Notice of Filing of Plat of Dependent Resurvey, Suspension Lifted

On Thursday, December 22, 1994, there was published in the **Federal Register**, Volume 59, Number 245, on page 66046, a notice entitled, "Filing of Plat of Dependent Resurvey, Suspended," said notice referenced the suspension of the plat of the dependent resurvey of the west boundary of Township 7 South, Range 9 East, Louisiana Meridian, Louisiana, accepted on May 24, 1993.

The decision of the Bureau of Land Management dismissing the protest of the dependent resurvey, Group 60, Louisiana was affirmed by the Interior Board of Land Appeals in a decision dated March 17, 1998. The plat of survey accepted May 24, 1993, was officially refiled in Eastern States, Springfield, Virginia, at 7:30 a.m., on May 18, 1998.

Copies will be furnished upon request and prepayment of the appropriate fee.

Dated: May 18, 1998.

[WY–920–1430–11; WYW 4471–C]

Public Land Order No. 7330; Modification and Partial Revocation of 9 Executive Orders, 17 Secretarial Orders, and 8 Bureau of Land Management Orders; Wyoming

AGENCY: Bureau of Land Management, Interior.

ACTION: Public Land Order.

SUMMARY: This order modifies 9 Executive orders, 17 Secretarial orders, and 8 Bureau of Land Management Orders to establish a 20-year term as to 15,503.70 acres of public lands withdrawn for Bureau of Land Management public water reserves. These withdrawals are also modified to allow for nonmetalliferous mining location on all but 170 acres of the 15,503.70 acres. This order also partially revokes the above orders insofar as they affect 30,023.80 acres of public lands withdrawn for Bureau of Land Management public water reserves. These lands do not meet the criteria for a public water reserve. This action will open the 30,023.80 acres to surface entry and nonmetalliferous mining. All of the lands have been and will remain open to metalliferous mining location and to mineral leasing.

EFFECTIVE DATE: June 25, 1998.

FOR FURTHER INFORMATION CONTACT: Jim Paugh, BLM Wyoming State Office, P.O. Box 1828, Cheyenne, Wyoming 82003, 307–775–6306.

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714 (1994), it is ordered as follows:

1. The Executive Orders dated April 19, 1912, as modified July 24, 1913, March 3, 1933, and November 16, 1933; March 21, 1914; February 19, 1916; August 2, 1916; February 25, 1919; October 27, 1920; March 9, 1927; February 14, 1933; June 15, 1934; March 9, 1927, and the Secretarial Orders dated December 29, 1926; March 15, 1929; January 18, 1930; April 15, 1931; September 23, 1931; April 8, 1932; September 27, 1932; February 15, 1933; June 16, 1933; May 26, 1934; November 19, 1934; March 28, 1935; January 18, 1935; June 21, 1935; June 22, 1935; September 11, 1935, and the BLM Orders of August 12, 1955; September 24, 1957; January 16, 1958; September 23, 1958; August 21, 1959; February 17, 1960; March 27, 1962, and January 25, 1971, creating Public Water Reserves

No(s). 3, 32, 36, 58, 75, 107, 108, 149, and 155, are hereby revoked insofar as they affect the following described lands:

The areas described aggregate 30,023.80 acres in Fremont, Sublette, Sweetwater, and Uinta Counties.

2. At 10 a.m. on June 25, 1998, the lands in paragraph 1 will be opened to the operation of the public land laws generally, subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. All valid applications received at or prior to 10 a.m. June 25, 1998, shall be considered as simultaneously filed at that time. Those received thereafter shall be considered in the order of filing.

3. The Executive orders, Secretarial orders, and Bureau of Land Management orders listed in paragraph 1 are hereby modified to expire 20 years from the effective date of this order, unless, as a result of a review conducted before the expiration date pursuant to the Federal Land Policy and Management Act

Section 1714(f) (1994), the Secretary determines that the withdrawals shall be extended insofar as they affect the following described lands:

Sixth Principal Meridian

T. 14 N., R. 120 W.,
Sec. 14, E½NW¼.

The areas described aggregate 15,503.70 acres in Fremont, Sublette, Sweetwater, and Uinta Counties.

The lands described shall continue to be segregated from the operation of the public land laws generally.

4. At 10 a.m. on June 25, 1998, the lands described in paragraphs 1 and 3, except those lands described in paragraph 5, shall be opened to nonmetalliferous mineral location and entry under the United States mining laws, subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. Appropriation of any of the lands for nonmetalliferous minerals under the general mining laws prior to the date and time of restoration is unauthorized. Any such attempted appropriation, including attempted adverse possession under 30 U.S.C. Sec. 38 (1994), shall vest no rights against the United States. Acts required to establish a location and to initiate a right of possession are governed by State law where not in conflict with Federal law. The Bureau of Land Management will not intervene in disputes between rival locators over possessory rights since Congress has provided for such determinations in local courts.

The lands described in paragraphs 1 and 3 have been and will continue to be open to metalliferous mineral location and entry under the United States mining laws and to applications and offers under the mineral leasing laws.

5. The following Public Water Reserves will remain segregated from nonmetalliferous mineral location:

a. The land described below is in an area were water supplies are extremely deficient and there are some occurrences of zeolite deposits. Mineral exploration and development activities would destroy an important water source.

Sixth Principal Meridian

T. 17 N., R. 96 W.,
Sec. 20, NW¼NE¼.

b. The land described below is within a developed public recreation area.

T. 21 N., R. 105 W.,
Sec. 32, W½SE¼, SW¼NE¼SE¼, and SE¼SE¼.

The areas described above aggregate 170 acres in Sweetwater County.

Dated: May 14, 1998.

Bob Armstrong,

Assistant Secretary of the Interior.

BILLING CODE 4310–70–P

DEPARTMENT OF THE INTERIOR

National Park Service

Notice of Receipt of Applications Received for Access to National Park Service Property for the Siting of Mobile Services Antennas

AGENCY: National Park Service, Department of the Interior.

ACTION: Public notice of the receipt of an application for a right-of-way permit for a wireless telecommunications facility and the acceptance of public comment.

SUMMARY: Public Notice is hereby given that the National Park Service has received two applications from Bell Atlantic Mobile for a right-of-way permit to construct, operate and maintain a wireless telecommunications site within Rock Creek Park.

One application is for the Fitzgerald Tennis Center. The proposed facility consists of an antenna incorporated into the existing Tennis Center lights, which would raise the light pole height from the current 50 feet, to 78 feet to 100 feet. Additionally, there is a proposed 12 feet by 30 feet shelter to house associated equipment.

The second application is for the Rock Creek Maintenance Facility. The proposed facility includes installation of a 100 foot monopole. There is a

proposed 12 feet by 30 feet by 30 feet shelter to house associated equipment.

ADDRESSES: Comments concerning this application should be directed to: National Park Service, Superintendent Adrienne Coleman, 3545 Williamsburg Lane, NW., Washington, DC 20008, Phone (202) 282–1063.

Interested parties may review the application at Rock Creek Park Headquarters, 3545 Williamsburg Lane, NW, Washington, DC 20008.

Written comments must be received within 30 days from the date of this notice.

Cynthia Cox,

Assistant Superintendent.

BILLING CODE 4310–70–M

INTERNATIONAL TRADE COMMISSION

[Inv. No. 337–TA–395]

In the Matter of Certain Eprom, Eeprom, Flash Memory, and Flash Microcontroller Semiconductor Devices, and Products Containing Same; Notice of Commission Decision To Extend Target Date for Completion of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined to extend the target date for completion of the above-captioned investigation from June 22, 1998 to June 29, 1998, to accommodate a revised briefing schedule.

FOR FURTHER INFORMATION CONTACT: John A. Wasleff, Esq., Office of the General Counsel, U.S. International Trade Commission, telephone 202–205–3094.

SUPPLEMENTARY INFORMATION: This investigation was instituted on March 18, 1997, based on a complaint filed by Atmel Corporation. 62 FR 13706. The respondents named in the investigation are Sanyo Electric Co., Ltd., Winbond Electronics Corporation and Winbond Electronics North America Corporation, and Macronix International Co., Ltd.

Silicon Storage Technology, Inc. was permitted to intervene. At issue are claim 1 of U.S. Letters Patent 4,511,811, claim 1 of U.S. Letters Patent 4,673,829, and claims 1–9 of U.S. Letters Patent 4,451,903.

On May 6, 1998, the Commission determined to review portions of the presiding Administrative Law Judge's final initial determination and requested the parties to brief certain questions to aid the Commission's review. 63 FR 25867. The Commission directed the parties to file their main briefs responding to the Commission's notice of review by May 20, 1998, and their reply briefs by May 28, 1998. On May 18, 1998, a motion of respondent Winbond to extend the filing deadline for main briefs to May 26, 1998, and the filing deadline for reply briefs to June 2, 1998, was granted. The extensions apply to all parties.

This action is taken under the authority of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) and section 210.51 of the Commission's Rules of Practice and Procedure (19 CFR 210.51).

Copies of the public version of the Administrative Law Judge's final initial determination and all other nonconfidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone 202–205–2000. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202–205–1810. General information concerning the Commission may also be obtained by accessing its Internet server (http://www.usitc.gov).

Issued: May 19, 1998.

By order of the Commission.

Donna R. Koehnke,

Secretary.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Federal Insecticide Fungicide and Rodenticide Act and the Federal Trade Commission Act

In accordance with Departmental policy, 28 CFR 50.7, notice is hereby given that a proposed Consent Decree in *United States of America* v. *Accuventure, et. al* Civil Action No. 96–588–JE, was lodged on May 11, 1998 with the United States District Court for the District of Oregon. In its Complaints, the United States asserted claims against four corporations and two individuals under the Federal Insecticide, Fungicide, and Rodenticide Act, 7 U.S.C. § 136. seq. and under Section 5(a) of the Federal Trade Commission Act ("FTCA"), 15 U.S.C. § 45(a). The claims concerned defendants' sale and advertisement of water filtering and purification products that were not registered as pesticides under FIFRA.

The Consent Decree provides for injunctive relief that restricts the defendants' future ability to distribute and advertise water treatment and filtering products. The Consent Decree also requires defendants to pay a civil penalty of $20,000.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General of the Environment and Natural Resources Division, Department of Justice, P.O. Box 7611, Ben Franklin Station, Washington, D.C. 20044. Comments should refer to *United States of America* v. *Accuventure et al.*, DOJ Ref. No. 1–1687

The proposed consent decree may be examined at the office of the United States Attorney, Districts of Oregon, District of Oregon, 1000 SW Third Avenue, Suite 600, Portland, OR 97204–2904; the Region X Office of the Environmental Protection Agency, 1200 Sixth Avenue, Seattle, WA 98101; and at the Consent Decree Library, 1120 G Street, N.W., 4th Floor, Washington, DC 20005, (202) 624–0892. A copy of the proposed Consent Decree may be obtained in person or by mail from the Consent Decree Library.

In requesting a copy, please enclose a check in the amount of $8.50 (25 cents per page reproduction cost0 payable to the "Consent Decree Library."

Joel M. Gross,

Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

[FR Doc. 98–13894 Filed 5–22–98; 8:45 am]

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE

Notice of Consent Decree Pursuant to the Comprehensive Environmental Response, Compensation and Liability Act

In accordance with Departmental Policy, 28 CFR 50.7, 38 FR 19029, and 42 U.S.C. 9622(i), notice is hereby given that a proposed Consent Decree in *United States* v. *William Davis, et al.*, Civ. Action No. 90–0484–T, was lodged in the United States District Court for the District of Rhode Island on May 15, 1998. The proposed Consent Decree resolves the United States' claims against National Starch & Chemical Co. under sections 106 and 107(a) of the Comprehensive Environmental

Response, Compensation and Liability Act ("CERCLA"), as amended, 42 U.S.C. 9607(a), concerning response actions at the Davis Liquid Waste Superfund Site located in Smithfield, Providence County, Rhode Island (the "Davis Site").

Under the terms of the Consent Decree, National Starch & Chemical Co. is required to pay $2,125,000 in two payments over two years to the United States in partial reimbursement of the United States' past and future costs. In addition, National Starch & Chemical Co. is jointly and severally responsible along with United Technologies Corp. ("UTC") and other previous settlers for the source control portion of the remedy at the Site.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, written comments relating to the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General for the Environment and Natural Resources Division, Department of Justice, Washington, D.C. 20530, and should refer to *United States* v. *William Davis, et al.*, Civ. Action No. 90–0484–T, DOJ #90–11–2–137B.

The proposed Consent Decree may be examined at the Office of the United States Attorney, District of Rhode Island, Westminster Square Building, 10 Dorrance Street, 10th Floor, Providence, Rhode Island 02903; at the Region I Office of the U.S. Environmental Protection Agency, 90 Canal Street, Boston, Massachusetts 02203; and at the Consent Decree Library, 1120 G Street, N.W., 4th Floor, Washington, D.C. 20005, (202) 624–0892. Copies of the Consent Decree may be obtained in person or by mail from the Consent Decree Library, 1120 G Street, NW 4th Floor, Washington, DC 20005. In requesting a copy, please enclose a check in the amount of $7.25 (25 cents per page reproduction costs) payable to the Consent Decree Library.

Joel M. Gross,

Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice: 98–064]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of agency report forms under OMB review.

SUMMARY: The National Aeronautics and Space Administration, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. 3506(c)(2)(A)). Information collection is required to ensure proper use of and disposition of rights to inventions made in the course of, and data developed under NASA contracts.

DATES: All comments should be submitted on or before July 27, 1998.

ADDRESSES: All comments should be addressed to Mr. Richard Kall, Code HK, National Aeronautics and Space Administration, Washington, DC 20546–0001.

FOR FURTHER INFORMATION CONTACT: Ms. Carmela Simonson, NASA Reports Officer, (202) 358–1223.

Title: Grant programs, intergovernmental relations.

OMB Number: 2700–0093.

Type of review: Extension.

Need and Uses: Recordkeeping and reporting is required to ensure proper accounting of Federal funds and property provided under grants and cooperative agreements to state and local governments.

Affected Public: State, Local or Tribal Government.

Number of Respondents: 16.

Responses Per Respondent: 6.

Annual Responses: 95.

Hours Per Request: 5 hrs.

Annual Burden Hours: 485.

Frequency of Report: On occasion.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice (98–066)]

NASA Advisory Council (NAC), Task Force on International Space Station Operational Readiness; Meeting

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, Public Law 92–463, as amended, the National Aeronautics and Space Administration announces an open meeting of the NASA Advisory Council Task Force on International Space Station Operational Readiness. Some members of the Task Force will be participating via telecon.

DATES: Tuesday, June 16, 1998, 2:00 p.m.–5:00 p.m. Eastern Time.

ADDRESSES: NASA Headquarters, 300 E Street, SW, Room 7W31, Washington, DC 20546.

FOR FURTHER INFORMATION CONTACT: Mr. Dennis McSweeney, Code IH, National Aeronautics and Space Administration, Washington, DC 20546–0001, 202/358–4556.

SUPPLEMENTARY INFORMATION: This meeting will be open to the public up to the seating capacity of the room. The agenda for the meeting is as follows:

—Review the results of the Task Force Working Group in International Space Station Test and Verification
—Review the results of the Task Force Working Group on International Space Station Crew Training
—Review of Task Force assessment on early ingress on International Space Station assembly missions 2A and 2A.1
—Review of Task Force assessment on plans of Mir deorbit

It is imperative that the meeting be held on these dates to accommodate the scheduling priorities of the key participants. Visitors will be requested to sign a visitors register.

Dated: May 19, 1998.

SUMMARY: In accordance with the Federal Advisory Committee Act. Pub. L. 92–463, as amended, the National Aeronautics and Space Administration announces a forthcoming meeting of the NASA Advisory Council, Life and Microgravity Sciences and Applications Advisory Committee, Space Station Utilization Advisory Subcommittee.

DATES: Monday, June 22, 1998, 8 a.m. to 5 p.m.; Tuesday, June 23, 1998, 8 a.m. to 5 p.m.; Wednesday, June 24, 1998, 8 a.m. to 5 p.m.; Thursday, June 25, 1998, 8 a.m. to 5 p.m.; Friday, June 26, 1998, 8 a.m. to 11:30 a.m.

ADDRESSES: Founders Inn and Conference Center, 5641 Indian River Road, Virginia Beach, VA.

FOR FURTHER INFORMATION CONTACT: Dr. Edmond M. Reeves, Code US, National Aeronautics and Space Administration, Washington, DC 20546, 202/358–2560.

SUPPLEMENTARY INFORMATION: The meeting will be open to the public up to the seating capacity of the room. Advance notice of attendance to the Executive Secretary is requested. The agenda for the meeting will include the following topics:

- Space Station development overview
- ISS utilization capabilities
- Research utilization plans
- Accommodation of human studies
- Communications capabilities
- Attached payload accommodation policy
- International partner utilization plans

It is imperative that the meeting be held on these dates to accommodate the scheduling priorities of the key participants. Visitors will be requested to sign a visitor's register.

Dated: May 19, 1998.

Matthew M. Crouch,

Advisory Committee Management Officer, National Aeronautics and Space Administration.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice 98–067]

NASA Advisory Council, Minority Business Resource Advisory Committee; Meeting

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, Public Law 92–463, as amended, the National Aeronautics and Space Administration announces a forthcoming meeting of the NASA Advisory Council, Minority Business Resource Advisory Committee.

DATES: Monday, June 15, 1998, 9:00 a.m. to 3:00 p.m. and Tuesday, June 16, 1998, 9:00 a.m. to 12:00 p.m.

ADDRESSES: Lewis Research Center, Administration Building, Room 215, 21000 Brookpark Road, Cleveland, OH, 44135–3191.

FOR FURTHER INFORMATION CONTACT: Mr. Ralph C. Thomas III, Office of Small and Disadvantaged Business Utilization, National Aeronautics and Space Administration, Room 9K70, 300 E Street SW, Washington, DC 20546, (202) 358–2088.

SUPPLEMENTARY INFORMATION: The meeting will be open to the public up to the seating capacity of the room. The agenda for the meeting is as follows:

June 15, 1998

- Call to Order
- Reading of Minutes
- Lewis Small Disadvantaged Business (SDB) Program
- Report of Chair
- Public Comment
- Center Directorate Reports
- Report on NASA FY 98 SDB Accomplishments
- Adjourn

June 16, 1998

- MBRAC Subpanel Reports
- Status of MBRAC Recommendations
- Special Issues
- Action Items
- Adjourn

It is imperative that the meeting be held on these dates to accommodate the scheduling priorities of the key participants. Visitors will be requested to sign a visitor's register.

Dated: May 19, 1998.

Matthew M. Crouch,

Advisory Committee Management Officer, National Aeronautics and Space Administration.

[Notice 98–065]

Notice of prospective patent license

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of Prospective Patent License.

SUMMARY: NASA hereby gives notice that AVE, Incorporated, of 343 Harrison Street, Denver, Colorado 80206, has applied for an exclusive license to practice the invention disclosed and claimed in U.S. Patent No. 5,661,494 entitled, "High Performance Circular Polarized Microstrip Antenna," NASA Case No. MSC–21982–1, assigned to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration. Written objections to the prospective grant of a license should be sent to Johnson Space Center.

DATES: Responses to this notice must be received by July 27, 1998.

FOR FURTHER INFORMATION CONTACT: Hardie R. Barr, Patent Attorney, Mail Code HA, NASA Johnson Space Center, Houston, Texas 77058, telephone (281) 483–1003.

Dated: May 14, 1998.

Edward A. Frankle,

General Counsel.

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice.

SUMMARY: NARA is giving public notice that the agency proposes to request extension of a currently approved information collection used by customers/researchers for ordering reproductions of NARA's motion picture, audio, and video holdings that are housed in the Washington, DC area of the National Archives and Records Administration. The public is invited to comment on the proposed information collection pursuant to the Paperwork Reduction Act of 1995.

DATES: Written comments must be received on or before July 27, 1998 to be assured of consideration.

ADDRESSES: Comments should be sent to: Paperwork Reduction Act Comments (NHP), Room 3200, National Archives and Records Administration, 8601 Adelphi Rd, College Park, MD 20740–6001; or faxed to 301–713–6913; or electronically mailed to tamee.fechhelm@arch2.nara.gov.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the proposed information collection and supporting statement should be directed to Tamee Fechhelm at telephone number 301–713–6730, or fax number 301–713–6913.

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13), NARA invites the general public and other Federal agencies to comment on proposed information collections. The comments and suggestions should address one or more of the following points: (a) Whether the proposed information collection is necessary for the proper performance of the functions of NARA; (b) the accuracy of NARA's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of information technology. The comments that are submitted will be summarized and included in the NARA request for Office of Management and Budget (OMB) approval. All comments will become a matter of public record. In this notice, NARA is soliciting comments concerning the following information collection:

Title: Item Approval Request List.

OMB number: 3095–0025.

Agency form number: NA Form 14110 and 14110A.

Type of review: Regular.

Affected public: Business or for-profit, nonprofit organizations and institutions, federal, state and local government agencies, and individuals or households.

Estimated number of respondents: 1,550.

Estimated time per response: 15 minutes.

Frequency of response: On occasion (when respondent requests copies of motion picture, audio, and video holdings from NARA).

Estimated total annual burden hours: 388 hours.

Abstract: The information collection is prescribed by 36 CFR 1254.72. The collection is prepared by researchers who cannot visit the appropriate NARA research room or who request copies of records as a result of visiting a research room. NARA offers limited provisions to obtain copies of records by mail and requires requests to be made on prescribed forms for certain bodies of records. NARA uses the Item Approval Request List form to track reproduction requests and to provide information for customers and vendors.

Dated: May 18, 1998.

L. Reynolds Cahoon,

Assistant Archivist for Human Resources and Information Services.

BILLING CODE 7515–01–P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice.

SUMMARY: NARA is giving public notice that the agency has submitted to OMB for approval the information collection described in this notice. The public is invited to comment on the proposed information collection pursuant to the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted to OMB at the address below on or before June 25, 1998 to be assured of consideration.

ADDRESSES: Comments should be sent to: Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: Ms. Maya Bernstein, Desk Officer for NARA, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the proposed information collection and supporting statement should be directed to Tamee Fechhelm at telephone number 301–713–6730 or fax number 301–713–6913.

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13), NARA invites the general public and other Federal agencies to comment on proposed information collections. NARA published a notice of proposed collection for this information collection on February 19, 1998 (63 FR 8502). No comments were received. NARA has submitted the described information collection to OMB for approval.

In response to this notice, comments and suggestions should address one or more of the following points: (a) whether the proposed collection information is necessary for the proper performance of the functions of NARA; (b) the accuracy of NARA's estimate of the burden of the proposed information collections; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of information technology. In this notice, NARA is soliciting comments concerning the following information collection:

Title: Statistical Research in Archival Records Containing Personal Information.

OMB number: 3095–0002.

Agency form number: None.

Type of review: Regular.

Affected public: Individuals.

Estimated number of respondents: 1.

Estimated time per response: 7 hours.

Frequency of response: On occasion.

Estimated total annual burden hours: 7 hours.

Abstract: The information collection is prescribed by 36 CFR 1256.16 and 36 CFR 1256.4. Respondents are researchers who wish to do biomedical

statistical research in archival records containing highly personal information. NARA needs the information to evaluate requests for access to ensure that the requester meets the criteria in 36 CFR 1256.4 and that the proper safeguards will be made to protect the information.

Dated: May 14, 1998.

L. Reynolds Cahoon,

Assistant Archivist for Human Resources and Information Services.

Space Planning for the National Archives and Records Administration; Public Meeting

The National Archives and Records Administration announces a meeting on Wednesday, June 3, 1998, from 7 p.m. to 9 p.m. at NARA's regional records services facility at 380 Trapelo Road, in Waltham, Massachusetts. This meeting will be open to the public.

This is one of a series of meetings at which NARA is seeking public input for a study of its space needs for the next 10 years. NARA representatives will explain the reasons for undertaking a space plan, its objectives, and the planning process, and will invite comments and answer questions. In addition to helping NARA with its planning, this meeting is part of a National Performance Review initiative called Conversations With America: My Government Listens. NARA urges everyone interested to attend.

For further information, contact Diane LeBlanc on 781–647–8745. Persons planning to attend the meeting are asked to call 781–647–8745 or send an e-mail to diane.leblanc@waltham.nara.gov. However, notice is not required.

Dated: May 20, 1998.

John W. Carlin,

Archivist of the United States.

NUCLEAR REGULATORY COMMISSION

[Docket No. IA 98–19 ASLBP No. 98–741–03-EA]

John Boshuk, Jr.; Establishment of Atomic Safety and Licensing Board

Pursuant to delegation by the Commission dated December 29, 1972, published in the **Federal Register**, 37 FR 28710 (1972), and Sections 2.105, 2.700, 2.702, 2.714, 2.714a, 2.717, 2.721, and 2.772(j) of the Commission's Regulations, all as amended, an Atomic Safety and Licensing Board is being established to preside over the following proceeding.

John Boschuk, Jr.

Order Prohibiting Involvement in NRC-Licensed Activities

IA 98–19

In accordance with 10 CFR 202, this Board is established as a result of the petitioner, John Boschuk, Jr., requesting a hearing on April 27, 1998, for an NRC Order issued April 10, 1998. The Order prohibits Mr. Boschuk from engaging in NRC-licensed activities for five years, requires him to inform the NRC of any NRC licensed entity or entities where he is involved and prohibits such involvements, and requires him to provide a copy of the Order to all such NRC-licensed entities.

The Board is comprised of the following administrative judges:

G. Paul Bollwerk, III, Chairman, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

Thomas D. Murphy, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

Frederick J. Shon, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

All correspondence, documents and other materials in this proceeding shall be filed with the Judges in accordance with 10 CFR 2.701.

Issued at Rockville, Maryland, this 18th day of May, 1998.

B. Paul Cotter, Jr.,

Chief Administrative Judge, Atomic Safety and Licensing Board Panel.

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–219]

GPU Nuclear, Inc.; Notice of Withdrawal of Application for Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has granted the request of GPU Nuclear Inc. (the licensee) to withdraw its July 16, 1997, application for proposed amendment to Facility Operating License No. DPR–16 for the Oyster Creek Nuclear Generating Station, located in Ocean County, New Jersey.

The proposed amendment would have revised the Oyster Creek Security Training and Qualification Plan. .

The Commission had previously issued a Notice of Consideration of Issuance of Amendment published in

the **Federal Register** on December 17, 1997 (62 FR 66138). However, by letter dated May 14, 1998, the licensee withdrew the proposed change.

For further details with respect to this action, see the application for amendment dated July 16, 1997, and the licensee's letter dated May 14, 1998, which withdrew the application for license amendment. The above documents are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room located at the Ocean County Library, Reference Department, 101 Washington Street, Toms River, New Jersey 08753.

Dated at Rockville, Maryland, this 19th day of May 1998.

For the Nuclear Regulatory Commission.

Ronald B. Eaton Sr.,

Project Manager, Project Directorate I–3, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

BILLING CODE 6325–01–P

SECURITIES AND EXCHANGE COMMISSION

[Rel. No. IC–23190; File No. 812–10958]

Baron Capital Funds Trust, et al.; Notice of Application

May 18, 1998.

AGENCY: Securities and Exchange Commission ("SEC" or "Commission").

ACTION: Notice of application for an order under Section 6(c) of the Investment Company Act of 1940, as amended (the "Act"), granting relief from Sections 9(a), 13(a), 15(a) and 15(b) of the Act, and Rules 6e–2(b)(15) and 6e–3(T)(b)(15) thereunder.

SUMMARY OF APPLICATION: Baron Capital Funds Trust and BAMCO, Inc., seek an order pursuant to Section 6(c) of the Act to the extent necessary to permit shares of any current or future series of the Trust designed to fund insurance products ("Insurance Funding Series") and shares of any other investment company or series thereof now or in the future registered under the Act that is designed to fund insurance products and for which the Adviser, or any of its affiliates ("Affiliates"), may in the future serve as investment adviser, administrator, manager, principal underwriter or sponsor (the Insurance Funding Series and each such other investment company being hereinafter referred to, collectively, as the "Funds") to be sold to and held by: (a) Variable annuity and variable life insurance separate accounts of both affiliated and unaffiliated life insurance companies ("Participating Insurance Companies"), and (b) certain qualified pension or retirement plans outside of the separate account context ("Plans").

APPLICANTS: Baron Capital Funds Trust ("Trust") and BAMCO, Inc. ("Adviser").

FILING DATES: The application was filed on January 12, 1998.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the Secretary of the SEC and serving Applicants with a copy of the request, personally or by mail. Hearing requests must be received by the SEC by 5:30 p.m. on June 12, 1998, and should be accompanied by proof of service on Applicants, in the form of an affidavit, or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons may request notification of a hearing by writing to the Secretary of the SEC.

ADDRESSES: Secretary, SEC, 450 Fifth Street, N.W., Washington, D.C. 20549. Applicants, Baron Capital Funds Trust, c/o Linda Martinson, 767 Fifth Avenue, New York, New York 10153; copy to Richard T. Prins, Esq., Skadden, Arps, Slate, Meagher & Flom LLP, 919 Third Avenue, New York, New York 10222.

FOR FURTHER INFORMATION CONTACT: Elisa D. Metzger, Senior Counsel, or Mark C. Amorosi, Branch Chief, Office of Insurance Products, Division of Investment Management, at (202) 942–0670.

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee from the Public Reference Branch of the SEC, 450 Fifth Street, N.W., Washington, DC 20549, (tel. (202) 942–8090).

Applicants' Representations

1. The Trust is a Delaware business trust and is registered under the Act as an open-end diversified management investment company. The Trust currently is composed of one series, Baron Capital Asset Fund, and is authorized to issue shares in separate series or classes. Additional series may be added in the future.

2. The Adviser is registered under the Investment Advisers Act of 1940 and is the investment adviser for the Trust. The Adviser is a wholly owned subsidiary of Baron Capital Group, Inc. ("BCG").

3. The Funds intend to offer shares to separate accounts established by Participating Insurance Companies to fund variable annuity and variable life insurance contracts ("Contracts"). Shares of each series of any of the Funds, including the Insurance Funding Series, also may be offered directly to Plans outside of the separate account context.

Applicants state that due to changes in the interpretation of the tax law by the Internal Revenue Service, the Funds are afforded an opportunity to increase their asset base through the sale of shares of the Funds to Plans. Section 817(h) of the Code imposes certain diversification standards on the underlying assets of variable annuity contracts and variable life contracts held by the portfolios of the Funds. The Code provides that such contracts shall not be treated as an annuity contract of life insurance contract for any period (and any subsequent period) for which the investments are not, in accordance with regulations prescribed by the Treasury Department, adequately diversified. On March 2, 1989, the Treasury Department issued Regulations (Treas. Reg. § 1.817–5) which establish diversification requirements for the investment portfolios underlying variable annuity and variable life contracts. The Regulations provide that, in order to meet the diversification requirements, all of the beneficial interests in the investment company must be held by the segregated asset accounts of one or more insurance companies. However, the Regulations also contain certain exceptions to this requirement, one of

which allows shares in an investment company to be held by a qualified pension or retirement plan without adversely affecting the ability of shares in the same investment company to also be held by the separate accounts of insurance companies in connection with their variable annuity and variable life contracts (Treas. Reg. § 1.817–5(f)(3)(iii)). To the extent permitted by applicable law, the Adviser or any Affiliate may act as investment adviser to Plans that will purchase shares of the Funds.

Applicants' Legal Analysis

1. Applicants seek an order exempting variable life insurance separate accounts of Participating Insurance Companies (and any principal underwriters and depositors of such accounts, and the Applicants) from Sections 9(a), 13(a), 15(a) and 15(b) of the Act, and Rule 6e–2(b)(15) and Rule 6e–3(T)(b)(15) thereunder, to the extent necessary to permit shares of the Funds to be offered and sold to, and held by, (1) variable annuity and variable life separate accounts of both affiliated and unaffiliated life insurance companies; and (2) qualified pension and retirement plans outside of the separate account context.

2. In connection with scheduled premium variable life insurance contracts issued through a separate account registered under the Act as a unit investment trust, Rule 6e–2(b)(15) provides partial exemptions from Sections 9(a), 13(a), 15(a) and 15(b) of the Act. The exemptions granted by Rule 6e–2(b)(15) are available only where all of the assets of the separate account consist of the shares of one or more registered management investment companies which offer their share "exclusively to variable life insurance separate accounts of the life insurer, or of any affiliated life insurance company." Therefore, the relief granted by Rule 6e–2(b)(15) is not available with respect to a scheduled premium variable life insurance separate account that owns shares of an investment management company that also offers its shares to a variable annuity separate account or a flexible premium variable life insurance separate account of the insurer or of any affiliated or unaffiliated insurance company. The use of a common investment management company as the underlying investment medium for both variable annuity and variable life insurance separate accounts is referred therein as "mixed funding." In addition, the relief granted by Rule 6e–2(b)(15) is not available if shares of the underlying investment management company are offered to variable annuity or variable life insurance separate accounts of unaffiliated life insurance companies. The use of a common management investment company as the underlying investment medium for separate accounts of unaffiliated insurance companies is referred to herein as "shared funding."

3. In connection with flexible premium variable life insurance contracts issued through a separate account registered under the Act as a unit investment trust, Rule 6e–3(T)(b)(15) provides partial exemptions from Sections 9(a), 13(a), 15(a), and 15(b) of the Act. The exemptions granted by Rule 6e–3(T)(b)(15) are available only where all of assets of the separate account consist of the shares of one or more registered management investment companies which offer their shares exclusively to separate accounts of the life insurer, or any affiliated life insurance company offering either scheduled premium variable life insurance contracts of flexible premium variable life insurance contracts, or both; or which also offer their shares to variable annuity separate accounts of the life insurer or of an affiliated life insurance company. Therefore, Rule 6e–3(T)(b)(15) permits mixed funding for flexible premium variable life insurance separate accounts under certain circumstances. The rule, however, does not permit shared funding, because the relief granted by the rule is not available with respect to a flexible premium variable life insurance separate account that owns shares of a management investment company that offers it shares to separate accounts (including flexible premium variable life insurance separate accounts) of unaffiliated life insurance companies.

4. Applicants state that the relief granted by Rules 6e–2(b)(15) and 6e–3(T)(b)(15) will not be negatively affected by the purchase of shares of the Funds by Plans. Because the relief under Rules 6e–2(b)(15) and 6e–3(T)(b)(15) is available only where shares of the investment company are offered exclusively to separate accounts, however, exemptive relief is necessary if shares of the Funds are also to be sold to Plans.

5. Section 9(a) of the Act provides that a company may not act as investment adviser to or principal underwriter for any registered open-end investment company if an affiliated person of that company, such as an officer, director or employee, is subject to a disqualification contained in Sections 9(a)(1) or (2). Rule 6e–2(b)(15)(i) and (ii) and Rule 6e–3(T)(b)(15)(i) and (ii) provide partial exemptions from Section 9(a) under certain circumstances, subject to the limitation on mixed and shared funding. These exemptions limit the application of the eligibility restrictions of Section 9(a) to those affiliated individuals or companies that participate directly in the management of the underlying fund.

6. The partial relief granted from Section 9(a) in Rules 6e–2(b)(15) and 6e–3(T)(b)(15) limits, in effect, the amount of monitoring necessary to ensure compliance with Section 9 to that which is appropriate in light of that section's policy and purposes. Applicants state that those rules recognize that it is not necessary for the protection of investors or the purposes fairly intended by the policy and provisions of the Act to apply to the provisions of Section 9(a) to individuals in a large insurance company complex, most of whom will have no connection with the investment company funding the separate accounts.

7. Applicants maintain that it is unnecessary to limit the applicability of the rules merely because the Funds may be sold in connection with mixed and shared funding. The Participating Insurance Companies are not expected to play any role in the management or administration of the Funds. Accordingly, Applicants state that applying the restrictions of Section 9(a) because of investment by other insurers' separate accounts would not serve any regulatory purpose. Additionally, Applicants submit that the reasons underlying the grant of relief from Section 9(a) will not be affected in any way by the proposed sale of the Funds to Plans.

8. Rules 6e–2(b)(15)(iii) and 6e–3(T)(b)(15)(iii) assume the existence of a pass-through voting requirement with respect to management investment company shares held by a separate account. Rules 6e–2(b)(15)(iii) and 6e–3(T)(b)(15)(iii), however, provide exemptions from the pass-through voting requirement with respect to several significant matters, assuming the limitations on mixed and shared funding are observed. Rules 6e–2(b)(15)(iii)(A) and 6e–3(T)(b)(15)(iii)(A) provide that the insurance company may disregard the voting instructions of its contract owners with respect to the investments of an underlying fund or any contract between a fund and its investment adviser, when required to do so by an insurance regulatory authority, under certain circumstances. Rules 6e–2(b)(15)(iii)(B) and 6e–3(T)(b)(15)(iii)(A)(*2*) provide that the insurance company may disregard the voting instructions of contract owners in favor of any change in such company's

investment policies, principal underwriter, or any investment adviser, under certain circumstances.

9. Applicants state that, in adopting Rule 6e–2, the Commission expressly recognized that exemptions from pass-through voting requirements were necessary to assure the solvency of the life insurer and the performance of its contractual obligations by enabling an insurance regulatory authority or the life insurer to act when certain proposals reasonably could be expected to increase the risks undertaken by the life insurer. Flexible premium variable life insurance contracts and variable annuity contracts are subject to substantially the same state insurance regulatory authority, and therefore, corresponding provisions of Rule 6e–3(T) (which apply to flexible premium insurance contracts and which permit mixed funding) presumably were adopted in recognition of the same considerations as the Commission applied in adopting Rule 6e–2. Applicants assert that these considerations are no less important or necessary when an insurance company funds its separate accounts in connection with mixed and shared funding.

10. Applicants further state that where applicable, shares of the Funds sold to Plans will be held by the trustees of such Plans as required by Section 403(a) of ERISA. Section 403(a) also provides that the trustees must have exclusive authority and discretion to manage and control Plans with two exceptions: (a) when the Plan expressly provides that the trustees are subject to the direction of a named fiduciary who is not a trustee, in which case the trustees are subject to proper directions made in accordance with the terms of the Plan and not contrary to ERISA; and (b) when the authority to manage, acquire or dispose of assets of the Plan is delegated to one or more investment managers pursuant to Section 402(a)(3) of ERISA. Unless one of the two exceptions stated in Section 403(a) applies, the Plan trustees have exclusive authority and responsibility for voting proxies.

11. Where a named fiduciary appoints an investment manager, the investment manager has the responsibility to vote the shares held unless the right to vote such shares is reserved to the trustees or to the name fiduciary. The Plans may have their trustee(s) or other fiduciaries exercise voting rights attributable to investment securities held by the Plans in their discretion. Some of the Plans, however, may provide for the trustee(s), an investment adviser (or advisers) or another named fiduciary to exercise voting rights in accordance with instructions from participants in Plans ("Plan Participants").

12. Where a Plan does not provide Plan Participants with the right to give voting instructions, the Applicants do not see any potential for irreconcilable material conflicts of interest between or among Contract holders and Plan Participants with respect to voting of the respective Fund's shares. Accordingly, Applicants note that, unlike the case with insurance company separate accounts, the issue of the resolution of irreconcilable material conflicts with respect to voting is not present with respect to such Plans since the Plans are not entitled to pass-through voting privileges. Even if a Plan were to hold a controlling interest in a Fund, the Applicants do not believe that such control would disadvantage other investors in such Fund to any greater extent than is the case when any institutional shareholder holds a majority of the voting securities of any open-end management investment company. In this regard, the Applicants submit that investment in the Funds by a Plan will not create any of the voting complications occasioned by mixed funding or shared funding. Unlike mixed or shared funding, Plan Participant voting rights cannot be frustrated by veto rights of insurers of state regulators.

13. Where a Plan provides Plan Participants with the right to give voting instructions, the Applicants see no reason to believe that Plan Participants in Plans generally or those in a particular Plan, either as a single group or in combination with Plan Participants in other Plans, would vote in a manner that would disadvantage Contract holders. The purchase of shares of the Funds by Plans that provide voting rights does not present any complication not otherwise occasioned by mixed or shared funding.

14. Applicants represent that the Funds will inform each shareholder, including each separate account and Plan, of information necessary for the meeting including their respective share ownership in the Fund. A Participating Insurance Company will then solicit voting instructions consistent with the "pass through" voting requirement.

15. Applicants assert that no increased conflict of interest would be present if the requested relief is granted. Applicants maintain that shared funding does not present any issues that do not already exist where a single insurance company is licensed to do business in several states. For example, when different Participating Insurance Companies are domiciled in different states, it is possible that the state insurance regulatory body in a state in which one Participating Insurance Company is domiciled could require action that is inconsistent with the requirements of other insurance regulators in one or more other states in which other Participating Insurance Companies are domiciled. The possibility, however, also exists when a single insurer and its affiliates offer their insurance products in several states, as is currently permitted.

16. Applicants also assert that affiliations do not reduce the potential for differences in state regulatory requirements. In any event, the conditions set forth in the application and described below are designed to safeguard against any adverse effects that differences among state regulatory requirements may produce. If a particular state insurance regulator's decision conflicts with the majority of other state regulators, the affected insurer may be required to withdraw its separate account's investment in the relevant Funds.

17. Applicants maintain that affiliation does not eliminate the potential for divergent judgments as to when a Participating Insurance company could disregard Control holder voting instructions. The potential for disagreement is limited by the requirement that disregarding voting instructions be reasonable and based on specified good faith determinations. However, if the Participating Insurance Company's decision to disregard Contract holder voting instructions represents a minority position or would preclude a majority vote approving a particular change, such Participating Insurance Company may be required, at the election of the relevant Fund, to withdraw its separate account's investment in that Fund and no charge or penalty will be imposed upon the Contract holders as a result of such withdrawal.

18. Applicants submit that there is no reason why the investment policies of a Fund would or should be materially different from what it would or should be if it funded only variable annuity contracts or only variable life insurance contracts rather than Contracts and Plans. The Funds will not be managed to favor or disfavor any particular insurer or type of Contract. Regardless of the types of Fund shareholders, the Adviser is legally obligated to manage the Funds in accordance with each Fund's investment objectives, policies and restrictions as well as any guidelines established by the relevant Board of Directors or Trustees of the Funds. Applicants assert that the

Adviser does not give consideration to the identity of particular shareholders in a Fund, and, thus, manages the Funds in the same manner as any other mutual fund.

19. Applicants submit that there is no greater potential for material irreconcilable conflicts arising between the interests of participants and contract owners of separate accounts from possible future changes in the federal tax laws than that which already exists between variable annuity contract owners and variable life insurance contract owners.

20. Applicants note that while there are differences in the manner in which distributions from variable contracts and Plans are taxed, the tax consequences do not raise any conflicts of interest. When distributions are to be made, and a separate account or Plan is unable to net purchase payments to make the distributions, the separate account and Plan will redeem shares of their Funds at their net asset value. A Plan will make distributions in accordance with the terms of the Plan. A Participating Insurance Company will make distributions in accordance with the terms of the variable contract.

21. Applicants state that the ability of the Funds to sell their shares directly to Plans does not create a "senior security," as such term is defined under Section 18(g) of the Act, with respect to any Contract owner as opposed to a participant under a Plan. Applicants state that regardless of the rights and benefits of participants under the Plans or Contract owners under the Contracts, the Plans and the variable annuity and variable life insurance separate accounts only have rights with respect to their respective shares of the Funds. They can only redeem such shares at their net asset value. No shareholder of the Funds has any preference over any other shareholder with respect to distribution of assets or payment of dividends.

22. Applicants submit that there are not conflicts between Contract owners of separate accounts and participants under the Plans with respect to the state insurance commissioners' veto powers over investment objectives. The state insurance commissioners have been given the veto power in recognition of the fact that insurance companies usually cannot simply redeem their separate accounts out of one fund and invest in another. Generally, time-consuming, complex transactions must be undertaken to accomplish such redemptions and transfers. On the other hand, the Plans can make the decision quickly and implement the redemption of their shares from the Funds and reinvest in another funding vehicle without the same regulatory impediments or, or as is the case with most Plans, even hold cash pending suitable investment. Based on the foregoing, Applicants have concluded that even if there should arise issues where the interests of Contract owners and the interests of Plans are in conflict, the issues can be almost immediately resolved because the Plans can, on their own, redeem the shares out of the Funds.

23. Applicants state that various factors have kept more insurance companies from offering variable annuity contracts and variable life insurance contracts than currently offer such contracts. These factors include the costs of organizing and operating a funding medium, the lack of expertise with respect to investment management (principally with respect to stock and money market investments), and the lack of name recognition by the public as investment experts. For example, some smaller life insurance companies may not find it economically feasible, or within their investment or administrative expertise, to enter the variable contract business on their own. Use of a Fund as a common investment medium for variable contracts would reduce or eliminate these barriers.

24. Applicants maintain that the Participating Insurance Companies will benefit not only from the investment management and administrative expertise of the Adviser and its Affiliates, but also from the cost efficiencies and investment flexibility afforded by a large pool of funds. It would permit a greater amount of assets available for investment, thereby promoting economies of scale, permitting greater diversification, and making the addition of new portfolios more feasible. Additionally, making the Funds available for mixed and shared funding will encourage more insurance companies to offer variable contracts, and this should result in increased competition with respect to both variable contract design and pricing, which can be expected to result in more product variation and lower charges.

Applicants' Conditions

Applicants have consented to the following conditions if the order requested in the application is granted:

1. A majority of the Trustees or Board of Directors (each, a "Board") of the Trust and each Fund will consist of persons who are not "interested persons" thereof, as defined by Section 2(a)(19) of the Act and the rules thereunder and as modified by any applicable orders of the Commission, except that if this condition is not met by reason of the death, disqualification, or bona-fide resignation of any trustee or director, then the operation of this condition shall be suspended: (a) for a period 45 days if the vacancy or vacancies may be filed by the Board; (b) for a period of 60 days if a vote of shareholders is required to fill the vacancy or vacancies; or (c) for such longer period as the Commission may prescribe by order upon application.

2. The Boards will monitor their respective Funds for the existence of any irreconcilable material conflict between and among the interests of the Contract holders of all separate accounts and of Plan Participants and Plans investing in the Funds, and determine what action, if any, should be taken in response to any such conflicts. An irreconcilable material conflict may arise for a variety of reasons, which may include: (a) an action by any state insurance regulatory authority; (b) a change in applicable federal or state insurance, tax, or securities laws or regulations, or a public ruling, private letter ruling or any similar action by insurance, tax, or securities regulatory authorities; (c) an administrative or judicial decision in any relevant proceeding; (d) the manner in which the investments of the Funds are being managed; (e) a difference in voting instructions given by variable annuity and variable life insurance Contract holders; (f) a decision by a Participating Insurance Company to disregard the voting instructions of Contract holders; and (g) if applicable, a decision by a Plan to disregard the voting instructions of Plan Participants.

3. The Adviser (or any other investment adviser of a Fund), any Participating Insurance Company and any Plan that executes a fund participation agreement upon becoming an owner of 10% or more of the issued and outstanding shares of a Fund (such Plans referred to hereafter as "Participating Plans") will be required to report any potential or existing conflicts to the Board of the relevant Fund. The Adviser (or any other investment adviser of a Fund), Participating Insurance Companies and Participating Plans will be responsible for assisting the appropriate Board in carrying out its responsibilities under these conditions by providing the Board with all information reasonably necessary for the Board to consider any issues raised. This includes, but is not limited to, an obligation by a Participating Insurance Company to inform the Board whenever it has determined to disregard Contract holder voting instructions and, if pass-through voting is applicable, an obligation by a

Participating Plan to inform the Board whenever it has determined to disregard Plan Participant voting instructions. The responsibility to report such information and conflicts to and to assist the Boards will be contractual obligations of all Participating Insurance Companies and Participating Plans investing in the Funds under their agreement governing participation in the Funds, and such agreements shall provide that these responsibilities will be carried out with a view only to the interests of Contract holders and, if applicable, Plan Participants.

4. If a majority of the Board of a Fund, or a majority of the disinterested trustees or directors, determine that an irreconcilable material conflict exists, the relevant Participating Insurance Companies and Participating Plans, at their expense and to the extent reasonably practicable (as determined by a majority of the disinterested trustees or directors), will be required to take whatever steps are necessary to remedy or eliminate the irreconcilable material conflict. Such steps could include: (a) withdrawing the assets allocable to some or all of the separate accounts from the Fund and reinvesting such assets in a different investment medium, which may include another series of the Trust or another Fund; (b) submitting the questions of whether such segregation should be implemented to a vote of all affected Contract holders and, as appropriate, segregating the assets of any appropriate group (i.e., variable annuity or variable life insurance Contract holders of one or more Participating Insurance Companies) that votes in favor of such segregation, or offering to the affected Contract holders the option of making such a change; and (c) establishing a new registered management investment company or managed separate account. If an irreconcilable material conflict arises because of a decision by a Participating Insurance Company to disregard Contract holders voting instructions, and that decision represents a minority position or would preclude a majority vote, the Participating Insurance Company may be required, at the election of the Fund, to withdraw its separate account's investment in such Fund, with no charge or penalty imposed as a result of such withdrawal. If an irreconcilable material conflict arises because of a Participating Plan's decision to disregard Plan Participant voting instructions, if applicable, and that decision represents a minority position or would preclude a majority vote, the Participating Plan may be required, at the election of the Fund, to withdraw its investment in such Fund, with no charge or penalty imposed as a result of such withdrawal. To the extent permitted by applicable law, the responsibility of taking remedial action in the event of a Board determination of an irreconcilable material conflict and bearing the cost of such remedial action shall be a contractual obligation of all Participating Insurance Companies and Participating Plans under their agreements governing participation in the Funds, and these responsibilities will be carried out with a view only to the interests of Contract holders and Plan Participants, as applicable.

5. For purposes of Condition Four, a majority of the disinterested members of the applicable Board will determine whether or not any proposed action adequately remedies any irreconcilable material conflict, but in no event will a Fund or the Adviser (or any other investment adviser of the Funds) be required to reestablish a new funding medium for any Contract. No Participating Insurance Company shall be required by Condition Four to set zero copy attached received instructions. Each Participating Plan will vote as required by applicable law and governing plan documents.

8. All reports of potential or existing conflicts received by a Board, and all Board action will regard to determining the existence of a conflict, notifying the Adviser, Participating Insurance Companies and Participating Plans of a conflict, and determining whether any proposed action adequately remedies a conflict, will be properly recorded in the minutes of the appropriate Board or other appropriate records, and such minutes or other records shall be made available to the Commission upon request.

9. Each Fund will notify all Participating Insurance Companies with respect to such Fund that separate account prospectus disclosure regarding potential risks of mixed and shared funding may be appropriate. Each Fund will disclose in its prospectus that: (a) shares of the Fund may be offered to insurance company separate accounts of both annuity and life insurance variable contracts, and to Plans; (b) due to differences of tax treatment and other considerations, the interests of various Contract owners participating in the Fund and the interests of Plans investing in the Fund may conflict; and (c) the Board will monitor such Fund for any material conflicts of interest and determine what action, if any, should be taken.

10. Each Fund will comply with all provisions of the Act requiring voting by shareholders (which, for these purposes, shall be the person having a voting interest in the shares of the respective Fund), and in particular, each Fund will either provide for annual meetings (except to the extent that the Commission may interpret Section 16 of the Act not to require such meetings) or comply with Section 16(c) of the Act (although the Funds are not within the trusts described in Section 16(c) of the Act), as well as with Section 16(a) and, if applicable, Section 16(b) of the Act. Further, each Fund will act in accordance with the Commission's interpretation of the requirements of Section 16(a) with respect to periodic elections of directors (or trustees) and with whatever rules the Commission may promulgate with respect thereto.

11. If and to the extent that Rules 6e–2 and 6e–3(T) are amended (or Rule 6e–3 under the Act is adopted) to provide exemptive relief from any provision of the Act, or the rules promulgated thereunder with respect to mixed or shared funding on terms and conditions materially different from any exemptions granted in the order requested by Applicants, then the Funds shall and the Participating Insurance Companies, as appropriate, shall be required to take such steps as may be necessary to comply with Rules 6e–2 and 6e–3(T), as amended, or Rule 6e–3, as adopted, to the extent applicable.

12. No less than annually, the Adviser (or any other investment adviser of a Fund), the Participating Insurance Companies and Participating Plans shall submit to the Boards such reports, materials, or data as such Boards may reasonably request so that the Boards may fully carry out the obligations imposed upon them by the conditions contained in the application. Such reports, materials, and data shall be submitted more frequently if deemed appropriate by the applicable Boards. The obligations of the Adviser, Participating Insurance Companies and Participating Plans to provide these reports, materials and data to the Boards, shall be a contractual obligation of the Adviser, all Participating Insurance Companies and Participating Plans under the agreements governing their participation in the Funds.

13. If a Plan or Plan Participant shareholder should become an owner of 10% or more of the issued and outstanding shares of a Fund, such Plan will execute a participation agreement with such Fund including the conditions set forth in the application to the extent applicable. A Plan or Plan Participant shareholder will execute an application containing an acknowledgment of this condition at the

time of its initial purchase of shares of the Fund.

Conclusion

For the reasons set forth above, Applicants represent that the exemptions requested are necessary and appropriate in the public interest and consistent with the protection of investors and purposes fairly intended by the policy and provisions of the Act.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

(Release No. 34–39996; File No. SR–AMEX–97–30)

Self-Regulatory Organizations; Order Approving Proposed Rule Change by the American Stock Exchange, Inc. Relating to Professional Hearing Officers, Executive Committee Review of Appeals From Disciplinary Panel Decisions and Indemnification of Persons Serving on Disciplinary Panels and Exchange Officials

May 18, 1998.

I. Introduction

On August 11, 1997, the American Stock Exchange, Inc. ("Amex" or "Exchange") submitted to the Securities and Exchange Commission ("SEC" or "Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("ACT") [1] and Rule 19b–4 thereunder,[2] a proposed rule change which amends the Exchange's Constitution and Rules of Procedure applicable to its disciplinary proceedings. A notice of the proposed rule change appeared in the **Federal Register** on March 24, 1998.[3] The Commission received no comment letters concerning this rule change. This order approves the proposed rule change.

The Exchange's Constitution and Rules of Procedure applicable to disciplinary proceedings currently require, among other things, the Exchange to draw members of disciplinary panels exclusively from the ranks of practicing securities industry professionals. These rules also generally require the Chairmen of Disciplinary Panels to be Exchange Officials. The Exchange believes the current system for selecting Disciplinary Panels has worked well for many years, and Panel members have performed an invaluable service to the Exchange on a voluntary basis. Recently, the Exchange has noticed that the complexity of the legal issues confronting its disciplinary panels has increased, thus requiring Article V, Section 1(b) of the Exchange's Constitution and its Rules of Procedure to be modified.

II. Description of the Proposal

i. Professional Hearing Officers

Frequently, Disciplinary Panels face complicated legal questions that must be resolved promptly to ensure the timely resolution of enforcement matters. While the Exchange provides the Panels with an assistant, this staff person has a non-substantive role in enforcement proceedings and, therefore, is unable to fully participate in evaluating important legal, evidentiary and procedural questions. Accordingly, the Exchange has amended its Constitution and Rules to provide for professional hearing officers to serve as chairmen and voting members of Exchange Disciplinary Panels.[4] The remaining members of Disciplinary Panels would continue to be drawn from the ranks of practicing securities industry professionals as currently provided for in the Exchange's Constitution and Rules.[5]

ii. Indemnification of Persons Serving on Disciplinary Panels and Exchange Officials

The indemnification provision of the Exchange's Constitution had not specifically mentioned persons serving on Disciplinary Panels nor Exchange Officials. Although the Exchange believes there are sound arguments for concluding that persons serving on Disciplinary Panels and Exchange Officials already are covered by the Exchange's indemnity provision, the Exchange has, nevertheless, amended the Constitution to make this coverage explicit to help ensure that the Exchange can continue to attract and retain qualified persons to serve in these capacities.[6]

iii. Board Review of Disciplinary Panel Decisions

Prior to this proposal, in all instances, disciplinary appeals were heard by the Executive Committee of the Board pursuant to delegated authority from the Board of Governors as authorized by Article V, Section 1(b) of the Constitution except where a member or member organization is expelled or suspended for a period of one year or more. In such instance, a review by the full Board would have been required. However, the Exchange has amended its Constitution to vest in the Executive Committee the delegated authority to hear *all* appeals (including matters the Board calls for review) regardless of the nature of the respondent or the penalty.[7] This should make the appeal process less cumbersome, while at the same time eliminating a special review privilege (*i.e.*, full Board review) that existed for members and member organizations, but not for their employees. The full Board would retain authority to review disciplinary decisions when such review is deemed appropriate.

III. Discussion

The Commission believes that the proposed rule change is consistent with the Act [8] and the rules and regulations promulgated thereunder. Specifically, the Commission believes that approval of the proposed rule change is

---

[2] 17 CFR 240.19b–4 (1995).

[3] Securities Exchange Act Release No. 39767 (March 17, 1998), 63 FR 1414 (March 24, 1998).

[4] The Amex expects that the "professional hearing officer will be an individual who is a lawyer who has had litigation experience in the securities area. It is possible that such individual, or his firm, may provide advice or services to the Exchange on matters that do not relate to the investigation or preparation of disciplinary matters." *See* letter from Janice M. Stroughter, Director of Hearings and Special Counsel, Legal & Regulatory Policy, American Stock Exchange, Inc., to Katherine England, Esq., Assistant Director, Market Supervision, SEC, dated February 25, 1998 ("Amendment No. 2").

[5] *CR.* CBOE Rule 2.1 (establishing committees, procedures and duties and powers thereof); NYSE rule 476(b) (outlining the composition of a Hearing Board, the selection pool from which panelists are chosen and length of service); and PCX Rule 11 (procedures for establishing committees in general, membership selection, and delegation of jurisdiction to specific committees).

[6] *Cf.* CBOE Const. art. IX, NYSE Const. art. XII, and PCX Const. art. XVI. According to these provisions, indemnification is granted to members of any committees authorized by their respective Constitutions or Boards.

[7] *Cf.* CBOE Rule 17.10 (review shall be conducted by the Board or a committee of the Board); NYSE Rule 476(f) (review of Hearing Panel's decision conducted by the Board); and PCX Rule 10.8(a) (review may either be conducted by the Board or by a committee appointed by Board).

[8] Pursuant to Section 3(f) of the Act, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. In updating its rules to improve its disciplinary process, the Exchange has enhanced efficiency by streamlining a process that should enable the Exchange to expeditiously resolve disciplinary actions. Competition should also improve as members and customers become confident that wrongdoing will be quickly and effectively addressed. If competition increases then capital formation should improve as an increase in business should result in increased profits. 15 U.S.C. 78c(f).

consistent with Section 6(b)(7)[9] of the Act. The proposed rule change provides fair procedures for disciplining its members and associated persons by changing the composition of Disciplinary Panels to allow professional hearing officers to serve as chairmen and voting members on these panels. Providing more responsibility and authority to these professional hearing officers lends credibility to the disciplinary process because all parties involved in the dispute will benefit from their expertise and knowledge of the law as it applies to the securities industry. This expertise and knowledge should result in speedier Panel decisions without sacrificing due process.

The Commission notes, however, that the Exchange's rules do not specifically address the possibility of conflicts of interest between the panelist and parties in the dispute.[10] In response, the Exchange states that its Hearings Department screens panel members for conflicts of interest.[11] Initially, prospective panel members are chosen who do not present apparent conflicts. These prospective panelists are then given the names of the parties, names of lawyers or agents representing the parties, names of any potential witnesses disclosed by the parties, and the nature of the case. Prospective panelists are then asked whether they have any past or present relationships with any of the persons mentioned and whether they are aware of any other conflict presented by any of the persons mentioned or by the nature of the case. The Exchange also forwards the names of prospective panelists to the parties so that the parties can conduct their own conflicts check. In the Commission's view, this procedure should go on a long way in removing any interested persons from the list of prospective panelists before the panel is selected, thereby minimizing the possibility of conflicts.

The Commission agrees that extending the right of indemnification to persons serving on Disciplinary Panels and to Exchange Officials should allow the Exchange to attract and retain qualified persons to serve in these capacities. By eliminating the possibility of litigation and potential judgment as factors in deciding whether to participate on a Panel, the pool of qualified candidates should increase and their decisions will be based on impartial analysis of the evidence and circumstances, not fear of reprisal. Finally, the Commission supports the Exchange vesting in the Executive Committee the authority to hear all appeals. Streamlining the appeals process should result in expedited enforcement action where necessary, which will, in turn, benefit the public.

[9] Section 6(b)(7) requires the Commission to determine that a registered national securities exchange's rules are designed to provide a fair procedure for the disciplining of members and persons associated with members.

[10] *Cf.* CBOE Rule 2.1(c) (no member shall participate in adjudication of a matter in which he is personally interested) and PCX Rule 10.8(b) (review board member required to disclose any circumstances that might preclude him from rendering an objective and impartial determination) and Rule 11.3 (no committee member shall participate in an adjudication of a matter in which he is personally interested).

[11] *See supra* note 4, Amendment No. 2 at p.2.

IV. Conclusion

For the above reasons, the Commission believes that the proposed rule change is consistent with the provisions of the Act, and in particular with Section 6(b)(7).

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[12] that the proposed rule change (SR–AMEX–97–30) be, and hereby is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[13]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–39998; File No. SR–CHX–98–06]

Self-Regulatory Organizations; Order Approving Proposed Rule Change and Notice of Filing and Order Granting Accelerated Approval to Amendment Nos. 2 and 3 to the Proposed Rule Change by the Chicago Stock Exchange, Inc. Relating to Registration Requirements

May 18, 1998.

I. Introduction

On February 18, 1998, the Chicago Stock Exchange, Inc. ("CHX" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] and Rule 19b–4 thereunder,[2] a proposal to amend its rules to clarify the persons required to register with the CHX. On March 18, 1998, the CHX filed Amendment No. 1 to the proposal.[3] The proposed rule change and Amendment No. 1 were published for comment in the **Federal Register** on April 1, 1998.[4] On May 7, 1998, the CHX filed Amendment No. 2 to the proposal.[5] On May 15, 1998, the CHX filed Amendment No. 3 to the proposal.[6] No comments were received regarding the proposal. This order approves the proposed rule change, as amended.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Description of the Proposal

CHX Article VI, "Restriction and Requirements," Rule 2, "Registration and Approval of Member and Member Organization Personnel," governs the registration and approval of member and member organization personnel and other associated persons. The CHX proposes to replace the current text to CHX Article VI, Rule 2 with new text in order to clarify those persons who are required to register with the Exchange. Specifically, new CHX Article VI, Rule 2(a), "Registration," will require all registered persons, as defined in CHX Article VI, Rule 2(b), to register with the CHX.[7] The CHX may waive the registration requirement or permit a short-form registration or notification for an individual who is properly registered with another self-regulatory organization ("SRO").

New CHX Article VI, Rule 2(b), "Definition of Registered Persons," defines "registered persons" as all members and persons associated with a member or member organization who are engaged or will be engaged in the securities business of a member or

[3] *See* Letter from Patricia L. Levy, Senior Vice President and General Counsel, CHX, to Katherine A. England, Division of Market Regulation ("Division"), Commission, dated March 17, 1998 ("Amendment No. 1"). Amendment No. 1 revises CHX Article VI, Rule 2(a) to state that registered persons, as defined in CHX Article VI, Rule 2(b), must register with the CHX.

[4] *See* Securities Exchange Act Release No. 39804 (March 25, 1998), 63 FR 15906.

[5] *See* Letter from Patricia L. Levy, Senior Vice President and General Counsel, CHX, to Yvonne Fraticelli, Attorney, Division, Commission, dated May 6, 1998 ("Amendment No. 2"). Amendment No. 2 revises CHX Article VI, Rule 2(b) to include members in the CHX's definition of registered persons.

[6] *See* Letter from Patricia L. Levy, Senior Vice President and General Counsel, CHX, to Yvonne Fraticelli, Division, Commission, dated May 15, 1998 ("Amendment No. 3"). Amendment No. 3 revises Interpretation and Policy .01 to CHX Article VI, Rule 2, to indicate that amendments to Form U–4 and Form BD regarding any registered person must be filed within 30 days after the registered person learns the facts or circumstances requiring the forms to be revised or, if the revision involves a statutory disqualification, as defined in the Act, within 10 days after the statutory disqualification occurs. The CHX's original proposal did not include the 10-day limit for the filing of amendments involving a statutory disqualification.

member organization, or the management of such securities business, including those persons whose functions include supervision, solicitation, conduct or business and the training of other persons associated with the member or member organization for any of these functions. CHX Article VI, Rule 2(b) also enumerates, without limitation, specific persons who are within the definition of registered persons, including: (i) Sole proprietors; (ii) officers; (iii) partners; (iv) principal stockholders (as defined in CHX Article II, Rule 4); (v) directors; (vi) branch office managers; (vii) nominees; (viii) representatives (including any persons performing the duties customarily performed by a salesperson or registered representative); (ix) persons whose functions include (a) underwriting, trading or sales of securities; (b) research or investment advice, other than general economic information or advice, with respect to the activities described in the preceding clause (a); and (c) activities other than those specifically mentioned that involve communication, directly or indirectly, with public investors in securities in connection with the activities described in the preceding clauses (a) and (b); and (x) persons listed on Schedule A, B, or C of the member's or member organization's Form BD.[8]

With regard to independent contractors associated with members and member organizations, the CHX notes that it has been the long-standing policy of the Commission to characterize and treat independent contractors whose actions are controlled by a member or member organization as employees for purposes of the Act.[9] This characterization and treatment applies irrespective of whether such persons might be deemed employees in an unrelated statutory context (*e.g.*, for purposes of IRS regulations). Accordingly, an independent contractor, as well as any other person associated with a member or member organization, must register with the CHX if he or she falls within the definition of registered person.

New CHX Article VI, Rule 2(c), "Persons Exempt from Registration," exempts from registration persons associated with a member or member organization (i) whose functions are solely and exclusively ministerial; or (ii) who are not actively engaged in the securities business.[10]

The sole new provision in CHX Article VI, Rule 2(d), "Other Registration Requirements," prohibits members from making application for the registration of any associated person where there is no intent to employ such person in the member's securities business.[11] The CHX's proposal also amends Interpretation and Policy .01 to CHX Article VI, Rule 2 to state that amendments to Form U–4 and Form BD regarding any registered person must be filed within 30 days after the registered person learns the facts or circumstances requiring the forms to be amended or, if the amendment involves a statutory disqualification, as defined in the Act, within 10 days after the statutory disqualification occurs.[12]

III. Discussion

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of Section 6(b)(5)[13] in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and to protect investors and the public interest.[14] In addition, the Commission finds that the proposal is consistent with Section 6(c)(3)(B)[15] of the Act, which allows a national securities exchange to require that any person associated with a member, or any class of such persons, register with the exchange in accordance with procedures established by the rules of the exchange.

New CHX Artidle VI, Rule 2(a) will require all registered persons, as defined in CHX Article VI, Rule 2(b), to register with CHX.[16] New CHX Article VI, Rule 2(b) generally defines registered persons as members and persons associated with a member who are engaged or will be engaged in the securities business of a member, or in the management of such business, including the functions of supervision, solicitation, conduct of business or the training of associated persons for any of these functions. New CHX Article VI, Rule 2(b) also enumerates, without limitation, specific persons who are within the definition of registered person. In addition to the persons required to register under the CHS's current rule, new CHX Article VI, Rule 2(b) also will require that the following persons register with the CHX: sole proprietors; principal stockholders (as defined in CHX Article III, Rule 4); persons listed on Schedules A, B, or C of a member's Form BD;[17] and persons engaged on behalf of a member in underwriting, trading, or sales of securities, research or investment advice, or other activities involving communication with the public in connection with underwriting, trading, sales of securities, or research or investment advice.

The Commission believes that new CHX Article VI, Rules 2(a) and 2(b) will clarify the persons who are required to register with the Exchange, thereby facilitating compliance with the CHX's registration requirements and helping to ensure that all persons who are or will be engaged in a member's securities business are registered with the CHX. Because register persons and persons seeking to register are subject to the

---

[8] Schedule A of Form BD requests information concerning direct owners and executive officers; Schedule B requests information concerning indirect owners; and Schedule C is used to amend Schedules A and B.

[9] *See* Letter from Douglas Scarff, Director, Division, Commission, to Gordon S. Macklin, President, National Association of Securities Dealers, Inc., dated June 18, 1982 ("1982 Letter"). In its 1982 Letter, the Division noted that the Act requires that a person selling securities be registered with the Commission as a broker-dealer under Section 15(a) unless he or she is an associated person as defined in Section 3(a)(18) of the Act. With regard to securities salespersons designated as independent contractors, the Division stated that unless an independent contractor's activities are subject to control by a broker-dealer within the scope of Section 3(a)(18) of the Act, the salesperson must be registered individually as a broker-dealer. The Division noted that an independent contractor salesperson whose activities are subject to control by a broker-dealer must be registered with an SRO and should be covered by the employer broker-dealer's fidelity bond. Finally, the Division stated that a firm is responsible for ensuring either that an independent contractor is registered as a broker-dealer or assuming the supervisory responsibilities attendant to a relationship with an associated person.

[10] Persons in this category may include, for example, senior officers in a division of a broker-dealer that does not participate in the member's securities business. Telephone conversation between Patricia L. Levy, Senior Vice President and General Counsel, CHX, and Yvonne Fraticelli, Attorney, Division, Commission, on March 13, 1998 ("March 13 Conversation").

[11] The current version of CHX Article VI, Rule 2 contains the other requirements listed in new CHX Article VI, Rule 2(d). In general, these provisions include the requirements that members: (1) terminate their relationship with an associated person for whom the CHX has withdrawn or withheld registration or approval; (2) obtain CHX approval before allowing a person subject to a statutory disqualification to become associated with the member; (3) take reasonable care to determine the existence of a statutory disqualification prior to employing an associated person; and (4) promptly notify the CHX if an associated person becomes subject to a statutory disqualification.

[12] *See* Amendment No. 3, *supra* note 6.

[13] 15 U.S.C. 78f(b)(5)(1998).

[14] In approving this rule, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

[15] 15 U.S.C. 78f(c)(3)(B).

[16] However, the CHX may waive the registration requirement or permit a short-form registration or notification for an individual who is properly registered with another SRO.

[17] *See* note 8, *supra*.

CHX's jurisdiction,[18] the proposal also will facilitate the CHX's oversight of such persons by ensuring that the CHX has the authority to enforce its rules and the federal securities laws against such persons.

The CHX's proposal also protests investors and the public interest by noting that a person characterized as an independent contractor must register with the CHX if he or she falls within the definition of registered person. This position is consistent with the 1982 Letter,[19] which stated, among other things, that an independent contractor salesperson whose activities are subject to control by a broker-dealer must be registered with a SRO. By providing a clear statement of the CHX's policy regarding the registration of independent contractors, the CHX's proposal should help to ensure that independent contractors who come within the CHX's definition of registered person register with the CHX.

CHX Article VI, Rule 2(c), "Person Exempt from Registration," provides exemptions from registration for associated persons who functions are solely and exclusively clerical or ministerial or who are not actively engaged in the securities business.[20] The Commission notes that the rules of the National Association of Securities Dealers, Inc. ("NASD") also provide these exemptions from registration.[21] Accordingly, the Commission believes that these exemptions from registration are reasonable and raise no new regulatory issues.

New CHX Article VI, Rule 2(d), "Other Registration Requirements," prohibits members from making application for the registration of any associated person when there is no intent to employ such person in the member's securities business. NASD Rule 1031(a) also contains this prohibition. Accordingly, the Commission believes that this provision of the CHX's proposal is reasonable and raises no new regulatory issues.

The Commission believes that it is reasonable for the CHX to amend Interpretation and Policy .01 to indicate that amendments to Forms U–4 and BDA regarding any registered person must be submitted to the CHX within 30 days after the registered person learns the facts or circumstances requiring the forms to be revised, or, if the amendment involves a statutory disqualification, as defined in the Act, within 10 days after the disqualification occurs.[22] The Commission notes that the rules of the NASD contain a similar provision.[23] Accordingly, the Commission believes that the CHX's amendment to Interpretation and Policy .01 is reasonable and raises no new regulatory issues.

The Commission finds good cause for approving Amendment Nos. 2 and 3 to the proposal prior to the thirtieth day after the date of publication of notice of filing thereof in the **Federal Register**. Amendment No. 2 clarifies new CHX Article VI, Rule 2(b) by indicating that members, as well as associated persons, are registered persons under CHX Article VI, Rule 2(b). This change reflects the inclusion of sole proprietors within CHX Article VI, Rule 1(b)'s enumerated list of registered persons and eliminates an inconsistency that would arise if the CHX defined registered persons to include only persons associated with members and member organizations. Amendment No. 3 strengthens the CHX's proposal by requiring the filing of amendments to Forms U–4 and BD that involve a statutory disqualification within 10 days after the statutory disqualification occurs. Accordingly, the Commission believes that it is consistent with Sections 6 and 19(b) of the Act to approve Amendment Nos. 2 and 3 on an accelerated basis.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning Amendment Nos. 2 and 3, including whether Amendment Nos. 2 and 3 are consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, N.W., Washington, D.C. 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any persons, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the CHX. All submissions should refer to file number SR–CHX–98–06 and should be submitted by June 16, 1998.

V. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[24] that the proposed rule change (SR–CHX–98–06) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[25]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–40001; File No. SR–NASD–97–95]

Self-Regulatory Organizations; Order Granting Approval of Proposed Rule Change By the National Association of Securities Dealers, Inc. Relating to Amendments to the Free-Riding and Withholding Interpretation

May 18, 1998.

I. Introduction

On December 23, 1997,[1] the National Association of Securities Dealers Regulation, Inc. ("NASD Regulation") filed with the Securities and Exchange Commission ("SEC" or "Commission") a proposed rule change pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[2] and Rule 194–b thereunder.[3] Notice of the proposal appeared in the **Federal Register** on February 11, 1998.[4] The Commission received one comment letter regarding the proposal.[5] The

[1] On March 12, 1998, NASD Regulation filed Amendment No. 1 to the proposal. Amendment No. 1 revised Paragraph (b)(9)(A)(ii) to include the shares of a member's parent that are publicly traded on an exchange or Nasdaq in the exemption granted for shares of members traded on an exchange or Nasdaq. Section III of this approval order contains a further discussion of this amendment. In brief, the technical amendment was necessary to reflect the fact that members are often part of a holding company structure wherein the parent of the member is the entity that actually trades on an exchange or Nasdaq. Amendment No. 1 also corrected a drafting error in the original proposal's Paragraph (d) of IM–2110–1 to clarify that both employees and directors may take advantage of an exemption for issuer directed securities programs. Because this amendment is technical the statute does not require that it be published for comment.

VOL 63 ISS 100 MY 26 1998 UMI

commenter generally supported the proposed rule change with some modifications.[6]

The proposal amends Interpretative Material IM–2110–1 and Rule 2720 to revise certain aspects of the Free-Riding and Withholding Interpretation ("Interpretation"). The purpose of the Interpretation is to protect the integrity of the public offering system by ensuring that members make a bona fide public distribution of "hot issue" securities and do not withhold such securities for their own benefit or use the securities to reward other persons who are in a position to direct future business to the member. Hot issues are defined by the Interpretation as securities of a public offering that trade at a premium in the secondary market whenever such trading commences.

The Interpretation prohibits members from retaining the securities of hot issues in their own accounts and prohibits members from allocating such securities to directors, officers, employees and associated persons of such members and other broker-dealers. It also restricts member sales of hot issue securities to the accounts of specified categories of persons, including, among others, senior officers of banks, insurance companies, registered investment companies, registered investment advisory firms and any other person with such organizations whose activities influence or include the buying and selling of securities. These basic prohibitions and restrictions are also made applicable to sales by members of hot issue securities to accounts in which any such persons may have a beneficial interest and, with some exceptions, to members of the immediate family of those persons restricted by the Interpretation.

In March 1997, the NASD Regulation Board of Directors ("Board"), acting upon recommendation from the National Business Conduct Committee ("NBCC")[7] considered various amendments to the Interpretation. The Board submitted a series of proposed rule amendments to the membership for comment in Notice to Members 97–30.

[6] On April 9, 1998, NASD Regulation filed Amendment No. 2 to the proposal. *See* letter to Katherine A. England, Assistant Director, Division of Market Regulation. Amendment No. 2 responds to the comment letter submitted by Sullivan and Cromwell regarding the proposed rule change. NASD Regulation's response to the comment letter is discussed in detail in Section III of this approval order. Because this amendment is technical the statute does not require that it be published for comment.

[7] The name of this committee has been changed to National Adjudicatory Council. *See* Securities Exchange Act Release No. 39470 (December 19, 1997), 62 FR 67927 (December 30, 1997).

NASD Regulation received 22 comment letters in response to Notice to Members 97–30. As described below, the proposal has been amended in response to these comments.

II. Summary Description of the Proposed Rule Change

A. Exemptive Authority

Previously, there has not been a provision in the Interpretation itself to allow the NBCC, the Board, or NASD Regulation staff to grant exemptive relief. In the past, the NBCC, relying on the NASD By-Law's grant of authority to the Board and its Committees, granted exemptions in certain unique circumstances. NASD Rule 9600 delegates exemptive authority in the Interpretation to the Office of General Counsel. The Interpretation previously provided for exemption relief solely in cases involving sales of issuer-directed securities to non-employee-director restricted persons pursuant to Paragraph (d)(2) of the Interpretation.

As revised, the Interpretation authorizes NASD Regulation staff, upon written request and taking into consideration all relevant factors, to provide an exemption either unconditionally or on specified terms from any or all of the provisions of the Interpretation, consistent with the purposes of the Interpretation, the protection of investors and the public interest. The proposed rule revisions also provide that persons may appeal decisions of NASD Regulation staff to the National Adjudicatory Council.

B. Treatment of Direct and Indirect Owner of Broker-Dealers

In 1994, the Interpretation's definition of "associated person" was amended to exempt certain passive investors in broker-dealers.[8] Among other things, the rule amendments approved in the instant filing address two limitations from the previous amendments. First, the definition of associated person as previously provided in the Interpretation did not include non-natural persons that have an ownership interest in or have contributed capital to a broker-dealer. Secondly, the Interpretation did not affirmatively specify any ownership levels at which a natural person becomes an associated person by reason of his or her ownership interest in a broker-dealer. Rather, the Interpretation only specified when a natural person is not an associated person.

[8] Securities Exchange Act Release No. 35059 (December 7, 1994), 59 FR 64455, 64457 (December 14, 1994).

In Notice to Members 97–30, NASD Regulation proposed creating a new definition of "restricted person." Among other things, commenters advised the NASD that this approach would result in confusion because the term "restricted person" was already used throughout the Interpretation. Commenters also observed that when the proposed restricted persons provisions were read with other sections of the Interpretation, the Interpretation would appear to be so broad as to preclude purchases by any entity that owns 10 percent or more of a broker-dealer or any account in which such entity has a beneficial interest.

Having considered the potential problems with creating a new definition of "restricted person," to clarify the application of the Interpretation to natural and non-natural persons, the Interpretation has been revised by NASD Regulation to create a new Paragraph (b)(9) of IM 2110–1. Paragraph (b)(9)(A) would exempt from the Interpretation's prohibitions purchases by any person who directly or indirectly owns any class of equity securities of, or who has made a contribution of capital to, a member, and whose ownership or capital interest is passive and is less than 10 percent of the equity or capital of a member, as long as such person purchases hot issues from a person other than the member in which it has such passive ownership and such person is not in a position by virtue of its passive ownership interest to direct the allocation of hot issues.

Alternatively, a second exemption embodied in Paragraph (b)(9)(A) would exclude purchases by any person who directly or indirectly owns any class of equity securities of, or who has made a contribution of capital to, a member, and whose ownership or capital interest is passive and is less than 10 percent of the equity or capital of a member, as long as such member's shares, or shares of a parent of such member, are traded on an exchange or Nasdaq.

In response to commenters' concerns that the rule revisions proposed in Notice to Members 97–30 would prohibit sales of hot issues to all entities within many insurance companies that own a broker-dealer, Paragraph (b)(9)(B) of the proposal exempts sales of hot issues to any account established for the benefit of bona fide public customers of a person restricted pursuant to Paragraph (b)(9). This exception expressly notes that such accounts would include, but are not limited to, an insurance company's general or separate accounts.

Finally, Paragraph (b)(9)(C) retains the indirect ownership provisions originally proposed in Notice to Members 97–30. Specifically, it provides that any person with an equity ownership or capital interest in an entity that maintains an investment in a member shall be deemed to have a percentage interest of the entity of the member multiplied by the percentage interest of such person in such entity.

C. Exception to the Public Offering Definition

Heretofore, debt offerings have been included in the Interpretation's definition of "public offering." The proposed rule change would provide an exception from the Interpretation for debt securities other than debt securities convertible into common or preferred stock. This exclusion is based upon the rationale that such offerings do not raise the same issues as equity offerings inasmuch as the price for a particular debt security generally fluctuates based on interest rate movements rather than demand factors. The definition of public offering also would except financing instrument-backed securities that are rated by a nationally recognized statistical rating organization in one of the four highest generic rating categories. Lastly, NASD Regulation has reconsidered its earlier position and, in response to comment letters received regarding Notice to Members 97–30, revised the term public offering so as to exclude secondary offerings by an issuer whose securities are actively traded securities. The modified Interpretation defines actively traded securities to include securities that have a worldwide average daily trading volume value of at least $1 million and are issued by an issuer whose common equity securities have a public float value of at least $150 million.

D. Foreign Mutual Funds

Purchases of shares of investment companies registered under the Investment Company Act of 1940 were previously exempt from the Interpretation based upon the rationale that the interest of any one restricted person in an investment company ordinarily is de minimis and because ownership of investment company shares generally is subject to frequent turnover. The proposed rule revisions would extend this rationale to the purchase of shares of foreign investment companies and thus exempt such shares from the Interpretation, subject to verification procedures designed, among other things, to ensure that the company is listed on a foreign exchange or authorized for sale to the policy by a foreign regulatory authority.

E. Issuer-Directed Share Exemption

In Notice to Members 97–30, NASD Regulation stated that persons have requested that the language of Paragraph (d) of the Interpretation be modified to clarify that the exemption is available to employees of the issuer who are materially supported by a restricted person and both employees and non-employee directors. Based upon the comments received and its own initiative to clarify and streamline the issuer-directed securities provisions more generally, the proposed rule change modifies Paragraph (d) of the Interpretation to permit persons associated with a member and their immediate family members to purchase hot issues. The amendments clarify that the exemptions apply to employees and directors of a parent or subsidiary of the issuer, consistent with NASD Regulation's past practice.

F. Accounts for Qualified Plans Under the Employment Retirement Income Security Act ("ERISA")

The Interpretation has not previously expressly addressed the status of qualified employee benefit plans under ERISA. In direct response to the requests of commenters, the proposed rule change clarifies the status of such accounts. To that end, the proposal incorporates within the Interpretation itself a prior NBCC interpretation governing the matter. As a general rule, NASD Regulation believes qualified ERISA plans should not be deemed an "investment partnership or corporation" and should not be considered a "restricted account" for purposes of the Interpretation. The proposed amendments to the Interpretation provide guidance, however, in determining the factual circumstances wherein a qualified ERISA plan could be deemed restricted.

III. Comments Letters Received and Amendment No. 2 to the Proposal

As noted above, the Commission received one comment letter from Sullivan and Cromwell. Amendment No. 2 to the filing responds to the comment letter and, as discussed below, amends the proposal to address issues raised by the Sullivan and Cromwell letter.

A. Investment Grade Securities

The proposed rule change exempts from the Interpretation debt securities (other than debt securities convertible into common or preferred stock) and financing instrument backed-securities that are rated by a nationally recognized statistical rating organization in one of its four highest generic rating categories. Sullivan and Cromwell recommends that NASD Regulation exempt "investment grade preferred securities," (*i.e.*, preferred equities) from the Interpretation based upon its understanding that prices for such securities are principally based on prevailing interest rates and that many investors view investment grade preferred securities of different issuers as being largely fungible.

NASD Regulation does not agree with Sullivan and Cromwell that "investment grade preferred securities" should be excluded from the Interpretation, because NASD Regulation does not believe that the prices of investment grade preferred securities are based on interest rate movements to the same extent as investment grade debt. NASD Regulation believes that demand-side factors play an important role in the price of many preferred securities. In addition, preferred securities generally differ from investment grade debt in that they are rarely collateralized. Moreover, purchasers of preferred securities often look to the issuer's business and management in determining whether to purchase the security. For these reasons, NASD Regulation believes that "investment grade preferred securities" should not be excluded from the Interpretation. Amendment No. 2 to the filing states, however, that NASD Regulation will evaluate the impact of excluding investment grade debt and investment grade financing-backed securities from the Interpretation and will consider in the future whether preferred equities should also be excluded.

B. Paragraph (b)(9) and Direct/Indirect Owners of Broker-Dealers

In Paragraph (b)(9) of the proposed rule change, NASD Regulation prohibits members from selling hot issues to any person or to a member of the immediate family of such person who owns or has contributed capital to a broker-dealer, other than solely a limited business broker-dealer as defined in Paragraph (c) of the Interpretation, or the account in which any such person has a beneficial interest, with certain exceptions for ownership interest of less than 10%. Importantly, however, Paragraph (b)(9) exempts sales to the account of a restricted person that is established for the benefit of bona fide public customers.

The Sullivan & Cromwell letter makes a number of particularized comments, which are discussed in detail below. The thrust of Sullivan & Cromwell

comments is that Paragraph (b)(9) should be revised to apply only to institutions that are "principally engaged in the broker-dealer business." In responding to the suggestion, NASD Regulation notes that it has rejected this argument many times and continues to believe that such a narrow approach is inconsistent with the scope and intent of the Interpretation. As reiterated in Amendment No. 2 to the filing, NASD Regulation is of the opinion that the proposed revisions by Sullivan and Cromwell would leave open a substantial possibility of reciprocal self-dealing among broker-dealer and owners of broker-dealers.

NASD Regulation notes that the Interpretation protects the integrity of the public offering process by ensuring that members make a bona fide public distribution at the public offering price of hot issue securities and do not withhold such securities for their own benefit or use such securities to reward other persons in the financial services business who are in a position to direct future business to the member. NASD Regulation believes the Interpretation also ensures that members of the securities industry do not take advantage of their inside position in the industry to the detriment of public investors. In light of the foregoing rationales, NASD Regulation believes that persons who own a significant percentage of a broker-dealer, *i.e.*, 10% or more, should be restricted under the Interpretation.

NASD Regulation notes that it has provided an exemption from the interpretation for persons that own 10% or more of a broker-dealer by permitting such persons to purchase hot issues for the benefit of bona fide public customers, or for an ERISA account pursuant to Paragraph (f)(3). NASD Regulation does not believe that permitting such persons to purchase hot issues for proprietary accounts, even if such hot issues directly or indirectly benefit some public shareholder, is consistent with the purposes of the Interpretation.

1. Banks and Industrial Companies with Broker-Dealer Subsidiaries and Affiliates

Sullivan and Cromwell states in its letter that it is concerned that the proposed rule change would affect the public offering market by making hot issues unavailable to many institutional customers, and in particular, banks with broker-dealer subsidiaries and affiliates. Sullivan and Cromwell observes that proposed Paragraph (b)(9) generally would prohibit the sale of hot issues to banks with broker-dealer subsidiaries and affiliates. To the extent that these banks purchase hot issues on a proprietary basis, NASD Regulation believes that the Interpretation should apply. NASD Regulation notes, however, that banks with broker-dealer subsidiaries and affiliates may purchase hot issues on behalf of bona fide public customers, pursuant to the exemption set forth in Paragraph (b)(9).

The proposed rule change also would prohibit industrial companies that own broker-dealers, such as General Electric Company ("GE") and Ford Motor Company ("Ford") from purchasing hot issues for their own account. Here again, NASD Regulation believes that this is the correct result. However, companies such as GE and Ford would be able to purchase hot issues for an account in which they have a beneficial interest, provided that such account is established for the benefit of bona fide public customers.

2. Accounts Established for the Benefit of Bona Fide Public Customers

As stated above, Paragraph (b)(a) of the proposed rule change contains an exemption for sales to the account of any person restricted under this subparagraph that is established for the benefit of bona fide public customer. Specifically, Paragraph (b)(9) states that such accounts would include "insurance company general and separate accounts." NASD Regulation included these examples because it understood that investments from such accounts are passed on directly to policy holders, *i.e.*, bona fide public customers.

The Sullivan and Cromwell letter suggests that the exemption for accounts established for the benefit of bona fide public customers applies solely to life insurance companies. As explained by NASD Regulation, it was not intended that the exemption described in Paragraph (b)(9) apply solely to life insurance companies. NASD Regulation intended that the exemption apply across all industries. Accordingly, Paragraph (b)(9)(B) of the proposed rule change has been amended. The revised language is set forth below. Additions to the provision are italicized. Language to be deleted appears in brackets.

This prohibition shall not apply to sales to the account of any person restricted under this paragraph established for the benefit of bona fide public customers, including [an] insurance company general [or] , separate *and investment* accounts *and bank trust accounts.*

3. Shares of a Member Traded as Part of a Holding Company

As originally proposed, Paragraph (b)(9) of the proposed rule change would exempt any person who owns any class of equity securities of, or who has made a contribution of capital to, a member, and whose ownership or capital interest is passive and is less than 10% of the equity or capital of a member, so long as such member's shares are publicly traded on an exchange or Nasdaq. Sullivan & Cromwell states that this exemption does not properly reflect the fact that many of the largest broker-dealers are subsidiaries of publicly traded holding companies and are not themselves publicly traded. NASD Regulation previously addressed this issue in Amendment No. 1 to the filing. Amendment No. 1 revises paragraph (b)(9)(A)(ii) to include within the exemption shares of a parent of a member firm that are publicly traded on an exchange or Nasdaq.

4. Immediate Family Members

Paragraph (b)(9) applies to "any person, or to a member of the immediate family of such person." Sullivan and Cromwell states that Paragraph (b)(9) would require a member, for example Merrill Lynch, to confirm not only that its customer does not own any Merrill Lynch Parent stock, but also that none of his or her immediate family members owns any such stock. Sullivan and Cromwell also states that Paragraph (b)(9) does not exempt immediate family members who are not materially supported by the restricted person, as does Paragraph (b)(2) of the Interpretation. Sullivan and Cromwell maintains that it would be almost impossible for a broker-dealer owned by a publicly traded holding company to comply with Paragraph (b)(9) since, on its face, it would require the broker-dealer to obtain complete information regarding the securities portfolios of each of its customers' immediate family members. Proposed Paragraph (b)(9), however, is implicated only by persons who own 10% or more of a member. Nevertheless, NASD Regulation believes that the provisions regarding the immediate family members of restricted persons under proposed Paragraph (b)(9) should not be more restrictive than the provisions in Paragraph (b)(2), which pertain to associated persons of a member. NASD Regulation has therefore amended Paragraph (b)(9) so as to exclude immediate family members who are not materially supported by restricted persons. Revised

Paragraph (b)(9) is set forth below. New language is italicized.

Sell any of the securities to any person, or to a member of the immediate family of such person *who is supported directly or indirectly to a material extent by such person,* * * *.

5. Miscellaneous Changes to Paragraph (b)(9)

Pursuant to Amendment No. 2, NASD Regulation also corrected an inadvertent clerical error in Paragraph (b)(9)(C) of the proposed rule change that was identified by the Sullivan and Cromwell comment later. The missing language set forth below was contained in the proposed rule change as published in NASD Notice to Members 97–30, but was omitted from the rule filing. New language is italicized. Revised Paragraph (b)(9)(C) has been amended to read as follows:

For purposes of this paragraph, any person with an equity ownership or capital interest in an entity that maintains an investment in a member shall be deemed to have a percentage interest *in the member equal to the percentage interest* of the entity in the member multiplied by the percentage interest of such person in such entity.

C. Foreign Investment Companies

Paragraphs (f) and (1)(6) of the proposed rule change would exempt foreign investment companies *i.e.*, foreign mutual funds, organized under the laws of the foreign jurisdiction, that have provided to the member a written certification prepared by counsel or an independent certified public accountant, which states that: (1) The fund has 100 or more investors; (2) the fund is listed on a foreign exchange or authorized for sale to the public by a foreign regulatory authority, (3) no more than 5% of the fund assets are to be invested in the hot issue securities being offered, and (4) any person owning more than 5% of the shares of the fund is not a restricted person.

Sullivan and Cromwell states that while it agrees that an exemption should be provided for foreign investment companies, it opposes any requirement that NASD members obtain written certification from an attorney or accountant. Sullivan and Cromwell proposes instead that NASD Regulation exempt foreign investment companies based upon their "status" under foreign regulatory regimes, for example, any fund qualified for sale under the European Union's Directive on Undertakings for Collective Investment in Transferable Securities.

In response to comments received regarding Notice to Members 97–30, and to alleviate the burdens associated with the written certification requirement, NASD Regulation modified proposed Paragraph (1)(6) to permit foreign, and not just U.S., attorneys and accountants to provide written certifications. NASD Regulation continues to believe, however, that written certifications are an appropriate method of determining whether a particular foreign investment company meets the criteria for exemption from the Interpretation and does not agree that this requirement should be eliminated.

Sullivan and Cromwell states in its comment letter that if written certifications are to be required, it recommends two changes. First Sullivan and Cromwell states that foreign investment companies, like registered investment companies, do not investigate the status of their shareholders and thus will be unable to comply with the requirement to certify that "any person owning more than 5% of the shares of the fund is not a person described in Paragraphs (b)(1), (2), (3), or (4) of the Rule."

NASD Regulation considered this issue in proposing the exemption for foreign investment companies but concluded that the concerns of the Interpretation that restricted persons do not indirectly purchase hot issues through foreign investment companies were paramount. Accordingly, if a foreign investment company is owned more than 5% by a person, an attorney or accountant must certify that such person is not a restricted person under the Interpretation. The attorney or accountant providing the written certification required pursuant to paragraph (1)(6) may rely upon information supplied by the foreign investment company and any shareholder that owns more than 5% of the foreign investment company. NASD Regulation is of the opinion that the shareholder is likely to cooperate with any request by the foreign investment company, or its counsel or accountant, regarding the shareholder's status under the Interpretation since the shareholder's cooperation may enhance the foreign investment company's investment opportunities by permitting it to invest in hot issues. As a practical matter, however, the requirement to determine whether a more than 5% shareholder is a restricted person is unlikely to affect many foreign investment companies because, as Sullivan and Cromwell concedes in its comment letter, each foreign investment company must have at least 100 shareholders and, consequently, it is unlikely that the interest of any one person will exceed the 5% threshold.

Second, Sullivan and Cromwell states that, as drafted, Paragraph (1)(6) of the Interpretation would require a member firm to obtain a written certification prior to each hot issue sale to a foreign investment company. Sullivan and Cromwell views this as unduly burdensome and recommends that NASD Regulation revise Paragraph (1)(6) to be consistent with Paragraph (f)(2), which states that "a written representation shall be deemed to be current if it is based upon the status of the account as of a date more than 18 months prior to the date of the transaction." NASD Regulation agrees that members should not be required to obtain a written certification before each transaction and will adopt the same standard in effect for certifications made pursuant to Paragraph (f)(2). Accordingly, the final sentence of Paragraph (f)(2) of the Interpretation shall be amended as set forth below. New language is italicized.

For purposes of this paragraph (f) *and the certification required pursuant to paragraph (1)(6),* a list or written representation shall be deemed to be current if it is based upon the status of the account as of a date not more than 18 months prior to the date of the transaction.

In addition to responding to the Sullivan and Cromwell observations, Amendment No. 2 corrected proposed Paragraph (1)(6)(D) to make the paragraph clearer and more consistent with other parts of the Interpretation. The revised paragraph is set forth below. New language is italicized. Language to be deleted from the paragraph appears in brackets.

Any person owning more than 5% of the share of *the* fund is not a *restricted* person *as* described in paragraph (b)(1), (2), (3), [or] (4) *or (9)* of the [Rule] *interpretation.*

D. Secondary Distributions

The proposed rule change exempts from the Interpretation secondary distributions by an issuer whose securities are actively-traded securities. Sullivan and Cromwell supports the decision to exempt secondary offerings but objects to the provision in the definition of "actively-traded securities" that excludes securities issued by the distribution participant or an affiliate of the distribution participant. NASD Regulation's proposed rule change to exempt secondary offerings was drafted to track the exemption for actively-traded securities set forth in the SEC's Regulation M. In adopting the exemption for secondary distributions, NASD Regulation was focusing on the average daily trading value and public float value provisions of Regulation M exempt securities. NASD Regulation agrees with Sullivan and Cromwell concerning secondary offerings of

members or affiliates of members and proposes revising the definition of "actively-traded securities" to extend the exemption to securities issued by a distribution participant or an affiliate of the distribution participant. Paragraph (1)(7)(A), as amended, is set forth below. Language to be deleted from the paragraph appears in brackets.

Actively-traded securities means securities that have an ADTV value of at least $1 million and are issued by an issuer whose common equity securities have a public float value of at least $150 million[; provided, however, that such securities are not issued by the distribution participant or an affiliate of the distribution participant].

Finally, Sullivan Cromwell notes that Paragraph (l)(1) refers to secondary distributions "by an issuer." Sullivan and Cromwell asks whether secondary distributions by an existing security holder are subject to the Interpretation. If not, Sullivan and Cromwell recommends amending the text of proposed Paragraph (l)(1) to extend the exemption to such distributions. NASD Regulation did not intend to exclude from the exemption secondary offerings by security holders. Accordingly, it has revised Paragraph (l)(1) as set forth below. New language is italicized. Language to be deleted from the paragraph appears in brackets.

The term public offering shall exclude secondary distributions by an issuer *or any security holder of the issuer, of* [whose securities are] actively-traded securities.

IV. Conclusion

The Commission has carefully considered the comments set forth in the Sullivan and Cromwell letter. As discussed in detail above, the NASD Regulation has made a number of technical amendments to the proposal in response to the Sullivan and Cromwell letter, which the Commission believes are consistent with the spirit of the Interpretation. Indeed, the Commission believes the changes to the proposal which were made pursuant to Amendment No. 1 and No. 2 will facilitate the ability of NASD member firms to comply with the Interpretation, because the amendments further clarify the intent of the proposed rule change. For example, in response to the Sullivan and Cromwell letter, the Interpretation was amended to clarify that the exemption in paragraph (b)(9)(B) for sales to the accounts of restricted persons established for the benefit of bona fide public customers was intended to apply across all industries, as opposed to life insurance companies exclusively. Similarly, Amendment No. 1 to the proposal facilitates member firm compliance by amending the paragraph (b)(9)(A)(ii) exemption for shares of a member traded on an exchange or Nasdaq to include an exemption for shares of a member traded as a part of a holding company. This amendment fosters member firm compliance with the Interpretation by recognizing that many of the largest broker-dealers are subsidiaries of publicly traded holding companies and are not themselves publicly traded.

NASD Regulation has determined not to revise the proposal in response to Sullivan and Cromwell's suggestion that paragraph (b)(9) of the Interpretation, which with certain exceptions, prohibits sales of hit issue securities to any person who owns or has contributed capital to a broker-dealer, be revised such that it only applies to institutions engaged "principally in the broker-dealer business." The Commission agrees with NASD Regulation that such an amendment is inconsistent with the scope and intent of the proposal, because the modification would leave open a substantial possibility of self-dealing between broker-dealers and owners of broker-dealers. Accordingly, the Commission believes NASD Regulation has a sound investor protection basis for its decision not to narrow the scope of paragraph (b)(9) of the Interpretation as requested by Sullivan and Cromwell.

The Commission believes the proposed rule change, as amended, is consistent with the provisions of section 15(A)(b)(6) of the Act,[9] which provides in pertinent part that the rules of a national securities association be designed to prevent fraudulent and manipulative acts, promote just and equitable principles of trade and protect investors and the public interest. Specifically, the proposal preserves public confidence in the fairness of the investment banking and securities business by ensuring that members of the investment banking community do not unfairly benefit from public offerings by virtue of their positions as insiders, to the detriment of public investors. Preservation of investor confidence in the fairness of the markets is critical to the continued participation of all classes of securities marked participants. The Commission believes, moreover, that the proposed rule change is consistent with section 15A(b)((9) [10] in that it will alleviate certain inequities caused by the Interpretation, which imposed burdens on competition not necessary or appropriate in furtherance of the purposes of the Act.

In approving this proposal, the Commission notes that it is has considered the proposal's impact on efficiency, competition, and capital formation.[11] The Commission believes the proposal will facilitate the capital raising process by removing restrictions and compliance burdens imposed by the Interpretation with respect to certain transactions where application of the Interpretation does not enhance investor protection or the public interest. For example, the proposal excludes from the definition of public offering secondary offerings by an issuer whose securities are actively traded securities. At the same time, the Interpretation continues to apply to those securities allocations that pose a risk of undercutting the Interpretation's objective of ensuring a bona fide distribution of hot issue securities to the public.

It is therefore ordered, pursuant to Section 19(b)(2) [12] of the Act, that the proposed rule change SR–NASD–97–95 be and hereby is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[13]

Margaret H. McFarland,

Deputy Secretary.

SMALL BUSINESS ADMINISTRATION

Notice of Action Subject to Intergovernmental Review Under Executive Order 12372

AGENCY: U.S. Small Business Administration.

ACTION: Notice of Action Subject to Intergovernmental Review Under Executive Order 12372.

SUMMARY: The Small Business Administration (SBA) is notifying the public that it intends to grant the pending applications of 22 existing Small Business Development Centers (SBDCs) for refunding on October 1, 1998, subject to the availability of funds. Four states do not participate in the EO 12372 process, therefore, their addresses are not included. A short description of the SBDC program follows in the supplementary information below.

The SBA is publishing this notice at least 90 days before the expected refunding date. The SBDCs and their mailing addresses are listed below in the addresses section. A copy of this notice also is being furnished to the

respective State single points of contact designated under the Executive Order. Each SBDC application must be consistent with any area-wide small business assistance plan adopted by a State-authorized agency.

DATES: A State single point of contact and other interested State or local entities may submit written comments regarding an SBDC refunding on or before June 25, 1998.

ADDRESSES:

Addresses of Relevant SBDC State Directors

Mr. Robert McKinley, Region Director, Univ. of Texas at San Antonio, 1222 North Main Street, San Antonio, TX 78212, (210) 458-2450

Mr. Dennis Gruell, State Director, University of Connecticut, 2 Bourn Place, U–94, Storrs, CT 06269-5094, (860) 486–4135

Dr. Elizabeth Gatewood, Region Director, University of Houston, 1100 Louisiana, Suite 500, Houston, TX 77002, (713) 752–8444

Ms. Hazel Kroesser Palmer, State Director, West Virginia Development Office, 950 Kanawha Boulevard, East, Charleston, WV 25301, (304) 558–2960

Mr. Clinton Tymes, State Director, University of Delaware, Suite 005—Purnell Hall, Newark, DE 19711, (302) 831–2747

Ms. Janet Holloway, State Director, University of Kentucky, 225 Business & Economics Bldg., Lexington, KY 40506–0034, (606) 257–7668

SUPPLEMENTARY INFORMATION:

Description of the SBDC Program

A partnership exists between SBA and an SBDC. SBDCs offer training, counseling and other business development assistance to small businesses. Each SBDC provides services under a negotiated Cooperative Agreement with SBA, the general management and oversight of SBA, and a state plan initially approved by the Governor. Non-Federal funds must match Federal funds. An SBDC must operate according to law, the Cooperative Agreement, SBA's regulations, the annual Program Announcement, and program guidance.

Program Objectives

The SBDC program uses Federal funds to leverage the resources of states, academic institutions and the private sector to:

(a) Strengthen the small business community;

(b) Increase economic growth;

(c) Assist more small businesses; and

(d) Broaden the delivery system to more small businesses.

SBDC Program Organization

The lead SBDC operates a statewide or regional network of SBDC subcenters. An SBDC must have a full-time Director. SBDCs must use at least 80 percent of the Federal funds to provide services to small businesses. SBDCs use volunteers and other low cost resources as much as possible.

SBDC Services

An SBDC must have a full range of business development and technical assistance services in its area of operations, depending upon local needs, SBA priorities and SBDC program objectives. Services include training and counseling to existing and prospective small business owners in management, marketing, finance, operations, planning, taxes, and any other general or technical area of assistance that supports small business growth.

The SBA district office and the SBDC must agree upon the specific mix of services. They should give particular attention to SBA's priority and special emphasis groups, including veterans, women, exporters, the disabled, and minorities.

SBDC Program Requirements

An SBDC must meet programmatic and financial requirements imposed by statute, regulations or its Cooperative Agreement. The SBDC must:

(a) Locate subcenters so that they are as accessible as possible to small businesses;

(b) Open all subcenters at least 40 hours per week, or during the normal business hours of its state or academic Host Organization, throughout the year;

(c) Develop working relationships with financial institutions, the investment community, professional associations, private consultants and small business groups; and

(d) Maintain lists of private consultants at each subcenter.

Dated: May 18, 1998.

Johnnie L. Albertson,

Associate Administrator, for Small Business Development Centers.

DEPARTMENT OF STATE

[Public Notice #2824]

Advisory Committee on International Law, Notice of Committee Renewal; Notice of Committee Meeting

I. Renewal of Advisory Committee

The Department of State has renewed the Charter of the Advisory Committee on International Law. This advisory committee will continue to obtain the views and advice of a cross-section of the country's outstanding members of the legal profession on significant issues of international law. The committee's consideration of legal issues in the conduct of our foreign affairs provides a unique contribution to the creation and promotion of U.S. foreign policy. The Under Secretary for Management has determined that the committee is necessary and in the public interest.

The committee consists of former Legal Advisers of the Department of State and not more than twenty individuals appointed by the Legal Adviser of the Department of State. The committee will follow the procedures prescribed by the Federal Advisory Committee Act (FACA). Meetings will be open to the public unless a determination is made in accordance with section 10(d) of the FACA, 5 U.S.C. §§ 552b(c) (1) and (4), that a meeting or a portion of the meeting should be closed to the public. Notice of each meeting will be provided for publication in the **Federal Register** as far in advance as possible prior to the meeting.

For further information, please call: John R. Crook, Assistant Legal Adviser for United States Affairs, (202) 647–2767.

II. Notice of Meeting

A meeting of the Advisory Committee on International Law will take place on Monday, June 15, 1998 from 9:00 a.m. to approximately 5:00 p.m., as necessary, in Room 140 of the United States Department of State, 2201 C Street, NW., Washington, D.C. The meeting will be chaired by the Legal Adviser of the Department of State, David R. Andrews, and will be open to the public up to the capacity of the meeting room. The meeting will discuss developments involving the International Court of Justice, reform and funding of the United Nations, the proposed convention on enforcement of judgments, recent legal developments involving treaties and other international agreements, and other current topics.

Entry to the building is controlled and will be facilitated by advance arrangements. Members of the public desiring access to the session should, by Wednesday, June 10, 1998, notify the Office of the Assistant Legal Adviser for United Nations Affairs (telephone (202) 647–2727) of their name, Social Security number, date of birth, professional affiliation, address and telephone number in order to arrange admittance. This includes both government and non-government admittance. All attendees must use the "C" Street entrance. One of the following valid IDs will be required for admittance: any U.S. driver's license and photo, a passport, or a U.S. Goverment agency ID.

Dated: May 19, 1998.

John R. Crook,

Assistant Legal Adviser for United Nations Affairs; Executive Director, Advisory Committee of International Law.

BILLING CODE 4710–08–M

DEPARTMENT OF STATE

[Public Notice #2821]

Shipping Coordinating Committee Subcommittee on Safety of Life at Sea, Working Group on Bulk Liquids and Gases; Notice of Meetings

The Working Group on Bulk Liquids and Gases (BLG) of the Subcommittee on Safety of Life at Sea (SOLAS) will conduct an open meeting at 1:00 PM on Monday, June 15, 1998 in Room 6103, U.S. Coast Guard Headquarters, 2100 Second Street, S.W., Washington, DC 20593–0001. The purpose of the meeting is to finalize preparations for the Third Session of the Subcommittee on Bulk Liquids and Gases of the International Maritime Organization (IMO) which will be held on July 6–10, 1998, at the IMO Headquarters in London.

The agenda items of particular interest:

a. Additional safety measures for tankers.

b. Tanker pump-room safety.

c. Revision of the International Convention for the Prevention of Pollution from Ships, 1973 as modified by the Protocol of 1978 (MARPOL 73/78) regulations I/22 to 24 in the light of the probabilistic methodology for oil outflow analysis.

d. Review of Annexes I and II of MARPOL 73/78.

e. Revision of carriage requirements for carbon disulfide in the International Code for the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk (IBC Code).

f. Requirements for personal protection involved in transportation of cargoes containing toxic substances in oil tankers.

g. Review of existing ships' safety standards: amendment to SOLAS regulations VII/9 and VII/12.

h. Review of specifications for crude oil washing systems.

i. Revision of chapter 8 of the IBC Code in the light of the revised SOLAS regulation II–2/59.

j. Evaluation of safety and pollution hazards of chemicals and preparation of consequential amendments.

In addition, a supplemental meeting, to discuss the possible revision of the environmental hazard evaluation and categorization mechanism of the IBC Code, will be held at 9:30 AM on Monday, June 15, 1998 in Room 1103, U.S. Coast Guard Headquarters, 2100 Second Street, S.W., Washington, DC 20593–0001. The purpose of this meeting will be to discuss the ramifications of going from a five pollution category system to a three pollution category system and, specifically, to determine how this change might affect the chemical shipping industry.

Members of the public may attend both meetings up to the seating capacity of the rooms. Interested persons may seek information by writing: Commander K.S. Cook, U.S. Coast Guard (G–MSO–3), 2100 Second Street, S.W., Washington, DC 20593–0001 or by calling (202) 267–1577.

Dated: May 14, 1998.

Stephen M. Miller,

Executive Secretary, Shipping Coordinating Committee.

BILLING CODE 4710–07–M

TENNESSEE VALLEY AUTHORITY

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: Tennessee Valley Authority (Meeting No. 1504).

TIME AND DATE: 9 a.m. (CDT), May 27, 1998.

PLACE: TVA Allen Fossil Plant Assembly Room, 2574 Plant Road, Memphis, Tennessee.

STATUS: Open.

Agenda

Approval of minutes of meeting held on April 8, 1998.

New Business

C—Energy

C1. Delegation of authority to the Senior Vice President, Procurement, or a designated representative, to enter into a uranium procurement contract with Global Nuclear Services and Supply Limited.

B—Purchase Award

B1. Supplement to Contract No. 97BYC–142392–001 with BTG, Inc., for personal computers, software, and related accessories.

E—Real Property Transactions

E1. Grant of a permanent easement to the City of Tupelo, Mississippi, affecting 1.49 acres in Lee County, Mississippi (Tract No. XTPCSC–7H), for the relocation of Brooks Road to accommodate the location of TVA's new Customer Service Center.

E2. Rescission of March 31, 1993, resolution directing payment of $398,217 annually to the City of Knoxville as mitigation payments associated with the purchase of the Knoxville TVA Office complex.

E3. Deed modification of certain deed provisions affecting approximately 0.22 acre of former TVA land on Watts Bar Lake (Tract No. XWBR–142) in Rhea County, Tennessee.

E4. Grant of a permanent easement to the City of Decatur, Alabama, for a waterline easement affecting 1.52 acres of land on Wheeler Lake in Morgan County, Alabama (Tract No. XTWR–107U).

E5. Sale of noncommercial, nonexclusive permanent easements to Hubert Helton and Steve Watson for construction and maintenance of recreational water-use facilities affecting a total of 0.29 acre of Tellico Lake shoreline in Monroe County, Tennessee (Tract Nos. XTELR–201RE and XTELR–202RE).

E6. Abandonment of certain easement rights affecting 0.7 acre of former TVA land on Norris Lake in Claiborne County, Tennessee (Tract No. XNR–468), to allow the property owner to construct a bridge and road to provide access to another section of currently inaccessible property.

Information Items

1. Approval of two 19-year commercial recreation leases at Possum Creek and Sale Creek recreation areas and amendments to the Chickamauga Reservoir Land Management Plan.

2. Approval of a 19-year commercial recreation lease and amendment to the reservoir plan for Agency Creek Recreation Area in Meigs County, Tennessee, and amendment to the Chickamauga Reservoir Land Management Plan.

3. Approval of a grant of easement to Greeneville Light and Power System affecting approximately 0.75 acre of TVA land on Nolichucky Lake in Greene County, Tennessee (Tract No. XTNOR–5SS).

4. Approval of a 19-year commercial recreation lease to Greenlee Campground, R.V. & Marine at Fall Creek Recreation Area on Cherokee Lake in Hamblen County, Tennessee.

5. Approval to file condemnation cases: The affected transmission lines are Oneida-McCreary, McCreary County, Kentucky; Tiptonville Switching Station, Tiptonville, Tennessee; Colbert-Tupelo primary tap to Belmont, Belmont, Mississippi; New Albany-Holly Springs tap to Martintown, Union County, Mississippi; Pickwick Dam-Memphis tap to Moscow, Fayette County, Tennessee; New Albany-Holly Springs tap to Martintown; and an access road to TVA's Martintown, Tennessee, substation site, Union County, Mississippi.

6. Approval to file condemnation cases. The affected transmission lines are Freeport-Miller tap to Mitchell's Corner, DeSoto County, Mississippi and Wolf Creek-Summer Shade tap to West Tompkinsville, Monroe County, Kentucky.

7. Approval of the sale of an easement for municipal governmental purposes to the City of Tupelo, Mississippi, affecting 3.07 acres of TVA's Tupelo Line Crew Headquarters property in Tupelo, Mississippi (Tract No. XTLCH–1E).

For more information: Please call TVA Public Relations at (423) 632–6000, Knoxville, Tennessee. Information is also available at TVA's Washington Office (202) 898–2999.

Dated: May 20, 1998.

Edward S. Christenbury,

General Counsel and Secretary.

UMI

DSU provides the rules for settlement of disputes concerning rights and obligations under the Uruguay Round agreements administered by the WTO. Interested persons are invited to submit their comments by June 25, 1998.

FOR FURTHER INFORMATION CONTACT: Amelia Porges, Senior Counsel for Dispute Settlement, Office of the USTR, (202) 395–7305, or William Kane, Associate General Counsel, Office of the USTR, (202) 395–6800.

SUPPLEMENTARY INFORMATION: The DSU provides a mechanism for the settlement of disputes between the governments which are members of the WTO, concerning rights and obligations under the Uruguay Round agreements. A panel of neutral experts conducts each dispute settlement proceeding and issues a report, which is considered by the Dispute Settlement Body (DSB) in which representatives of all WTO members participate. The DSB must adopt all panel reports within 60 days after they are circulated, unless one of the parties to the dispute notifies the DSB that it will appeal the decision (or the DSB decides by consensus to reject the report). Appeals are heard by the WTO Appellate Body (AB), which also issues a report. The DSB must adopt an appellate body report within 30 days after circulation (unless there is a consensus not to do so).

When it finds a measure is inconsistent with one of the covered agreements, a panel or the AB must recommend that the government concerned bring that measure into conformity with the agreement. At a DSB meeting held within 30 days after the panel or AB report is adopted, that government must state its compliance plans. The "reasonable period" for compliance can be determined by obtaining DSB approval of a time period proposed by that government, or by agreement between the disputing parties, or by binding arbitration. If a government does not comply with the recommendation to bring a measure into conformity with its WTO obligations, it must negotiate with the complaining government(s) on compensation, and the negotiations must start by the end of the "reasonable period". If there is no agreement on compensation by 20 days after the end of the "reasonable period", a complaining government may ask the DSB to authorize it to suspend trade benefits with respect to the non-complying party. By 30 days after the end of the "reasonable period", the DSB must grant such a request to suspend benefits (unless there is consensus otherwise). Such a suspension must be equivalent to the benefits the defending country is impairing by its WTO-inconsistent actions.

A Decision of trade ministers agreed on April 15, 1994, at the conclusion of the Uruguay Round of multilateral trade negotiations, invites the WTO Ministerial Conference to complete a "full review" of WTO dispute settlement rules and procedures within four years after the entry into force of the WTO Agreement and "to take a decision on the occasion of its first meeting after the completion of the review, whether to continue, modify or terminate" those rules and procedures. Under the WTO Agreement, this work may be carried out by the WTO's General Council. Discussions have begun on the organization of the review. A principal objective of the United States in the WTO, including in this review, is to enhance the openness and transparency of WTO meetings, decisions and dispute settlement proceedings.

Detailed information on the WTO and dispute settlement is available on the Internet at http://www.ustr.gov/reports/tpa/1998/iv.pdf; the text of the DSU is available on the Internet at http:www.wto.org/wto/dispute/dsu.htm.

Interested persons are invited to submit their comments on whether the WTO should continue, modify or terminate the DSU; on specific modifications which should be made to WTO dispute settlement rules and procedures; and on specific policies which the United States should pursue in this review. Comments should be filed no later than June 25, 1998. Comments must be in English and provided in 20 copies to Gloria Blue, Executive Secretary, Trade Policy Staff Committee, Office of the United States Trade Representative, Room 501, 600 17th Street, Washington, DC 20508. Commenters are requested to submit only non-confidential information and not to submit business confidential information. Non-confidential information received will be available for public inspection by appointment, in the USTR Reading Room, Room 101, Monday through Friday, 10:00 a.m. to 12:00 noon and 1:00 p.m. to 4:00 p.m. For an appointment call Brenda Webb on 202–395–6186.

Frederick L. Montgomery,

Chairman, Trade Policy Staff Committee.

BILLING CODE 3190–01–M

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Initiation of Section 302 Investigation and Request for Public Comment: Mexican Practices Affecting High Fructose Corn Syrup (HFCS)

AGENCY: Office of the United States Trade Representative.

ACTION: Notice of initiation of investigation and request for comments.

SUMMARY: The United States Trade Representative (USTR) has initiated a Section 301 investigation with respect to certain acts, policies and practices of the Government of Mexico that affect access to the Mexican market for High Fructose Corn Syrup (HFCS). The USTR invites written comments from the public on the matters being investigated and the determinations to be made at the end of that investigation.

DATES: This investigation was initiated on May 15, 1998. Written comments from the public are due on or before noon on Friday, June 19, 1998.

ADDRESSES: Office of the United States Trade Representative, 600 17th Street NW., Washington, DC 20508.

FOR FURTHER INFORMATION CONTACT: John Melle, Senior Director, North American Affairs, (202) 395–3412 or Audrey Winter, Associate General Counsel, (202) 395–7305.

SUPPLEMENTARY INFORMATION: On April 2, 1998, the Corn Refiners Association, Inc., filed a petition pursuant to section 302(a) of the Trade Act of 1974, as amended, (the Trade Act) (19 U.S.C. 2411) alleging that certain acts, policies and practices of the Government of Mexico affecting HFCS are unreasonable, deny fair and equitable market opportunities for U.S. exporters of HFCS and are actionable under section 301. In particular, the petition alleges the following: In September 1997, with the support and encouragement of the Government of Mexico, representatives of the Mexican sugar industry and the Mexican soft drink bottling industry entered into an agreement to limit the soft drink industry's consumption of HFCS. The purpose and effect of this agreement are to restrict both the volume of HFCS imports from the United States and the manufacture of HFCS by the U.S. companies that have made investments in Mexican production facilities. In exchange for the soft drink industry's limitation of HFCS consumption, the Mexican sugar industry agreed to supply sugar to the soft drink bottlers at discounted, below-market prices. The Government of Mexico is actively

supporting this restraint agreement. The agreement has reduced U.S. exports of HFCS to Mexico and therefore burdened and restricted U.S. commerce.

Section 302(a) of the Trade Act authorizes the USTR to initiate an investigation under chapter 1 of Title III of the Trade Act (commonly referred to as "section 301") in response to the filing of a petition pursuant to section 302(a)(1). Matters actionable under section 301 include, *inter alia*, acts, policies, and practices of a foreign country that are unjustifiable, unreasonable, or discriminatory and burden or restrict U.S. commerce. An act, policy or practice is unjustifiable if it is in violation of, or inconsistent with the international legal rights of the United States. An act, policy or practice is unreasonable if the act, policy or practice, while not necessarily in violation of, or inconsistent with, the international legal rights of the United States, is otherwise unfair or inequitable. Unreasonable acts, policies or practices include, *inter alia*, denial of fair and equitable market opportunities.

Initiation of Investigation and Consultations

On May 15, 1998, the USTR determined that an investigation should be initiated to determine whether certain acts, policies or practices of the Government of Mexico affecting access to the Mexican market for HFCS are unreasonable and burden or restrict U.S. commerce and are, therefore, actionable under section 301.

Pursuant to section 303(a) of the Trade Act, the USTR has requested consultations with the Government of Mexico concerning the issues under investigation. USTR will seek information and advice from the appropriate representatives provided for under section 135 of the Trade Act in preparing the U.S. presentations for such consultations.

Public Comment: Requirements for Submissions

Interested persons are invited to submit written comments concerning the issues raised in the petition and any other submissions to USTR in this investigation. In particular, comments are invited regarding (i) the acts, policies and practices of the Government of Mexico that are the subject of this investigation; (ii) the amount of burden or restriction on U.S. commerce caused by these act, policies and practices; (iii) the determinations required under section 304 of the Trade Act; and (iv) appropriate action under section 301 which could be taken in response.

Comments must be filed in accordance with the requirements set forth in 15 CFR 2006.8(b) (55 FR 20593) and must be filed on or before noon on Friday, June 19, 1998. Comments must be in English and provided in twenty copies to: Sybia Harrison, Staff Assistant to the Section 301 Committee, Room 223, Office of the U.S. Trade Representative, 600 17th Street, NW., Washington, DC 20508.

Comments will be placed in a file (Docket 301–118) open to public inspection pursuant to 15 CFR 2006.13, except confidential business information exempt from public inspection in accordance with 15 CFR 2006.15. Confidential business information submitted in accordance with 15 CFR 2006.15 must be clearly marked "BUSINESS CONFIDENTIAL" in a contrasting color ink at the top of each page on each of 20 copies, and must be accompanied by a nonconfidential summary of the confidential information. The nonconfidential summary shall be placed in the file that is open to public inspection. Copies of the public version of the petition and other relevant documents are available for public inspection in the USTR Reading Room. An appointment to review the docket (Docket No. 301–118) may be made by calling Brenda Webb (202) 395–6186. The USTR Reading Room is open to the public from 9:30 a.m. to 12 noon and 1:00 p.m. to 4:00 p.m., Monday through Friday, and is located in Room 101.

Irving A. Williamson,

Chairman, Section 301 Committee.

BILLING CODE 3190–01–M

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No. OST–96–1436]

Filing Procedures for the DOT Docket; Electronic Submission

AGENCY: Office of the Secretary (OST), DOT.

ACTION: Notice requesting comment.

SUMMARY: The Department of Transportation (DOT) is requesting the public to comment on its plan to revise its document filing requirements to provide for electronic submission of information to its central dockets management system (DMS). Electronic submission would provide more convenience than the current requirement to submit paper, by allowing DOT customers to file documents from their desktop computers. It also would streamline docket processing to accommodate the anticipated increases in volume.

DATES: Comments must be submitted by July 27, 1998.

ADDRESSES: Comments should be addressed to the Central Docket Management Facility, (CDMF) SVC–124.1, PL–401, Docket No. OST–96–1436, Department of Transportation, 400 7th Street, SW., Washington, DC 20590. Any person wishing acknowledgment that his/her comments have been received should include a self-addressed stamped postcard. Comments received will be available for public inspection and copying in the CDMF, Room PL–401, from 10 a.m. to 5 p.m. ET Monday through Friday, except Federal Holidays.

FOR FURTHER INFORMATION CONTACT: Ms. Dorothy W. Walker, Chief Dockets, SVC–124, (202) 366–9329.

SUPPLEMENTARY INFORMATION: DOT consolidated its nine separate docket facilities into a central DMS and is continuing the conversion from a paper-based system to an optical imaging system for more efficient receipt, storage, management, and retrieval of docketed information. In order to complete this phased transition to an electronic docket system, DOT plans to develop an Electronic Submission (ES) enhancement for its DMS that would allow customers to submit documents electronically from their desktops into the Docket. Currently all filings must be submitted as a paper hard copy to the DMS. The paper documents are then processed into the DMS by entering a document database record, scanning the paper, and performing quality assurance (QA) on the document images and data to resolve any errors.

DOT also plans to revise its document filing requirements to provide for ES. ES is not intended to replace the current paper-based submission process since not all filers will have access to computers. DMS will retain the paper-based filing process and continue to accept paper. DOT also is considering a direct dial-in capability for those without Internet access and to provide a backup capability in the event Internet access is temporarily unavailable. All documents that are electronically submitted would be stored in a separate database for ES waiting to be processed by DMS staff. DMS staff would need to perform QA review of ES filings prior to saving the documents into the production DMS.

For the sake of simplicity, the Office of the Secretary is issuing this notice on behalf of all of DOT's constituent

agencies. Ultimately, we envision that ES would be available for all of the constituent DOT agencies; although at this time, not all have fully consolidated into the DMS. To ensure the quality of the product developed, DOT is evaluating its internal needs as well as those of the general public. Substantial changes to the DMS business processes and procedures and to agency filing requirements may be needed.

This notice is intended to inform the public about, and to solicit public comment on, electronic submission and any necessary changes to our filing requirements. It may be downloaded from the DMS Web Site News Page located at http://dms.dot.gov by clicking on the News Link. The questions are intended only to elicit any thoughts and ideas you may have on the ES enhancement to DMS.

User-System Interaction

1. What is your current use of DMS?
2. What capabilities would you like to see in the ES system?
3. Are there any other systems that you use now or are aware of that we should look at in developing ES?
4. What method should DMS use to send/receive information using ES? For example, e-mail, dial-in, Netscape, Internet Explorer, etc.
5. Should the DMS notify you that your document has: (1) arrived; and (2) been accepted?
6. In case the document is rejected, what information should the DMS send back to the submitter? (e.g., time of submission, reason for rejection).
7. Should the DMS provide submitters with an electronic submission form to fill out with information such as organization, docket id, name and address, point of contact, etc.? Filling out such a form could take some time, but could ensure better accuracy. The DMS staff would file the submitter's information as submitted rather than entering it into a record upon receipt, possibly incorrectly.

Document Size and Format

1. How many pages are in the largest documents you have ever submitted?
2. How many documents do you submit on average each day? Each month?
3. What word processing software do you use to prepare your documents? (e.g., Word Perfect (WP), Microsoft Word, etc.)
4. What charts or graphics software does the DMS need to accommodate? (e.g., Power Point, Harvard Graphics, Corel Draw, Freelance.)

Document Date and Time

1. Would you find it useful if you were able to submit documents outside normal business hours?

Security

1. Should the DMS require a unique login id/password to submit a document electronically?
2. Do you have a need to submit comments anonymously?
3. If so, how could the DMS staff contact you in case your submission is incomplete or additional information is needed?
4. Is it important that the DMS validate the identity of the sender of a document?
5. Should ES allow for encryption in order to protect the contents of a document during submission?

General

1. Are there any other special needs that we should consider?
2. Are there any additional capabilities the ES system should have?

Issued in Washington, DC on May 20, 1998.

Neil R. Eisner,

Assistant General Counsel for Regulation and Enforcement.

BILLING CODE 4910–62–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

Reports, Forms and Recordkeeping Requirements Agency Information Collection Activity Under OMB Review

AGENCY: Office of the Secretary, DOT.

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection(ICR) abstracted below has been forwarded to the Office of Management and Budget (OMB) for review and comment. The ICR describes the nature of the information collection and its expected burden. The **Federal Register** Notice with a 60-day comment period soliciting comments on the above collection of information was published on March 9, 1998, [63 FR 11472].

DATES: Comments must be submitted on or before June 25, 1998.

FOR FURTHER INFORMATION CONTACT: Judith Street, ABC–100; Federal Aviation Administration; 800 Independence Avenue, SW.; Washington, DC 20591; Telephone number (202) 267–9895.

SUPPLEMENTARY INFORMATION:

Federal Aviation Administration (FAA)

Title: Notice of Proposed Construction or Alteration, Notice of Actual Construction or Alteration, and Project Status Request.

OMB Control Number: 2120–0001.

Type of Request: Extension of a currently approved collection.

Affected Public: Persons or businesses planning to construct or alter a structure that may affect air safety.

Abstract: Federal Regulations (CFR Part 77 of Title 14)require all persons to report proposed or actual construction/alternation of structures affecting air safety in order to promote safety in air commerce and the efficient use and preservation of the navigable airspace and of airport traffic capacity at public-use airports.

Annual Estimated Burden Hours: 8,820 hours.

ADDRESSES: Send comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725–17th Street, NW., Washington, DC 20503, Attention FAA Desk Officer.

Comments are Invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Issued in Washington, D.C. on May 15,1998.

Vanester M. Williams,

Clearance Officer, United States Department of Transportation.

DEPARTMENT OF TRANSPORTATION

Notice of Applications for Certificates of Public Convenience and Necessity and Foreign Air Carrier Permits Filed Under Subpart Q During the Week Ending May 15, 1998

The following Applications for Certificates of Public Convenience and Necessity and Foreign Air Carrier Permits were filed under Subpart Q of the Department of Transportation's Procedural Regulations (See 14 CFR 302.1701 et. seq.). The due date for Answers, Conforming Applications, or Motions to Modify Scope are set forth below for each application. Following the Answer period DOT may process the application by expedited procedures. Such procedures may consist of the adoption of a show-cause order, a tentative order, or in appropriate cases a final order without further proceedings.

Docket Number: OST–98–3853.

Date Filed: May 13, 1998.

Due Date for Answers, Conforming Applications, or Motions to Modify Scope: June 10, 1998.

Description: Application of United Air Lines, Inc. pursuant to 49 U.S.C. Section 41101 and Subpart Q of the Regulations, applies for a certificate of public convenience and necessity authorizing it to provide scheduled foreign air transportation of persons, property and mail between any point or points in the United States directly and via any intermediate point or points and any point or points in France and beyond France to any point or points in third countries.

Docket Number: OST–98–3854.

Date Filed: May 14, 1998.

Due Date for Answers, Conforming Applications, or Motions to Modify Scope: June 11, 1998.

Description: Application of Air Transat A.T., Inc. pursuant to 49 U.S.C. Section 40109 and Subpart Q of the Regulations, requests to amend its foreign air carrier permit to include scheduled air transportation of persons, property and mail between a point or points in Canada, on the one hand, and a point or points in the United States, on the other hand. Air Transat also requests authority to operate fifth freedom charter flights from or via a point or points in the United States to a point or points in third countries.

RTCA, Inc.; Certification Task Force

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (P.L. 92–463, 5 U.S.C., Appendix 2), notice is hereby given that the first meeting of the RTCA, Inc., Certification Task Force will be held June 11–12, 1998, at the Army & Navy Club, 901 17th Street, NW., Washington, DC, 2006, starting at 8:30 a.m. on June 11. This task force will review the "end-to-end" certification of advanced avionics systems, then, keeping safety as a first priority, develop recommendations for improving the timeliness and reducing the costs of certification.

The meeting agenda will include: (1) Welcome and Introductory Remarks; (2) A Presentation by Task Force Co-chairs Mr. Tony Broderick (former FAA associate administrator and now consultant to Airbus) and Mr. Ed Stimpson (General Aviation Manufacturers Association); (3) Presentations by the leaders of the four task force working groups focusing on the task force objectives, organization, and planned milestones in areas such as demonstrated performance of current systems, human factors considerations, the certification process, and certification services; (4) Open Discussion.

Concurrent working group sessions will take place at RTCA, Inc., 1140 Connecticut Avenue, NW., Suite 1020, Washington, DC 20036, commencing at 1:00 p.m. on June 11 and 8:30 a.m. on June 12. A summary plenary session will be held at 11:30 a.m. at RTCA, Inc., on June 12.

Attendance is open to the interested public but limited to space availability. With the approval of the co-chairmen, members of the public may present oral statements at the meeting. Persons wishing to present statements or obtain information should contact RTCA at (202) 833–9339 (phone), (202) 833–9434 (fax), or dclarke@rtca.org (e-mail). Members of the public may present a written statement to the committee at any time.

Issued in Washington, DC, on May 18, 1998.

Janice L. Peters,

Designated Official.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–98–3807]

Notice of Request for Renewal of a Currently Approved Information Collection: Indian Reservation Roads Program Administration Survey

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, this notice announces the intention of the FHWA to request the Office of Management and Budget (OMB) to renew its clearance of the currently approved information collection identified below under Supplementary Information. This information collection provides for surveying Indian tribal governments regarding their satisfaction with the FHWA's Indian Reservation Roads Program.

DATES: Comments must be submitted on or before July 27, 1998.

ADDRESSES: All signed, written comments should refer to the docket number that appears in the heading of this document and must be submitted to the Docket Clerk, U.S. DOT Dockets, Room PL–401, 400 Seventh Street, SW., Washington, DC 20590–0001. All comments received will be available for examination at the above address between 10:00 a.m. and 5:00 p.m., e.t., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped envelope or postcard.

FOR FURTHER INFORMATION CONTACT: Ms. Francine Shaw-Whitson, HFL–11, Room 4206, (202) 366–9483, Federal Lands Highway Office, or Mr. Wilbert Baccus, HCC–10, Room 4230, (202) 366–0780, Office of Chief Counsel, Federal Highway Administration, Department of Transportation, 400 Seventh Street, SW., Washington, DC 20590. Office hours are from 7:45 a.m. to 4:15 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Title: Indian Reservation Roads Program Administration Survey.

OMB Number: 2125–0565.

Background: Title 23, United States Code, Section 204(f) provides the authority for the FHWA and the Bureau of Indian Affairs (BIA) to jointly administer the Indian Reservation Roads (IRR) Program. In accordance with the Government Performance and Results Act, the FHWA is required to establish performance measures consistent with the overall program goals and outcomes. In addition, Executive Order 12862 provides for surveying customers to determine the kind and quality of services they want and the level of satisfaction with existing services. Tribal governments are the IRR program customers.

The information collected is used by the FHWA and the BIA to improve the administration of the IRR program. This survey gathers information from the tribes to assess, (1) their overall levels of understanding of the IRR program; (2) their involvement in the IRR program; and (3) their satisfaction with the IRR program administration and accomplishments. In addition, the survey allows tribes to propose recommendations for improving the operation and administration of the IRR program.

Respondents: 558 Indian tribal governments.

Estimated Average Burden per Response: 0.5 hours.

Estimated Total Annual Burden: 279 hours.

Frequency: Biennial.

Public Comments Invited

Interested parties are invited to send comments regarding any aspect of this information collection, including, but not limited to: (1) the necessity and utility of the information collection for the proper performance of the functions of the FHWA; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the collected information; and (4) ways to minimize the collection burden without reducing the quality of the collected information. Comments submitted in response to this notice will be summarized and/or included in the request for OMB's clearance for a renewal of this information collection.

Electronic Availability

An electronic copy of this document may be downloaded using a modem and suitable communications software from the **Federal Register** electronic bulletin board service (telephone number: 202–512–1661). DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–98–3808]

Notice of Request for Renewal of a Currently Approved Information Collection: Financial Responsibility, Trucking and Freight Forwarding

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, this notice announces the intention of the FHWA to request the Office of Management and Budget (OMB) to renew its clearance of the currently approved information collection identified below under Supplementary, Information. This information collection provides registered motor carriers, property brokers, and freight forwarders a means of meeting financial security documentation requirements.

DATES: Comments must be submitted on or before July 27, 1998.

ADDRESSES: All signed, written comments should refer to the docket number that appears in the heading of this document and must be submitted to the Docket Clerk, U.S. DOT Dockets, Room PL–401, 400 Seventh Street, SW., Washington, DC 20590–0001. All comments received will be available for examination at the above address between 10:00 a.m. and 5:00 p.m., e.t., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped envelope or postcard.

FOR FURTHER INFORMATION CONTACT: Ms. Marian Lee, Office of Motor Carrier Information Analysis, (202) 358–7051, Federal Highway Administration, Department of Transportation, 400 Seventh Street, SW., Washington, DC 20590. Office hours are from 7:45 a.m. to 4:15 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Title: Financial Responsibility, Trucking and Freight Forwarding.

OMB Number: 2125–0570.

Background: The Secretary of Transportation is authorized to register for-hire motor carriers of regulated commodities under the provisions of 49 U.S.C. 13902, surface freight forwarders under the provisions of 49 U.S.C. 13903, and property brokers under the provisions of 49 U.S.C. 13904. These persons may conduct transportation services only if they are registered pursuant to 49 U.S.C. 13901. The Secretary has delegated authority pertaining to these registrations to the FHWA. Registration remains valid only as long as the transportation entities maintain, on file with the FHWA, evidence of the required levels of insurance coverage pursuant to 49 U.S.C. 13906. Regulations governing financial responsibility requirements are found at 49 CFR 387.

Forms BMC–91, 91x and 82 provide evidence of the required coverage for bodily injury and property damage (BI&PD) liability. Forms BMC–34 and 83 establish compliance with cargo liability requirements. Forms BMC–84 and 85 are filed by brokers to comply with the requirement for a $10,000 surety bond or trust fund agreement. Forms BMC–35, 36, and 85 cancel prior filings. Forms BMC–90 and 32 are endorsements which must be attached to BI&PD and cargo insurance policies, respectively, but are not filed with the FHWA.

Motor carriers can also apply to self-insure BI&PD and/or cargo liability in lieu of filing certificates of insurance or surety bonds with the FHWA. Form BMC–40 is the application used to apply for self-insurance authority.

Respondents: Motor carriers, freight forwarders, and brokers.

Estimated Average Burden per Response: The estimated average burden per response for the BMC–40 is 40 hours. The estimated average burden per response for each of the other forms is 10 minutes per form.

Estimated Total Annual Burden: The estimated total annual burden is 200 hours for the BMC–40 based on 5 filings per year. The estimated total annual burden for all of the other forms is 30,000 hours based on 180,000 filings per year.

Frequency: Certificates of insurance, surety bonds and trust fund agreements are required when the transportation entity first registers with the FHWA and then when such coverages are replaced. Notices of cancellation are required only when such certificates of insurance, surety bonds or trust fund agreements are canceled. Form BMC–40 is generally

filed only once when a carrier seeks approval to self-insure its BI&PD and/or cargo liability.

Public Comments Invited

Interested parties are invited to send comments regarding any aspect of this information collection, including but not limited to: (1) the necessity and utility of the information collection for the proper performance of the functions of the FHWA; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the collected information; and (4) ways to minimize the collection burden without reducing the quality of the collected information. Comments submitted in response to this notice will be summarized and/or included in the request for OMB's clearance for a renewal of this information collection.

Electronic Availability

An electronic copy of this document may be downloaded using a modem and suitable communications software from the **Federal Register** electronic bulletin board service (telephone number: 202–512–1661). Internet users may reach the **Federal Register**'s WWW site at: http://www.access.gpo.gov/su__ docs.

Authority: 23 U.S.C. 315 and 49 CFR 1.48.
Issued on: May 13, 1998.

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[FRA Docket No. RSGC–7]

Environmental Impact Statement: FRA Regulation of the Use of Locomotive Horns at Highway-Rail Grade Crossings Nationwide

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of intent.

SUMMARY: FRA is issuing this notice to advise the public that an environmental impact statement (EIS) will be prepared for the proposed regulation covering the sounding of locomotive horns at highway-rail grade crossings and to solicit input into the development of the scope of that EIS.

FOR FURTHER INFORMATION CONTACT: Regarding the environmental review contact David Valenstein, Environmental Specialist, Office of Railroad Development, Federal Railroad Administration (RDV 13), 400 Seventh Street, SW (Mail Stop 20), Washington, D.C. 20590, (telephone 202 632–3268). For information regarding the rule making process contact Bruce F. George, Staff Director, Highway Rail Crossing and Trespasser Programs, Office of Safety, FRA, 400 Seventh Street, SW (Mail Stop 25), Washington, D.C. 20590 (telephone 202 632–3312), or Mark H. Tessler, Office of Chief Counsel, FRA, 400 Seventh Street, SW (Mail Stop 10), Washington, D.C. 20590 (telephone 202 632–3171).

SUPPLEMENTARY INFORMATION:

Background 0

The Swift Rail Development Act (Pub. L. 103–440, November 2, 1994) added Section 20153 to title 49, United States Code. That section directs the Secretary of Transportation (delegated to the Federal Railroad Administrator) to prescribe regulations requiring that a locomotive horn be sounded while each train is approaching and entering upon each public highway-rail grade crossing. In addition, 49 U.S.C. 20153 provides FRA the authority to except from this requirement, categories of rail operations or categories of grade crossings that: (1) Are determined not to present significant risk with respect to loss of life or serious personal injury; (2) for which the use of a locomotive horn is impractical; or (3) for which supplementary safety measures fully compensate for the absence of the warning provided by the locomotive horn.

The sounding of locomotive horns at highway-rail grade crossings is recognized by FRA and the railroad industry as contributing to railroad and highway safety. Studies conducted by FRA of circumstances where the sounding of horns had been restricted in eastern Florida (so-called "whistle bans") have indicated an increased incidence of collisions involving trains and highway users where locomotive horns were not sounded. Although the sounding of locomotive horns at highway-rail grade crossings is the normal practice at most of the 162,000 public grade crossings in the U.S., FRA is aware of approximately 2,200 crossings in 200 communities where locomotive horns are not routinely sounded.

In preparing for the rulemaking process required by 49 U.S.C. 20153, FRA established a public docket to enable local officials and citizens to offer their insight into the issues surrounding whistle bans and to comment on how FRA might best implement 49 U.S.C. 20153. FRA also undertook extensive research into locomotive horns and their relationship to grade crossing safety through the Department of Transportation's John A. Volpe National Transportation Systems Center. Some of the comments offered by the public expressed concerns that any regulation requiring the sounding of locomotive horns could create adverse environmental impacts in the form of significantly higher community noise levels in the vicinity of those highway-rail grade crossings where horns are presently not sounded. Based upon a review of these comments, and ongoing research, FRA has concluded that the promulgation of the regulation required by 49 U.S.C. 20153 is a major Federal action as this term is used in section 102(c) of the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*) As a consequence, FRA is initiating the preparation of an EIS as required under NEPA and the regulations of the President's Council on Environmental Quality implementing NEPA (40 CFR S 1502).

Alternatives

FRA currently plans to analyze two alternatives in this environmental review, the proposed action and the "no-action" alternative. The proposed action is to comply with the statutory mandate and issue a regulation requiring the sounding of locomotive horns at every public highway-rail grade crossing in the U.S., including those where locomotive horns are presently not sounded. Such a rule would effectively preempt any State or local law or regulation to the contrary. The regulation encompassed in the proposed action would also identify a number of measures which the States and communities can undertake to provide improved safety at public highway-rail grade crossings. In such situations regular sounding of railroad horns would then become unnecessary from a safety perspective and could cease. The regulation would also establish a procedure for consideration by FRA of proposals by States, communities or other interested persons for approval of new supplementary safety measures that would permit designation of a quiet zone. The environmental impacts of requiring the sounding of locomotive horns at public highway-rail crossings where the horns are not presently sounded and a consideration of the environmental impacts associated with the implementation of supplementary safety measures would be a part of the proposed action analysis.

The no-action alternative would involve maintenance of the status quo with respect to the sounding of locomotive horns. This would require

alternative amendments to existing legislation.

Areas of Significant Environmental Concern

FRA's review of the current practice of sounding locomotive horns at highway-rail grade crossings and the comments received thus far in the public docket of this rulemaking have identified two primary areas of environmental concern associated with the proposed regulation, noise (and related impacts) and safety.

Scoping and Comments

FRA encourages broad participation in the EIS process during scoping and review of the resulting environmental documentation. Comments and suggestions are invited from all interested agencies and the public at large to insure the full range of issues related to the proposed action and all reasonable alternatives are addressed and all significant issues are identified. In particular, FRA is interested in determining whether there are any other reasonable alternatives consistent with the provisions of 49 U.S.C. 20153 and whether there are other areas of environmental concern where there might be the potential for significant impacts, either adverse or favorable, as a result of promulgating the proposed rule.

Due to the national scope of the proposed regulation, FRA does not plan to hold public scoping meetings. Notices soliciting comments have been and will be sent to appropriate Federal, State, and local agencies, private organizations and citizens who have expressed an interest in this rulemaking and made available to the media in areas that have been identified to date as currently subject to whistle bans or where whistle bans have been preempted by FRA order. Persons interested in providing comments on the scope of this environmental document should do so by June 19, 1998. Comments can be sent in writing to Mr. David Valenstein at the address identified above. Comments can also be sent via the Internet at: FRAEIS@fra.dot.gov.

The Remaining Environmental Review Process

Comments received on the scope and methodology to be used in preparation of the EIS will be reviewed by FRA to develop the final scope of the environmental review. A summary of the comments received will be provided to agencies and members of the public expressing an interest in this environmental review. FRA and its consultants will then undertake preparation of a draft EIS which will be made available to the public for comment. This is presently scheduled for the late fall 1998. It is FRA's intention that the comment period for the draft EIS will occur during the comment period associated with the proposed rule so that interested agencies and the public can combine their comments and that the environmental issues can be fully considered as FRA develops the final rule. After reviewing comments on the draft EIS, FRA will prepare a final EIS that addresses these comments and incorporates any additional analyses and material deemed necessary. The final EIS will be made available for public review for not less than 30 days before FRA takes any final action on the proposed rule.

Internet

This notice and all subsequent documents prepared as part of this environmental review will be available in the environmental pages of the FRA Internet website, located at: *http://www.fra.dot.gov*

Issued in Washington, D.C. on: May 19, 1998.

Donald M. Itzkoff,

Deputy Administrator.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Application for Approval of Discontinuance or Modification of a Railroad Signal System or Relief from the Requirements of Title 49 Code of Federal Regulations Part 236

Pursuant to Title 49 Code of Federal Regulations (CFR) Part 235 and 49 U.S.C. App. 26, the following railroads have petitioned the Federal Railroad Administration (FRA) seeking approval for the discontinuance or modification of the signal system or relief from the requirements of 49 CFR Part 236 as detailed below.

Block Signal Application (BS–AP)-No. 3463

Applicants: Houston Belt and Terminal Railway Company, Mr. J. B. Mathis, General Manager, 501 Crawford, Room 515, Houston, Texas 77002–2192.

Burlington Northern and Santa Fe Railway Company, Mr. William G. Peterson, Director Signal Engineering, 4515 Kansas Avenue, Kansas City, Kansas 66106.

Union Pacific Railroad Company, Mr. Bruce E. Williams, Director Signal Design, 1416 Dodge Street, Room 1000, Omaha, Nebraska 68179–1000.

The Houston Belt and Terminal Railway Company, Burlington Northern and Santa Fe Railway Company, and Union Pacific Railroad Company, jointly seek approval of the proposed discontinuance and removal of the traffic control system, on the East Main Track, between Control Point 169, milepost 9.6 and Control Point 183, milepost 10.9, on the West Belt Subdivision, in Houston, Texas, including removal of Control Points 175 and 178, and associated signals, power-operated switch machines, and track circuits.

The reasons given for the proposed changes are that the track serves yards and the signal system is no longer required.

BS–AP–No. 3464

Applicants: Southern California Regional Rail Authority, Mr. David Solow, Deputy Executive Director, 700 South Flower Street, Suite 2600, Los Angeles, California 90017–4101.

Santa Clarita Railroad, Mr. James Clark, Manager of Operations, 25135 Anza, Santa Clarita, California 91355.

Union Pacific Railroad Company, Mr. Bruce E. Williams, Director Signal Design, 1416 Dodge Street, Room 1000, Omaha, Nebraska 68179–1000.

The Southern California Regional Rail Authority, Santa Clarita Railroad, and Union Pacific Railroad Company jointly seek approval of the proposed reduction to the interlocking limits of CP Saugus, milepost 32.4, Saugus, California, Valley Subdivision, consisting of the conversion of the No. 3 power-operated switch to hand operation, conversion of interlocked signal "2WC" to absolute signal "3240," in lieu of an electric lock, removal of signal "2WA," and installation of a new interlocked signal "W," 642 feet west of the 2WA location.

The reason given for the proposed changes is to modify the interlocking to reflect change in operating practices.

BS–AP–No. 3465

Applicant: Long Island Rail Road, Mr. Frederick E. Smith, P.E., Chief Engineer, Hillside Maintenance Complex, 93–59 183 Street, Hollis, New York 11423.

The Long Island Rail Road seeks approval of the proposed temporary discontinuance of Cabin "M" Interlocking, on the Montauk Branch, in Queens County, New York, until June 1999, and govern train movements through the interlocking by issuance of a Clearance Card Form C, Rule 331 of

Long Island Rail Road's "Rules of The Operating Department."

The reason given for the proposed changes is that the location was destroyed by fire and is currently being redesigned. Upon completion of the design work, the signal enclosure will be wired by a third party vendor, with installation, testing, and completion expected during the first half of 1999.

BS–AP–No. 3466

Applicant: Central Michigan Railway Company, Mr. James P. Pitz, Chief Operating Officer, 1410 S. Valley Center Drive, Bay City, Michigan 48706–9998.

The Central Michigan Railway Company seeks approval of the proposed modification of the signal system, on the single main track, near Carrollton, Michigan, on the Saginaw Subdivision, consisting of the relocation of the southbound approach signal from milepost 41.9 to milepost 41.3. The proposed changes are associated with the replacement of the existing pole line with polarized track circuits, and installation of a new signal to govern movements from the Old GT Spur Track to the Saginaw Subdivision Main Track.

The reason given for the proposed changes is the elimination of a pole line for signal control circuits and relocation of the approach signal for improved visibility.

BS–AP–No. 3467

Applicant: CSX Transportation, Incorporated, Mr. R. M. Kadlick, Chief Engineer Train Control, 500 Water Street (S/C J–350), Jacksonville, Florida 32202.

CSX Transportation, Incorporated seeks approval of the proposed modification of the signal system, on all tracks, between milepost CA–520.7 and milepost CA–527.7, near Russell, Kentucky, on the Kanawha and Russell Subdivisions, Huntington Division, consisting of the following:

1. Discontinuance and removal of absolute controlled signals 2L and 2R at West End "RU," milepost CA–524.3;

2. Discontinuance and removal of absolute controlled signals 14RA, 14RB, 16R, 16L, 18L, 20RA, 20RB, 20RC, 20RD, 20L, 22L, 24RA, 24RB, 24RC, and 24L at "RU" Tower, milepost CA–524.3 to CA–524.0; and

3. Discontinuance and removal of absolute controlled signals 50R, 50L, 52R, 52L, and power crossover 51 at East End "RU," milepost CA–523.2.

The reason given for the proposed changes is to eliminate facilities no longer needed in present day operation and increase operating efficiency.

BS–AP–No. 3468

Applicant: CSX Transportation, Incorporated, Mr. R. M. Kadlick, Chief Engineer Train Control, 500 Water Street (S/C J–350), Jacksonville, Florida 32202.

CSX Transportation, Incorporated seeks approval of the proposed modification of the traffic control system, on the single main track, milepost BA–81.44, near Harpers Ferry Interlocking, West Virginia, Cumberland Subdivision, Baltimore Service Lane, consisting of the discontinuance and removal of the interconnected, single wire loop, bridge fire detection system.

The reason given for the proposed changes is the poor reliability of this type of system, along with the advances in communication systems in today's environment, renders this type of system obsolete.

BS–AP–No. 3469

Applicants: CSX Transportation, Incorporated, Mr. R. M. Kadlick, Chief Engineer Train Control, 500 Water Street (S/C J–350), Jacksonville, Florida 32202.

Norfolk Southern Corporation, Mr. W. C. Johnson, Chief Engineer S&E Engineering, 99 Spring Street, S.W., Atlanta, Georgia 30303.

CSX Transportation, Incorporated (CSXT) and Norfolk Southern Corporation (NS) jointly seek approval of the proposed discontinuance and removal of the power-operated derails, on the NS single main track, at Wilson North Carolina, where two main tracks of CSXT cross at grade the NS single main track, on the CSXT Florence Service Lane, South End Subdivision, milepost A–136.5, and on the NS Piedmont Division, NS District, milepost NS–182.3.

The reason given for the proposed changes is to improve operations and increase efficiency.

BS–AP–No. 3470

Applicant: Burlington Northern and Santa Fe Railway, Mr. William G. Peterson, Director Signal Engineering, 4515 Kansas Avenue, Kansas City, Kansas 66106.

The Burlington Northern and Santa Fe Railway seeks approval of the proposed modification of the signal system, on Main Track No. 1, at Stockton, California, milepost 1121.8, Northern California Division, consisting of the conversion of power-operated switch No. 73 to hand operation, equipped with an electric lock, and removal of associated signals No.'s 73, 76A, and 76B.

The reason given for the proposed changes is that the power-operated switch is no longer needed for operations and removal would accommodate and simplify the replacement of Stockton Tower.

BS–AP–No. 3471

Applicant: Union Pacific Railroad Company, Mr. P. M. Abaray, Chief Engineer-Signals, 1416 Dodge Street, Room 1000, Omaha, Nebraska 68179–1000.

The Union Pacific Railroad Company (UP) seeks approval of the proposed temporary discontinuance of signal system, on the main track between Littleton, milepost 727.1 and South Denver, milepost 733.4, at Denver, Colorado, on the Colorado Springs Subdivision, for the duration of the track and signal construction project, and operate trains by track warrant control. The proposal involves the removal of all signals and remote controlled switches on the UP trackage between Signal 1E at Littleton and Signal 9 at South Denver, execution of the major track construction, installation of two new control points, and restoration of the signal system to service.

The reason given for the proposed changes is to perform major track construction.

Rules, Standards, and Instructions Application (RS&I–AP)–No. 1103

Applicants: Consolidated Rail Corporation, Mr. J. F. Noffsinger, Chief Engineer—C&S Assets, 2001 Market Street, P.O. Box 41410, Philadelphia, Pennsylvania 19101–1410.

Connecticut Southern Railroad, Mr. Louis J. Szabo, Assistant General Manager, 191 Park Avenue, East Hartford, Connecticut 06108.

Consolidated Rail Corporation (Conrail) and the Connecticut Southern Railroad jointly seek relief from section 236.566 of the Rules, Standards, and Instructions (49 CFR, Part 236) to the extent that the Connecticut Southern Railroad be permitted to operate non-equipped locomotives, in automatic cab signal territory, between "CP 96", milepost 96.1 and "CP 100.0", milepost 100.0, on the Boston Line, Albany Division of Conrail, near Springfield, Massachusetts, for the following operations:

1. Work trains, wreck trains, and ballast cleaners;

2. Engines moving to and from shops; and

3. Engines used in switching and transfer service, with or without cars, not exceeding 20 mph.

The justification for relief is the acquisition of track by the Connecticut Southern Railroad, and an exemption is

already authorized for the operation of Guilford Transportation Industries non-equipped locomotives over the exact same trackage.

Any interested party desiring to protest the granting of an application shall set forth specifically the grounds upon which the protest is made, and contain a concise statement of the interest of the Protestant in the proceeding. The original and two copies of the protest shall be filed with the Associate Administrator for Safety, FRA, 400 Seventh Street, S.W., Mail Stop 25, Washington, D.C. 20590 within 45 calendar days of the date of publication of this notice. Additionally, one copy of the protest shall be furnished to the applicant at the address listed above.

FRA expects to be able to determine these matters without an oral hearing. However, if a specific request for an oral hearing is accompanied by a showing that the party is unable to adequately present his or her position by written statements, an application may be set for public hearing.

Issued in Washington, D.C. on May 19, 1998.

Grady C. Cothen, Jr.,

Deputy Associate Administrator for Safety Standards and Program Development.

BILLING CODE 4910–06–P

DEPARTMENT OF THE TREASURY

Submission to OMB for Review; Comment Request

May 13, 1998.

The Department of Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding this information collection should be addressed to the OMB reviewer listed and to the Treasury Department Clearance Officer, Department of the Treasury, Room 2110, 1425 New York Avenue, NW., Washington, DC 20220.

DATES: Written comments should be received on or before June 25, 1998 to be assured of consideration.

Internal Revenue Service (IRS)

OMB Number: 1545–1586.

Revenue Procedure Number: Revenue Procedure 98–17.

Type of Review: Extension.

Title: Contributions to Foreign Partnerships Under Section 6038B.

Description: This notice provides simplified reporting for transfers by U.S. persons to foreign partnerships under section 6038B, as amended by the Taxpayer Relief Act of 1997. These reporting requirements can be relied on by transferors not subject to section 6038B to avoid a penalty under section 1494(c).

Respondents: Business or other for-profit, Individuals or households, Not-for-profit institutions.

Estimated Number of Respondents: 500.

Estimated Burden Hours Per Respondent: 30 minutes.

Frequency of Response: Annually.

Estimated Total Reporting Burden: 250 hours.

OMB Number: 1545–1591.

Revenue Procedure Number: Revenue Procedure 98–23.

Type of Review: Extension.

Title: Qualified Subchapter S Trust Conversions to Electing Small Business Trusts.

Description: This revenue procedure provides a method for taxpayers to obtain the Secretary's consent to convert a Qualified Subchapter S Trust (QSST) to an Electing Small Business Trust (ESBT) as well as to convert an ESBT to a QSST.

Respondents: Business or other for-profit.

Estimated Number of Respondents: 2,500.

Estimated Burden Hours Per Respondent: 1 hour.

Frequency of Response: Other (once).

Estimated Total Reporting Burden: 2,500 hours.

OMB Number: 1545–1595.

Revenue Procedure Number: Revenue Procedure 98–25.

Type of Review: Extension.

Title: Automatic Data Processing.

Description: Revenue Procedure 98–25 specifies the basic requirements that the IRS considers to be essential in cases where a taxpayer's records are maintained within an Automatic Data Processing System (ADP).

If machine—sensible records are lost, stolen, destroyed, or materially inaccurate, the Revenue Procedure requires that a taxpayer promptly notify its District Director and submit a plan to replace the affected records. The District Director will notify the taxpayer of any objection(s) to the taxpayer's plan. Also, the Revenue Procedure provides that a taxpayer who maintains machine-sensible records may request to enter into a Record Retention Limitation Agreement (RRLA) with its District Director. The taxpayer's request must identify and describe those records the taxpayer proposes not to retain and explain why those records will not become material to the administration of any internal revenue law. The District Director will notify the taxpayer whether or not the District Director will enter into an RRLA.

Finally, Revenue Procedure 98–25 provides that the District Director may conduct an evaluation of a taxpayer's machine-sensible records and may initiate testing to establish the authenticity, readability, completeness, and integrity of such records.

Respondents: Business or other for-profit, Individuals or households, Not-for-profit institutions, Farms, Federal Government, State, Local or Tribal Government.

Estimated Number of Respondents: 3,000.

Estimated Burden Hours Per Respondent: 40 hours.

Frequency of Response: On occasion.

Estimated Total Reporting Burden: 120,000 hours.

Clearance Officer: Garrick Shear (202) 622–3869, Internal Revenue Service, Room 5571, 1111 Constitution Avenue, NW, Washington, DC 20224.

OMB Reviewer: Alexander T. Hunt (202) 395–7860, Office of Management and Budget, Room 10226, New Executive Office Building, Washington, DC 20503.

Dale A. Morgan,

Departmental Reports Management Officer.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

May 14, 1998.

The Department of Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding this information collection should be addressed to the OMB reviewer listed and to the Treasury Department Clearance Officer, Department of the Treasury, Room 2110, 1425 New York Avenue, NW., Washington, DC 20220.

DATES: Written comments should be received on or before June 25, 1998 to be assured of consideration.

Bureau of Alcohol, Tobacco and Firearms (BATF)

OMB Number: 1512–0007.

Form Number: ATF F 3310.6.
Type of Review: Extension.
Title: Interstate Firearms Shipment Report of Theft/Loss.
Description: This form is part of a voluntary program in which the common carrier and/or shipper report losses or thefts of firearms from interstate shipments. ATF uses this information to ensure that the firearms are entered into the National Crime Information Center, to initiate investigations, and to perfect criminal cases.
Respondents: Business or other for-profit.
Estimated Number of Respondents: 1,014.
Estimated Burden Hours Per Respondent: 20 minutes.
Frequency of Response: On occasion.
Estimated Total Reporting Burden: 338 hours.

OMB Number: 1512–0035.
Form Number: ATF F 5000.21.
Type of Review: Extension.
Title: Referral of Information.
Description: Information services organizations by Federal agencies, State governments. ATF asks the Federal agency or State or local regulatory compliance agency to respond as to any action that will be taken and if so the action planned on referrals of potential violations of Federal, State or local law discovered by ATF personnel during investigations. It is also used to evaluate effectiveness of these referrals.
Respondents: Federal Government, State, Local or Tribal Government.
Estimated Number of Respondents: 500.
Estimated Burden Hours Per Respondent: 1 hour.
Frequency of Response: Other (as necessary).
Estimated Total Reporting Burden: 500 hours.

OMB Number: 1512–0221.
Form Number: ATF F 5640.1.
Type of Review: Extension.
Title: Offer in Compromise of Liability Incurred Under the Provisions of Title 26 U.S.C. Enforced and Administered by the Bureau of Alcohol, Tobacco and Firearms.
Description: ATF F 5640.1 is used by persons who wish to compromise criminal and/or civil penalties for violations to the Internal Revenue Code. If accepted, the offer in compromise is a settlement between the government and the party in violation in lieu of legal proceedings or prosecution. The form identifies the party making the offer, violations, amount of offer and circumstances concerning the violations.
Respondents: Business or other for-profit.
Estimated Number of Respondents: 40.
Estimated Burden Hours Per Respondent: 2 hours.
Frequency of Response: Other (as necessary).
Estimated Total Reporting Burden: 80 hours.

OMB Number: 1512–0242.
Form Number: ATF F 5400.6.
Type of Review: Extension.
Title: User-Limited (Explosives).
Description: The user-limited permit is useful to the person making a one-time purchase from out-of-state. It is used one time only and is nonrenewable. The explosives distributor makes entries on the form and returns the form to the permittee to prevent reuse of the $2 permit.
Respondents: Business or other for-profit.
Estimated Number of Respondents: 1,092.
Estimated Burden Hours Per Respondent: 12 minutes.
Frequency of Response: Other (5 years).
Estimated Total Reporting Burden: 22 hours.

Clearance Officer: Robert N. Hogarth (202) 927–8930, Bureau of Alcohol, Tobacco and Firearms, Room 3200, 650 Massachusetts Avenue, N.W., Washington, DC 20226.
OMB Reviewer: Alexander T. Hunt (202) 395–7860, Office of Management and Budget, Room 10202, New Executive Office Building, Washington, DC 20503.

Land Disposal Restrictions Phase IV: Final Rule Promulgating Treatment Standards for Metal Wastes and Mineral Processing Wastes; Mineral Processing Secondary Materials and Bevill Exclusion Issues; Treatment Standards for Hazardous Soils, and Exclusion of Recycled Wood Preserving Wastewaters

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: This rule promulgates Land Disposal Restrictions treatment standards for metal-bearing wastes, including toxicity characteristic metal wastes, and hazardous wastes from mineral processing. The set of standards being applied to these wastes is the universal treatment standards. These standards are based upon the performance of the Best Demonstrated Available technologies for treating these, or similar, wastes. This rule also revises the universal treatment standards for twelve metal constituents, which means that listed and characteristic wastes containing one or more of these constituents may have to meet different standards than they currently do.

In a related section regarding wastes and secondary materials from mineral processing, EPA is amending the rules to define which secondary materials from mineral processing are considered to be wastes and potentially subject to Land Disposal Restrictions. The intended effect is to encourage safe recycling of mineral processing secondary materials by reducing regulatory obstacles to recycling, while ensuring that hazardous wastes are properly treated and disposed. EPA also is finalizing decisions on a set of mineral processing issues wastes which courts have been remanded to EPA. These include retaining the Toxicity Characteristic Leaching Procedure as the test for identifying the toxicity characteristic for mineral processing wastes, and readdressing the regulatory status of a number of miscellaneous mineral processing wastes.

This rule also amends the LDR treatment standards for soil contaminated with hazardous waste. The purpose of this revision is to create standards which are more technically and environmentally appropriate to contaminated soils than those which currently apply.

Finally, this rule excludes from the definition of solid waste certain shredded circuit boards in recycling operations, as well as certain materials reused in wood preserving operations.

EFFECTIVE DATES: This final rule is effective on August 24, 1998.

Compliance dates:

—For prohibition on underground injection of certain wastes at 40 CFR 148.18: May 26, 2000;

—For definition of solid waste provisions at 40 CFR 261.2, 261.4(a)(15), and 261.4(b): November 27, 1998;

—For exclusion of recycled wood preserving wastewaters at 40 CFR 261.4(a)(9): May 26, 1998;

—For prohibition on land disposal of wastes from elemental phosphorus processing and on mixed radioactive wastes at 40 CFR 268.34(b): May 26, 2000; and

—For land Disposal Restrictions treatment standards at 40 CFR 268.49 for soil contaminated with previously prohibited wastes: May 26, 1998.

ADDRESSES: Supporting materials are available for viewing in the RCRA Information Center (RIC), located at Crystal Gateway I, First Floor, 1235 Jefferson Davis Highway, Arlington, Virginia. The docket information number is F–98–2P4F–FFFFF. The RIC is open from 9 a.m. to 4 p.m., Monday through Friday, excluding federal holidays. To review docket materials, it is recommended that the public make an appointment by calling (703) 603–9230. The public may copy a maximum of 100 pages from any regulatory docket at no charge. Additional copies cost $0.15/page. The index and some supporting materials are available electronically. See the "Supplementary Information" section for information on accessing them.

FOR FURTHER INFORMATION CONTACT: For general information, contact the RCRA Hotline at (800) 424–9346 or TDD (800) 553–7672 (hearing impaired). In the Washington, D.C. metropolitan area, call (703) 412–9810 or TDD (703) 412–3323.

For more detailed information on specific aspects of this rulemaking, contact the Waste Treatment Branch (5302W), Office of Solid Waste (OSW), U.S. Environmental Protection Agency, 401 M Street S.W., Washington, D.C. 20460; phone (703) 308–8434. For information on the issue of treatment standards for metal-bearing wastes, contact Elaine Eby (703) 308–8449 or Anita Cummings at (703) 308–8303. For questions on land disposal restrictions (LDR) treatment standards for mineral processing wastes, radioactive mixed wastes, and grab versus composite sampling methods, contact Anita Cummings at (703) 308–8303. For information on treatment standards for manufactured gas plant wastes, contact Rita Chow at (703) 308–6158. Contact Rhonda Minnick at (703) 308–8771 for information on improvements and corrections to the Land Disposal Restrictions. For information on secondary mineral processing materials and Bevill issues, call Ashley Allen at 703–308–8419 or Stephen Hoffman of the Industrial and Extractive Wastes Branch at (703) 308–8413. For questions on treatment standards for hazardous soil, contact Elizabeth McManus of the Permits and State Programs Division at (703) 308–8657. Contact Stephen Bergman of the Hazardous Waste Identification Division at (703) 308–7262 for questions on the exclusion for wood preserving wastewaters. For information on the capacity analyses, contact Bill Kline at (703) 308–8440 or C. Pan Lee at (703) 308–8478. For questions on the regulatory impact analyses, contact Paul Borst at (703) 308–0481. For other questions, call Sue Slotnick at (703) 308–8462.

SUPPLEMENTARY INFORMATION:

Availability of Rule on the Internet: Please follow these instructions to access the rule: From the World Wide Web (WWW), type http://www.epa.gov/rules and regulations. In addition, several technical background documents contained in the docket supporting this rule will be available on the Internet at http://www.epa.gov/offices and regions/oswer.

I. Introduction to the Phase IV Rule

In the 1984 Hazardous and Solid Waste Amendments (HSWA) to the Resource Conservation and Recovery Act (RCRA), Congress specified that land disposal of hazardous waste is prohibited unless the waste first meets

treatment standards established by EPA or is disposed in units from which there will be no migration of hazardous constituents for as long as the waste remains hazardous. The HSWA amendments require that treatment standards must substantially diminish the toxicity or mobility of hazardous waste, so that short- and long-term threats to human health and the environment are minimized.

Today's Phase IV final rule is the latest in a series of LDR rules that establish treatment standards for wastes identified or listed as hazardous after the date of the 1984 amendments. (See RCRA § 3004(g)(4)). EPA proposed the Phase IV rule in four **Federal Register** notices, and issued three NODAs setting out additional data relevant to this proceeding. In two **Federal Register** notices prior to today's, EPA promulgated various rules proposed in the Phase IV proposals: treatment standards for wood preserving wastes, paperwork reduction, and clarification of treatability variances. Today's final rule promulgates regulations addressing most of the remaining issues discussed in Phase IV proposals and NODAs. The table at the end of this introduction lists references for all the Phase IV Notices, plus others cited frequently in the preamble.

This final Phase IV preamble contains five major, interrelated sections. The first section explains the new land disposal restrictions treatment standards for wastes identified as hazardous because they exhibit the toxicity characteristic for metals (referred to as "TC metal wastes"). The section also revises the universal treatment standards (UTS) for 12 metal constituents in all hazardous wastes. The TC metal wastes will now be required to meet the universal treatment standards as do most other hazardous wastes. The second major preamble section establishes the prohibition on land disposal plus treatment standards for a particular type of newly identified hazardous waste: mineral processing waste that exhibits a characteristic of hazardous waste. The third section addresses additional issues affecting both TC metal wastes and characteristic mineral processing wastes. The fourth section amends the rules defining when secondary materials being recycled are solid wastes. It states that secondary materials from mineral processing which are generated and reclaimed within that industry are not solid wastes unless they are managed in land disposal units before being reclaimed. Such materials are not subject to regulation as hazardous wastes. That part of the preamble also addresses other issues related to mineral processing. The final major preamble section promulgates amended treatment standards for soil that contains hazardous waste or which exhibits a characteristic of hazardous waste.

Today's rule also includes two brief sections on hazardous waste issues unrelated to the major sections. One clarifies that a previously-promulgated exclusion from hazardous waste regulation for recycled shredded circuit boards also applies to whole circuit boards under certain conditions. The other section promulgates an exclusion from RCRA jurisdiction for certain wood preserving wastewaters and spent wood preserving solutions when recycled.

II. Potentially Regulated Entities

Entities potentially regulated by this final rule vary according to the section of the rule. The following table shows the industry categories that may be regulated according to each major section of the rule. The table is not intended to be exhaustive or definitive with respect to every case-specific circumstance. Rather, it is a general guide for readers regarding entities that EPA is now aware could potentially be regulated by this action. Other types of entities not listed in the table could also be regulated, and failure to mention them in the table should not be taken as any type of regulatory determination on the part of the Agency.

TABLE OF ENTITIES POTENTIALLY AFFECTED BY THE PHASE IV FINAL RULE

Section of the rule	Category	Examples of entities potentially affected
LDR treatment standards for TC metal hazardous wastes, characteristic mineral processing wastes, and other metal-bearing wastes.	Generators of Toxicity Characteristic (TC) metal hazardous wastes (D004—D011), characteristic mineral processing waste, or any hazardous waste required to meet the LDR treatment standard for antimony, barium, beryllium, cadmium, chromium, lead, nickel, selenium, silver, thallium, vanadium, or zinc.	Facilities in the following industries: primary mineral processing, chemical manufacturers, pharmaceutical producers, paint producers, manufacturers of motor vehicle parts, blast furnaces and steel mills, metal plating and polishing, and aircraft parts and equipment.
	Facilities that treat and/or dispose of TC metal hazardous wastes, characteristic mineral processing wastes, and other metal-bearing hazardous wastes.	Hazardous waste treatment and disposal facilities.
LDR treatment standards for hazardous soil.	Entities managing hazardous soil	Private or public parties remediating sites containing hazardous soil
Mineral Processing Secondary Materials	Facilities that generate, store, and/or recycle secondary materials from primary mineral processing.	Copper smelters, gold refiners, and other primary metals producers that return wastestreams to units for additional recovery
Exclusion for Recycled Wood Preserving Process Wastewaters.	Wood Preserving Facilities	Facilities that generate and reclaim drippage and wastewaters on-site from the wood processing industry.

III. Revised Land Disposal Restrictions (i.e., Universal Treatment Standards) for Metal Constituents in all Hazardous Wastes, Including Toxic Characteristic Metals

Summary

There are two purposes to today's new treatment standards for metal-containing wastes. First, EPA is revising the numerical standards because new data are available on which to base more accurate standards. Second, EPA is including a new set of wastes in the current treatment standard regime, continuing EPA's efforts to apply the same LDR treatment standards when technically and legally possible. (In a subsequent section of this rule, EPA is expanding the treatment standard regime to include yet another set of wastes. These are characteristic mineral processing wastes that are not currently subject to land disposal restrictions.)

The numerical standards that EPA is revising are the universal treatment standards (UTS) for 12 metal constituents. The new UTS will apply to nonwastewater forms of any listed or characteristic hazardous waste that is already required to meet the UTS for those constituents in the waste. The revised UTS are less stringent for 7 constituents, and more stringent for 5. The rule does not affect the UTS for wastewater forms of these wastes, and does not change the UTS for any other constituents, including any of the organics.

The new set of wastes that EPA is bringing into the current LDR regime is the group of 8 wastes known as TC metal wastes—wastes identified as hazardous because they exhibit the toxicity characteristic due to the presence of the metals enumerated in 261.24 (Waste codes D004–D011). These are wastes that exhibit the toxicity characteristic because of high toxic metal content. By today's rule, that key metal must be treated to the UTS for that metal. Furthermore, any underlying hazardous constituents (UHCs) must be treated to UTS levels as well, whether these UHCs are organics or metals. Both wastewater and nonwastewater forms of the TC metal wastes are affected by today's rule, except for arsenic, for which only the wastewater forms are affected.

Hazardous wastes that exhibit both the TC for metals and the predecessor characteristic based on the Extraction Procedure (EP) are presently only required to be treated to reduce metal levels to below the characteristic level. Today's rule, for the most part, will require additional treatment of these metal constituents before land disposal can occur.

The Agency also finds that the treatment standards established in

today's rule are not established below levels at which threats to human health and the environment are minimized. See *Hazardous Waste Treatment Council v. EPA*, 886 F.2d 355, 362 (D.C. Cir. 1990). That case held that the statute can be read to allow either technology-based or risk-based LDR treatment standards, and further held that technology-based standards are permissible so long as they are not established "beyond the point at which there is no 'threat' to human health or the environment." *Id.* at 362. EPA's finding that today's standards are not below a "minimize threat" level is based on the Agency's inability at the present time to establish concentration levels for hazardous constituents which represent levels at which threats to human health and the environment are minimized. As the Agency has explained a number of times, determining these levels on a national basis—which requires determination of relevant exposure pathways and potential receptors for all hazardous constituents in hazardous wastes, with all the attendant uncertainties involved in such a national determination—has not yet proven possible. See, *e.g.*, 55 FR at 6642 (February 26, 1990). Thus, the Agency continues to find that technology-based standards remain the best approach for the national treatment standards since such standards eliminate as much of the inherent uncertainty of hazardous waste land disposal and so fulfill the Congressional intent in promulgating the land disposal restrictions provisions. *Id.* However, the Agency believes that it may be possible to make valid determinations that threats to human health and the environment are minimized on an individualized basis in the context of certain site-specific remediations, and accordingly has provided in this rule a variance from technology-based treatment requirements for contaminated soils generated in certain remediations. See section VII below.

A. History of Metal Treatment Standards

Land disposal of hazardous wastes is largely prohibited by statute, unless the wastes meet the applicable treatment standards established by EPA prior to land disposal. See RCRA sections 3004(d)–(g), (m); (the exception for no-migration units is not relevant to today's rule). Until today's rule, metals that were characteristic because they failed the Toxicity Characteristic Leaching Procedure (TCLP) and also failed the Extraction Procedure (EP)—which preceded the use of the TCLP as a means of identifying whether a waste exhibited a characteristic of hazardous waste—were subject to treatment standards at levels equal to the TC levels (55 FR 22520, June 1, 1990). (Note that wastes that were characteristic according to the TCLP but did not fail the EP were considered, until promulgation of today's rule, to be newly identified wastes, and were not subject to the LDR requirements. Today's rule makes these wastes subject to LDR). However, the TC levels are typically higher than those treatment levels for which threats posed by land disposal of the wastes are minimized. (*Waste Management v. EPA*, 976 F.2d 2, 13–14, 26–27, 32 (D.C. Cir. 1992). Consequently, treatment to levels lower than the characteristic levels normally is required. *Id.*

In an effort to make treatment standards as uniform as possible while adhering to the fundamental requirement that the standards must minimize threats to human health and the environment, EPA developed the UTS. Under the UTS, whenever technically and legally possible, the Agency adopts the same technology-based numerical limit for a hazardous constituent regardless of the type of hazardous waste in which the constituent is present (see 40 CFR 268.40; and 59 FR 47982, September 19, 1994). In the original Phase IV proposal, EPA proposed to apply the metal UTS, as measured by the TCLP (60 FR 43582, August 22, 1995; see 40 CFR 261.24), to all TC metal wastes. The TCLP measures the possibility that a waste may leach toxic metals above a designated concentration level under certain assumed disposal conditions, and so is a measure of the potential mobility of toxic metals in a waste.

Commenters in response to the original proposal took issue with the Agency's use of data previously used to establish metal UTS as a basis for establishing the treatment standards for characteristic metal wastes. The commenters raised three basic issues with regard to the data transfer. First, they said that characteristic metal wastes are extremely variable and the data used to calculate the treatment standards were not representative of the diversity of TC metal wastes. Second, the commenters said that although two treatment technologies—high temperature metals recovery (HTMR) and stabilization—were determined to be Best Demonstrated Available Technology (BDAT), the current metals UTS were based solely on HTMR, a technology not commercially available for many TC metal wastes. Finally, commenters asserted that individual metal UTS values were not uniformly achievable when waste streams with multiple toxic metals were being treated. In light of these concerns, the commenters urged the Agency to obtain additional data that would demonstrate the effectiveness of stabilization on TC metal waste streams and more fully characterize the diversity of treatment of these nonwastewaters. The following commenters provided the Agency with stabilization performance data: Battery Council International, American Foundrymen's Association, Chemical Waste Management, and the Environmental Treatment Council. While extensive, the data unfortunately was based on composite samples and could not be used as the basis for treatment standards (see USEPA, Final Best Demonstrated Available Technology (BDAT) Background Document for Quality Assurance/ Quality Control Procedures and Methodology, Office of Solid Waste, October 23, 1991 and 62 FR 26041 for a discussion of grab and composite sampling).

The Agency, however, was convinced that additional data were needed to further assess the treatment of TC metal nonwastewaters. During September 1996, EPA conducted site visits at three hazardous waste treatment facilities and collected additional treatment performance data. One facility was a large commercial TSDF that employed conventional stabilization techniques to treat a wide array of inorganic metal wastes. Another was an on-site treatment facility that focused on the stabilization of inorganic metal slag. A third facility was commercial and focused on stabilization of inorganic materials using non-conventional stabilization techniques. During these site visits, the Agency either gathered performance data from company records or requested the collection of actual treatment performance data through sampling and analysis.

Treatment data were collected for the following types of hazardous waste: mineral processing waste, baghouse dust, battery slag, soils, pot solids, recycling by-products, and sludge. See the memorandum, Final Revised Calculation of Treatment Standards Using Data Obtained From Rollins Environmental's Highway 36 Commercial Waste Treatment Facility and GNB's Frisco, Texas Waste Treatment Facility, March 10, 1997 and the memorandum, Transferability of UTS to Mineral Processing Wastes, January 28, 1997 for a complete description of the waste constituents and concentrations. Most of the wastes contained multiple metals in various concentrations while some had

significant concentrations of typically two metal combinations, including lead and cadmium, barium and lead, and chromium and antimony. In addition, between October 1994 and December 1995, the Agency obtained performance data from one HTMR facility; (other HTMR data became available very late in 1997). The assessment of the new data sets began with the calculation of treatment standards for each of the two data sets representing stabilization and HTMR. The same methodology, sometimes called "C 99," and used in past LDR rulemakings, was used to calculate the treatment levels (see 56 FR 41164, August 18, 1991, and the BDAT Background Document for K061, dated August, 1991). Next, the Agency compared the treatment levels for stabilization verses HTMR. Based on this comparison, the Agency selected the highest level for each metal as the proposed UTS to allow for waste and process variability and detection limit difficulties. This approach is consistent with the legislative goal of providing substantial treatment through standards that are achievable by an array of well-performing, available treatment technologies. See 130 Cong. Rec. S 9184 (Daily ed., July 25, 1984) (statement of Senator Chafee).

As a result, the Agency issued a Second Supplemental Proposal on May 12, 1997 (62 FR 26041). In it, EPA proposed to change the numerical limits for all nonwastewater wastes containing the following metal constituents: antimony, barium, beryllium, cadmium, chromium, lead, nickel, selenium, silver, and thallium. (62 FR at 26047, May 12, 1997). The Agency also reproposed to change the numerical limits for vanadium in P119 and P120 nonwastewaters, and for zinc in K061 nonwastewaters. (62 FR at 26047, May 12, 1997). EPA also proposed these same UTS treatment standards for TC metal wastes identified as hazardous due to concentrations of barium, cadmium, chromium, lead, selenium and silver.

The Agency would like to correct in today's rule a prior error that was discovered in calculating the metals treatment levels using the HTMR treatment data. As previously stated, in the Second Supplemental and in today's preamble, in determining the treatment levels for each metal constituent, the Agency compared the treatment standards calculated with data from HTMR and stabilization. Based on this comparison, the highest level for each metal was chosen as the treatment standard. In reviewing the calculations from the HTMR data set, the Agency discovered an error in the calculations. When applying the methodology presented in USEPA, "Final Best Demonstrated Technology (BDAT) Background Document for Quality Assurance/Quality Control Procedures and Methodology," dated October 23, 1991, it was discovered that the Agency failed to conduct a "Z-score test" to remove any outliers—data that is either so high or so low that it is not considered to be representative of the population from which the data are drawn. EPA uses this statistical method to confirm that certain data do not represent treatment by a well-operated system, or reflect anomalously low levels which are not typically achievable. This error was found to have occurred only in the calculation of the treatment standards based on the performance of HTMR; the treatment standards based on the performance of stabilization were properly calculated. The proposed treatment standards for cadmium, chromium, nickel, and silver were affected. The application of the Z-score outlier test resulted in 2 data points out of 40 being eliminated as outliers for both cadmium and chromium. For nickel, 5 out of 122 data points were identified as outliers.

For silver, 3 out of 114 data points were identified as outliers. Three of the resulting, calculated treatment standards changed slightly and are slightly more stringent than the proposed standards: cadmium from proposed 0.20 to corrected 0.11 mg/L TCLP; chromium from proposed 0.85 to corrected 0.60 mg/L TCLP; and nickel from proposed 13.6 to corrected 11 mg/L TCLP. Silver, on the other hand, changed from the proposed 0.11 mg/L TCLP to a corrected, slightly less stringent 0.14 mg/L TCLP. (Note: In re-calculating this standard, the Agency added an additional 74 data points which were submitted by the INMETCO Company (a high temperature metal reclaimer) in their comments to the May 12 supplemental proposal.) The Agency believes that these re-calculations are not significant because these four revised standards are each still achievable. See Memorandum, "Calculation of Universal Treatment Standard (UTS) for HTMR Residues Using Data Submitted by Horsehead Research Development (HRD) Co., Inc. And INMETCO," December 17, 1997.

B. Applicability of Metal Treatment Standards

As noted earlier, today's rule finalizes LDR treatment standards in two ways. First, it revises the UTS levels for 10 metal constituents in nonwastewater forms of hazardous wastes. The 10 include antimony, barium, beryllium, cadmium, chromium, lead, nickel, selenium, silver, and thallium. These treatment standards will replace the existing UTS values. In addition, EPA is applying UTS for the first time to 8 TC metal wastes: arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver. The UTS apply to both wastewater and nonwastewater forms of the wastes (except for TC arsenic wastes, for which the UTS apply to wastewater forms only), and to both organic and metal underlying hazardous constituents in them. No TC metal wastes have had to meet standards for underlying hazardous constituents before today, and wastes exhibiting only the TC and not the EP were not yet prohibited. (Note, some subcategories of mercury and arsenic TC metal wastes have treatment methods requiring use of a specified technology, and are not affected by today's rule.) The Agency is also adjusting the treatment standards for vanadium in P019 and P020 nonwastewaters as well as zinc in K061 nonwastewaters.

The metal treatment standards being promulgated today have broad applicability. They apply to the following metal-containing hazardous wastes: (1) characteristic metal wastes, including both the newly identified wastes that, heretofore, were not prohibited from land disposal; and metal wastes that were identified as hazardous under the predecessor leaching protocol, the Extraction Procedure (EP), which remain hazardous because they also exhibit the TC by the TCLP; (2) mineral processing wastes which exhibit the toxicity characteristic for metal (this is actually a subset of wastes in (1) above); (3) listed hazardous wastes which have metal constituents; (4) underlying hazardous constituents (UHCs) that are metals in any characteristic hazardous waste (including mineral processing waste which exhibit a characteristic) that is disposed in other than a Clean Water Act (CWA) or CWA-equivalent wastewater treatment system (see 40 CFR 268.2(i); 59 FR 47982, September 19, 1994); and (5) radioactive wastes mixed with the wastes mentioned in (1)–(4) above.

C. Development of New Treatment Standards for Hazardous Wastes Containing Metals

1. Measuring Compliance by Grab or Composite Sampling

As explained in the May 12, 1997 Second Supplemental Phase IV proposal, EPA establishes treatment standards using data obtained by grab sampling, not composite sampling, and

likewise assesses compliance with these standards using grab sampling. 62 FR at 26047. This approach was sustained by the D.C. Circuit Court of Appeals in *Chemical Waste Management v. EPA*, 976 F. 2d at 34, and EPA did not and is not reopening the issue in this proceeding. The Agency has now obtained requisite grab sampling data. As a result, the treatment standards promulgated in this rule are all based upon treatment performance that was measured through the use of grab sampling. All compliance likewise will be based on grab sampling.

2. Development of Treatment Standards for Metal Wastes

All of the metals described below are on the UTS list and some are also TC metals. This section discusses development of both the TC and UTS treatment standard levels. The Agency is presenting the metal treatment standards alphabetically by constituent. Depending on the constituent, one or more treatment standards is discussed. For example in the section entitled, "Treatment Standards for Barium Waste," the Agency discusses the promulgation of three treatment standards: (1) 21 mg/L TCLP for nonwastewater forms of D005 waste (based on the UTS); (2) 1.2 mg/L for wastewater forms of D005 waste (also based on the UTS); and (3) a revised UTS of 21 mg/L TCLP for barium nonwastewaters. If a metal constituent is not one of the TC metals, its presence cannot be the basis for determining if a waste exhibits the toxicity characteristic—but it could be an underlying hazardous constituent in the waste, in which case that constituent would need to meet the standard for that metal in today's rule before the waste could be land disposed.

a. Final Universal Treatment Standard for Nonwastewater Forms of Antimony. The Agency proposed in the Second Supplemental (62 FR 26041, May 12, 1997), to change the UTS for nonwastewaters containing antimony from 2.1 mg/L TCLP to 0.07 mg/L TCLP. This proposed change was a result of new data collection efforts conducted by the Agency to gather performance data that was representative of the diversity of metal-containing wastes.

In response, the Agency received several comments. Two commenters supported the proposed change; however the remaining commenters argued against the proposed level for antimony of 0.07 mg/L TCLP for a number of reasons. One commercial waste management facility stated that very few of the waste streams they treat using conventional stabilization techniques, including furnace ash, incinerator ash, scrubber brine sludge, furnace baghouse dust, and stripper rinse waters, would meet the proposed standard. The commenter submitted 48 data points supporting its claim. A third commenter stated that meeting the standard would significantly increase their compliance costs. Another stated that commercial stabilization techniques were not capable of meeting the proposed UTS for antimony. In general, these commenters suggested a higher UTS for antimony in the range of 1.3 mg/L TCLP to 2.98 mg/L TCLP.

In response to the commenters' concerns regarding the difficulty in treating antimony wastes, the Agency has conducted a thorough review of its BDAT data set and has determined that while it represents a diverse collection of waste streams containing metals, the concentration of antimony in the 9 data points used to calculate the proposed standard may not be representative of the most difficult to treat antimony waste. The data used by the Agency to calculate the proposed UTS of 0.07 mg/L TCLP, showed a range of antimony concentrations in the untreated waste of between 0.2440 mg/L TCLP and 16.1 mg/L TCLP. While the Agency, at the time, believed that these data were sufficient to establish a treatment standard, new data submitted by a commercial hazardous waste treatment facility provide a compelling argument to amend this standard. The new data consist of 48 additional data points representing various multiple metal waste streams, including incinerator or furnace ash, scrubber brine sludge, lab pack waste, stripper rinse water and baghouse dust. These wastes have all been treated with conventional stabilization techniques and meet the proposed UTS values for all metal constituents except for antimony. The Agency has reviewed the data, the treatment technology, and the QA/QC information submitted by the commenter and believes that the data should be incorporated into the existing BDAT data set. After doing so, the Agency recalculated the treatment standard for antimony nonwastewaters and is today promulgating a revised standard of 1.15 mg/L TCLP. All data available to the Agency indicate that the revised treatment standard for antimony nonwastewaters can be achieved by either stabilization or HTMR processes and addresses the commenter's concerns.

b. Treatment Standard for Wastewater Forms of Arsenic Waste. The Agency proposed in the original Phase IV proposal (60 FR 43683, August 22, 1995), to change the treatment standard for wastewater forms of toxicity characteristic arsenic (D004) waste from the characteristic level of 5.0 mg/L established in the Third Third rule (55 FR 22520 June 1, 1990) to the previously promulgated UTS for arsenic wastewaters of 1.4 mg/L. The Agency did not propose to change the treatment standard for nonwastewater forms of toxicity characteristic arsenic (D004) waste in that the UTS of 5.0 mg/L TCLP was the same as the TC level. The Agency received no comment on the proposed change to D004 wastewaters. Therefore, the Agency is today promulgating as proposed the UTS standard of 1.4 mg/L for D004 wastewaters.

c. Treatment Standards for Barium Waste. (i) Treatment standards for TC Barium (D005) Waste. In 60 FR 43684 (August 22, 1995), EPA proposed to change the treatment standards for wastewater forms of TC metal barium waste (D005) from the characteristic level of 100 mg/L (established in the Third Third rule, 55 FR 22520, June 1, 1990) to the previously promulgated UTS for barium of 1.2 mg/L. Likewise, EPA proposed for D005 nonwastewaters a change from the characteristic level of 100 mg/L TCLP (55 FR 22520, June 1, 1990) to the previously promulgated UTS of 7.6 mg/L TCLP. In support of these revised treatment standards, the Agency had performed a comprehensive re-evaluation of the available treatment performance data from wastes containing significant concentrations of barium.

For D005 wastewaters, the Agency determined that the existing UTS level for barium (1.2 mg/L) was appropriate, based on the performance of lime conditioning followed by sedimentation and filtration as BDAT. For D005 nonwastewaters, the Agency determined that the existing UTS level of 7.6 mg/L TCLP, based on treatment of barium in K061 (electric arc furnace dust) using HTMR was also appropriate. The Agency believed that these treatment standards could be routinely met by industry. Additionally, the Agency reviewed stabilization data and determined that the treatment standards for barium could be achieved by stabilization for a wide variety of waste matrices. (See Proposed Best Demonstrated Available Technology (BDAT) Background Document for Toxicity Characteristic Metal Wastes D004–D011, July 26, 1995.)

The Agency received no significant comment on the proposed change to the wastewater standard for D005. However, as previously discussed in Section III.A of today's rule, new data collection efforts and new analysis of BDAT data

for nonwastewaters resulted in a reproposal of the barium treatment standard in the Phase IV Second Supplement (62 FR 26047) . In this notice, the Agency proposed to revise the treatment standard for barium nonwastewaters to 21 mg/L TCLP based on stabilization. The Agency received no comments in response to the reproposal. Therefore, the Agency today is promulgating a nonwastewater treatment standard of 21 mg/L TCLP as proposed in 62 FR 26041. In addition, the treatment standard of 1.2 mg/L for wastewater forms of D005 is promulgated as proposed in 60 FR 43654.

(ii) Universal Treatment Standard (UTS) for Barium Nonwastewaters. (Please refer to the discussion above about the development of the treatment standard for D005 for additional information on the development of the barium UTS levels.) The Agency proposed to change the UTS for barium nonwastewaters from 7.6 mg/L to 21 mg/L TCLP (see 62 FR 26041). It was proposed that such a treatment standard would better reflect the diversity of metal-containing waste streams and their treatment.

The Agency received no significant comment in response to the reproposal. Therefore, the Agency is today promulgating a nonwastewater UTS of 21 mg/L TCLP, as proposed.

d. Final Universal Treatment Standard for Nonwastewater Forms of Beryllium Waste. The Agency proposed in the original Phase IV proposal (60 FR 43683, August 22, 1995), to revise the UTS for nonwastewaters containing beryllium from 0.014 mg/L TCLP to 0.04 mg/L TCLP. As previously discussed, new data collection efforts and new analysis of BDAT data resulted in a reproposal of the beryllium treatment standard to 0.02 mg/L TCLP in the Phase IV Second Supplemental (62 FR 26041, May 12, 1997).

The Agency received numerous comments on the proposed revision. One commenter supported the proposed treatment level for beryllium, but stated that current stabilization technologies could achieve lower treatment levels. Several other commenters stated that while the proposed standard for beryllium was consistent with the data considered by the Agency, the stabilization data for beryllium were quite limited and reflected the treatment of wastes having very low beryllium content. Commenters further questioned whether the proposed standard of 0.02 mg/L TCLP could be met by conventional stabilization techniques if higher concentrations of beryllium were treated. Other commenters stated that they could not support the treatment standards because EPA has not demonstrated that existing commercial technologies were capable of achieving the proposed standards or that technologies were otherwise available.

In light of the comments received, the Agency conducted a review of the data set used to calculate the proposed standard. The review indicated that, consistent with the commenter's concerns, the data used by the Agency to calculate the standard were based on wastes containing low concentrations of beryllium (between 0.0050 and 0.5 mg/L TCLP). These concentration levels and the subsequent treatment standard developed from them does not appear to adequately account for the difficulty in treating wastes containing higher concentrations of beryllium. Data generated and submitted by Brush Wellman, Inc., consisting of seven data points, showed characteristic wastes (D008) with concentrations of beryllium ranging from 32 to 95 mg/L TCLP. When treated with conventional stabilization techniques, treatment resulted in beryllium levels ranging from 0.05 mg/L to 0.31 mg/L TCLP. As a result of these data, the proposed UTS for beryllium must be revised to reflect a more difficult-to-treat or high-concentration beryllium waste. Accordingly, the Agency is today promulgating a revised UTS for beryllium nonwastewaters of 1.22 mg/L based on this newly acquired data. All treatment performance data available to the Agency indicates that this revised treatment standard can be met, thereby addressing concerns raised by the commenters to the proposal. It should be noted that the UTS for beryllium wastewaters remains unchanged at 0.82 mg/L.

e. Treatment Standards for Cadmium Wastes. (i) Treatment standards for TC Cadmium (D006) Waste. The Agency proposed to change the treatment standards for wastewater forms of TC cadmium (D006) waste from the characteristic level of 1.0 mg/L (established in the Third Third rule (55 FR 22520. June 1, 1990) to the previously promulgated UTS for cadmium wastewaters of 0.69 mg/L. EPA also proposed to change the treatment standard for D006 nonwastewaters from the characteristic level of 1.0 mg/L TCLP (55 FR 22520 (June 1,1990)) to the previously promulgated UTS for cadmium nonwastewaters of 0.19 mg/L TCLP. In support of these revised treatment standards, the Agency had performed a comprehensive re-evaluation of the available treatment performance data from wastes containing significant concentrations of cadmium.

For D006 wastewaters, the Agency determined that the existing UTS for cadmium (0.69 mg/L) based on a BDAT of lime conditioning followed by sedimentation was appropriate. The treatment standard for nonwastewater forms of D006 wastes was based on a transfer from the UTS for cadmium of 0.19 mg/L TCLP based on the K061–HTMR treatment standard data. The Agency chose to use these data because they represented performance of an HTMR treatment unit. The UTS based on K061–HTMR could be routinely met by industry. Additionally the Agency reviewed stabilization performance data and determined that the UTS for cadmium could be achieved by stabilization for a wide variety of waste matrices. See Proposed Best Demonstrated Available Technology (BDAT) Background Document for Toxicity Characteristic Metal Waste D004–D011 (July 26, 1995).

The Agency received no comments on the proposed change to the wastewater standard for D006. However, for reasons previously discussed in Section III.A of today's preamble, the Agency in the Phase IV Second Supplemental proposed to revise the treatment standard for cadmium nonwastewaters to 0.20 mg/L TCLP based on HTMR.

All comments received in response to the revised standard for cadmium supported the change. However, as discussed earlier in Section III.A of today's preamble, the Agency discovered an error in the calculation of the treatment standard. In applying the LDR methodology for calculating a treatment standard, the Agency failed to conduct a "Z-score" outlier test. With the application of this test, 2 out of the 40 data points were determined to be outliers, resulting in a revised treatment standard for cadmium nonwastewaters of 0.11 mg/L TCLP. (The proposed treatment standard of 0.20 mg/L TCLP was based on all 40 data points.) The Agency has reviewed the comments in light of this amended treatment standard and believes that it can be achieved by both HTMR and stabilization treatment. Data submitted by commenters in support of this rule does clearly indicate that the standard can be achieved. See supporting information contained in docket for this rule. Therefore, the Agency is today promulgating a nonwastewater treatment standard of 0.11 mg/L TCLP for D006. In addition, the treatment standard of 0.69 mg/L for wastewater forms of D006 waste is being promulgated as proposed in 60 FR 43654.

(ii) Universal Treatment Standard (UTS) for Nonwastewaters Containing Cadmium. The reader is referred to the above discussion about the development of the treatment standard for D006 nonwastewaters for additional information of the development of the UTS level for cadmium nonwastewaters. EPA is promulgating an UTS of 0.11 mg/L TCLP for nonwastewaters containing cadmium. No change was proposed for the cadmium wastewater UTS; therefore it remains at 0.69 mg/L.

f. Treatment Standards for Chromium Wastes. (i) Treatment Standards for TC Chromium Wastes (D007). In 60 FR 43654 (August 22, 1995), the Agency proposed to change the treatment standards for wastewater forms of toxicity characteristic chromium (D007) waste from the characteristic level of 5.0 mg/L (established in the Third Third rule (55 FR 22520. June 1, 1990) to the previously promulgated UTS for chromium (total) wastewaters of 2.77 mg/L. EPA also proposed to change the treatment standards for D007 nonwastewaters from the characteristic level of 5.0 mg/L TCLP (55 FR 22520, June 1,1990) (a standard remanded by the D.C. Circuit as insufficiently stringent in *Chemical Waste Management v. EPA*, 976 F. 2d at 32) to the previously promulgated UTS for nonwastewater forms of chromium (total) of 0.86 mg/L TCLP. In support of these revised standards, the Agency had performed a comprehensive re-evaluation of the available treatment performance data from wastes containing significant concentrations of chromium.

For D007 wastewaters, the Agency determined that the existing UTS (2.77 mg/L) based on a BDAT of lime conditioning followed by sedimentation was appropriate. The treatment standard for D007 nonwastewaters was based on a transfer from the UTS for chromium (total) of 0.86 mg/L TCLP based on the K061–HTMR treatment standard data. In addition, the Agency reviewed stabilization performance data and determined that the UTS for chromium (total) could be achieved by stabilization for a wide variety of waste matrices. See Proposed Best Demonstrated Available Technology (BDAT) Background Document for Toxicity Characteristic Wastes D004–D011, July 26, 1995.

The Agency received no comments on the proposed change to the wastewater standard for D007. However, as previously discussed in Section III.A of today's preamble, new data collection efforts and further analysis of BDAT data, resulted in a proposed revision to the treatment standard for nonwastewater containing chromium to 0.85 mg/L TCLP based on a BDAT of stabilization (62 FR 26041).

In response to the reproposal, the Agency received no significant comments. However, as discussed earlier in Section III.A of today's preamble, the Agency discovered an error in the calculation of the treatment standard. In applying the LDR methodology for calculating a treatment standard, the Agency failed to conduct a "Z-score" outlier test. With the application of this test, 2 out of the 40 data points, originally used to calculate the standard, were determined to be outliers, resulting in a revised treatment standard for chromium nonwastewaters of 0.60 mg/L TCLP. The Agency has reviewed the comments in light of this amended standard and believes that it can be achieved by both HTMR and stabilization technologies. Data submitted by commenters in response to this proposal also support this conclusion. See supporting information contained in the docket for this rule. Therefore, the Agency is today promulgating an amended nonwastewater treatment standard of 0.60 mg/L TCLP. In addition, EPA is also promulgating a treatment standard of 2.77 mg/L for wastewater forms of D007 as proposed in 60 FR 43654.

(ii) Universal Treatment Standard (UTS) for Chromium Nonwastewaters. (Please refer to the discussion above about the development of the treatment standard for D007 for additional information on the development of the chromium UTS levels.) The Agency proposed to change the UTS for chromium (total) nonwastewaters to 0.85 mg/L TCLP to better reflect the diversity of metal-containing waste streams and their treatment (see 62 FR 26041). No change was proposed for the chromium wastewater UTS.

The Agency received no significant comments on the reproposal. However, as a result of an error in the calculation of the proposed treatment standard, as previously discussed, the Agency is today promulgating a revised chromium nonwastewater UTS of 0.60 mg/L TCLP. The chromium wastewater UTS remains unchanged at 2.77 mg/L.

g. Final Treatment Standards for Lead Wastes. (i) Treatment standards for TC Lead Wastes (D008). In 60 FR 43654 (August 22, 1995), the Agency proposed to change the treatment standards for wastewater forms of toxicity characteristic lead (D008) waste from the characteristic level of 5.0 mg/L established in the Third Third rule (55 FR 22520, June 1, 1990) to the previously promulgated UTS for lead wastewaters of 0.69 mg/L. EPA also proposed to change the treatment standard for D008 nonwastewaters from the characteristic level of 5.0 mg/L TCLP (55 FR 22520, June 1, 1990) (a standard remanded by the D.C. Circuit as insufficiently stringent in *Chemical Waste Management v. EPA*, 976 F. 2d at 27) to the previously promulgated UTS for lead nonwastewaters of 0.37 mg/L TCLP. In support of these revised treatment standards, the Agency had performed a comprehensive re-evaluation of the available treatment performance data from wastes containing significant concentrations of lead.

For D008 wastewaters, the Agency determined that the existing UTS for lead (0.69 mg/L) based on a BDAT of lime conditioning followed by sedimentation was appropriate. The treatment standard for nonwastewater forms of D008 waste was based on a transfer from the UTS for lead of 0.37 mg/L TCLP, which in turn, was based on K061–HTMR treatment standard data. The Agency believed that the UTS could be routinely met by industry using HTMR. Additionally, the Agency reviewed stabilization performance data and determined that the UTS for lead could also be achieved by stabilization for a wide variety of waste matrices. See Proposed Best Demonstrated Available Technology (BDAT) Background Document for Toxicity Characteristic Metal Wastes D004–D011, July 26, 1995.

The Agency did not receive any comments on the proposed change for D008 wastewaters. However as previously discussed in today's preamble, numerous comments on the proposed nonwastewater treatment standard were submitted. As a result, the Agency in the Phase IV Second Supplemental proposed to change the D008 nonwastewater standard to 0.75 mg/L TCLP based on new BDAT stabilization data (62 FR 26047) collected by the Agency. The Agency felt that these data better reflected the diversity of lead-containing waste streams and their treatment.

Numerous commenters concurred with the Agency's reproposal. However, other commenters, specifically those representing various sectors of the secondary lead industry, argued that EPA's proposed treatment standard for lead was not achievable. In particular, comments from Battery Council International (BCI) and the Association of Battery Recyclers (ABR) argued that new data developed by their association members showed that no facility in the secondary lead industry could meet EPA's proposed treatment standard for lead. Instead, they supported setting a treatment standard of 8.39 mg/L TCLP for D008 nonwastewaters based on

stabilization. The commenters argued that smelter slag has chemical and physical characteristics distinctly different from the wastes used to develop the treatment standard and that because of its physical variability, treatment of secondary smelter slag through stabilization was much less effective than other types of D008 wastes. The commenter further questioned EPA's decision to ignore data submitted by BCI, ABR and others in response to the original Phase IV proposal, stating that these data were much more comprehensive and representative. The commenter stated that these data contained 276 composite data points for lead from secondary smelter slag, with a 99th percentile confidence interval for stabilized slag of 2.97 mg/L TCLP. Another commenter, which uses a chemical fixation process on the generated blast furnace slag, argued that they could only meet a 2.0 mg/L TCLP for lead, based on composite rather than grab sampling.

In response to the commenters' concerns, the Agency would first like to respond to the commenters' statement that data previously submitted to the Agency was ignored. The Agency is careful to review and analyze all data that are submitted in support or response to its rulemakings. In fact, the referenced data were analyzed extensively, but were found to be so seriously lacking in form and quality assurance/quality control prerequisites that it was impossible to use them for BDAT development. (In the docket for this rule see the documents, "Draft—Overview of Five Data Sets Submitted in Response to the Land Disposal Restrictions Phase IV Proposed Rule: Treatment of Metals," November 1996; and correspondence from Michael Petruska, USEPA to David B. Weinberg, Battery Council International Re: Request for Additional Data in Support of the Previous Submitted Data in Response to the Land Disposal Restriction Phase IV," July 22, 1996). Specifically, the data submitted to the Agency were (1) based on composite samples rather than grab samples, the latter being the only type used to develop treatment standards; (2) lacking in any quality assurance/quality control (QA/QC) documentation; and (3) not accompanied with specific treatment information, or any indication that performance of the treatment process was in fact optimized. As such, the Agency was unable to utilize these data.

Other additional data were subsequently submitted by the commenter in response to the "Second Supplemental" and analyzed by the Agency. These data were based on grab sampling, but there were no specifics on the type of stabilization treatment conducted on the waste. The data does indicate that secondary smelter slags can be treated to meet today's treatment standards for all metals except lead and thallium. With respect to lead, approximately 24 out of 83 samples have treated lead values greater than 0.75 mg/L TCLP, but less than the characteristic level of 5.0 mg/L TCLP. No information was provided for the majority of the thallium data sets. Based on these data, the commenter proposed a treatment standard of 8.39 mg/L TCLP for lead nonwastewaters and 0.79 mg/L TCLP for thallium nonwastewaters. However, these data failed to show effective treatment of the thallium and lead constituents. (In the docket for this rule, see memorandum to Nick Vizzone, USEPA from Howard Finkel of ICF, "Calculation of Universal Treatment Standard (UTS) for Stabilized Secondary Lead Slag Using Data Submitted by the Battery Council International and Association of Battery Recyclers," December 5, 1997).

Commenters have failed to provide reliable and convincing data or information to persuade the Agency that stabilization can not meet the proposed treatment standard of 0.75 mg/L TCLP for lead slags. While the physical variability of the slag may indeed affect treatment performance, the Agency is unconvinced that the commenter's data were the result of optimized treatment conditions and, therefore, are not indicative of true treatment difficulties. EPA's own performance data from treatment of D008 battery slags (which were used in part for the calculation of the treatment standard) clearly support the view that slags from secondary battery recyclers can be treated to meet the nonwastewater standard of 0.75 mg/L TCLP. These data indicate that slags with lead concentrations ranging from 5 to 846 mg/L TCLP (a range similar to that associated with the data submitted in response to the May 12 Second Supplemental proposal and which are discussed above) can be treated with stabilization techniques to levels less than 0.01 mg/L to 0.3 mg/L TCLP. Furthermore, data and information available to the Agency suggest that with optimized treatment these standards should be achievable regardless of the waste matrix. (See "Treatment Technology Background Document", January 1991, for a discussion of Waste Characteristics Affecting Performance (WCAPS and other pertinent material). As such, the Agency is unpersuaded by the commenter's arguments and is today promulgating as proposed a treatment standard of 0.75 mg/L TCLP for D008 nonwastewaters and a standard of 0.69 mg/L for D008 wastewaters. The Agency notes that if a particular waste is unique or possesses properties making it unusually difficult to treat by the treatment technologies whose performance was used to develop the treatment standard, the affected party may petition the Agency, on a case-by-case basis, for a treatment variance as provided in 40 CFR 268.44.

(ii) Final Universal Treatment Standard (UTS) for Nonwastewaters Containing Lead. (Please refer to the discussion above about the development of the treatment standard for D008 for additional information on the development of the lead UTS levels.) The Agency proposed to change the UTS for lead nonwastewaters from 0.37 mg/L TCLP to 0.75 mg/L TCLP to better reflect the diversity of metal-containing waste streams and their treatment (see 62 FR 26041). In response to the proposed revision, the Agency did receive a number of comments on the nonwastewater level, discussed above. For reasons also discussed above, the Agency is today promulgating a lead nonwastewater UTS of 0.75 mg/L TCLP as proposed.

(iii) Secondary Smelter Battery Slag—Additional Issue. EPA published a Notice of Data Availability (NODA) on May 10, 1996 (61 FR 21419) that discussed, among other things, an issue regarding application of the LDR standards to slags resulting from the smelting of lead acid batteries. The LDR treatment standard, established in the Third Third Rule in 1990, for lead acid batteries is RLEAD (see 40 CFR 268.40 and 268.42, Table 1), which means recovery of lead. The NODA stated that "[o]nce the batteries are smelted, the LDR requirements have been satisfied, and, therefore, the slag resulting from this smelting need not be treated further. The standards proposed under Phase IV (i.e., compliance with UTS) would not apply to this slag, even if the slag exhibits a characteristic of hazardous waste (i.e., contains lead in amounts greater than 5.0 mg/L)." This position was based on EPA's usual interpretation that "when EPA specifies a treatment method as the treatment standard, residues resulting from the required treatment method are no longer prohibited from land disposal *unless EPA should otherwise specify*." (emphasis added) 55 FR at 22538 (June 1, 1990).

After the publication of the May 10, 1996 NODA, EPA realized that it had, in fact, "otherwise specified" that lead • slags resulting from the smelting of lead

acid batteries would be a separate treatability group in the Third Third rule, and they would indeed require further treatment if the slags exceeded the TC for lead (5.0 mg/L) as generated. See 55 FR at 22568 (June 1, 1990). The Third Third rule states that "The residuals from the recovery process are a new treatability group (i.e., the residues are not lead acid batteries) and, therefore, their status as prohibited or nonprohibited is determined at the point the residues are generated. Such residues would thus only be prohibited and therefore require further treatment if they exhibit a characteristic." This point was clarified both in person and in a letter, dated July 31, 1996, sent to representatives of Battery Council International. The letter explained that the Agency had mischaracterized the status of lead slags in the May 10, 1996 NODA and requested comment on the appropriate treatment standard for these lead slags.

EPA published the Phase IV Second Supplemental Proposed Rule on May 12, 1997, and among other things, used new data from the treatment of lead slags in revising the treatment standards for lead. In response to this issue, one commenter stated that EPA was prohibited under RCRA 3004(m) from requiring further treatment for residuals that resulted from a treatment process that was determined to be BDAT (such as RLEAD). The commenter believes RCRA 3004(m) states that once threats are minimized, EPA cannot require further treatment of the residuals after the specified BDAT treatment has been performed on the waste, or the BDAT numerical level has been achieved. Because the Agency's data on lead slag residuals show concentrations of 283 mg/L TCLP lead are not uncommon, potential threats from treated lead slag (using RLEAD only) are clearly not minimized. In fact, the concentrations of lead in these residuals resulting from RLEAD of lead acid batteries are among the most concentrated TC lead wastes for which the Agency has data. The Agency only is requiring further treatment of slag residuals which exhibit the characteristic for lead (i.e., contain lead in amounts greater than the TC level of 5.0 mg/l). Those residuals, by definition, are still hazardous and potential threats posed by their land disposal have not been minimized.

Another commenter raised the issue of whether there had been adequate notice and comment given regarding the status of lead slag residuals. The Agency believes that adequate notice and opportunity to comment were given in light of the facts recited. We note also that all comments received on the Phase IV second supplemental rule regarding lead slag residuals took issue with the treatment standard for lead and the data used to develop the standard, but did not question that the slags could be required to be treated further. Commenters appeared to clearly understand that slags are covered by the Phase IV rule establishing standards for TC lead wastes.

Therefore, lead slag residuals resulting from the smelting of lead acid batteries are included under today's rulemaking. If such residuals exhibit a lead toxicity characteristic (i.e., have lead levels exceeding 5.0 mg/L) after RLEAD is employed, they would have to be treated again for lead and any other underlying hazardous constituents present in waste until the treatment standards are achieved. For a discussion on the development of these numerical standards being promulgated today; see the discussion in section (i) above.

(iv) Addition of Iron Filings to Stabilize Lead-Containing Wastes. Today, the Agency is codifying the principle that the addition of iron metal, in the form of fines, filings, or dust, for the purpose of ostensibly achieving a treatment standard for lead is "impermissible dilution" under 40 CFR 268.3. The Agency has determined that this waste management practice does not minimize threats posed by land disposal of lead-containing hazardous waste because the practice essentially "blinds" the analytic method but would not in fact prevent lead from leaching under actual disposal conditions. Affected wastes include: toxic characteristic lead wastes (D008), any characteristic waste containing lead as an underlying hazardous constituent, and listed wastes for which lead is regulated.

On March 2, 1995, EPA published the LDR Phase III proposal (60 FR 11702). Among other things EPA proposed that the addition of iron dust to stabilize lead in characteristic hazardous waste constituted impermissible dilution, rather than treatment legitimately meeting the LDR treatment standards (60 FR 11731). In the proposal, the Agency stated that certain industries were adding iron dust or iron fines to some characteristic hazardous waste (nonwastewaters) as an ostensible form of treatment for lead. As an example, the Agency noted that foundries were known to mix iron dust or filings with the D008 sand generated from their spent casting molds, viewing this practice as a form of stabilization. In the proposal, the Agency stated that such stabilization practices were inadequate to minimize threats posed by land disposal of metal-containing hazardous waste, and proposed to clarify that waste management practice as "impermissible dilution" under 40 CFR 268.3.

In response to the proposal, the Agency received numerous comments. Commenters in support of the "impermissible dilution" designation agreed with EPA's discussion in the preamble that no chemical or pozzolanic reaction was possible from iron dust or filings and that standard chemistry showed that metals such as lead were not bound in a non-leachable matrix when using iron dust or filings as a stabilizing agent. One commenter further mentioned many instances where generators have avoided treatment costs by adding iron to their metal and cyanide-bearing waste streams, thus providing the short-term ability to, as the commenter stated, "fool" the test for both amenable cyanide and leachable metals. The commenter pointed out that EPA's adoption of a total cyanide treatment standard had essentially solved the issue of ineffective treatment of cyanide using iron, but the issue of metals treatment still remained. The commenter concluded that the prohibition on the use of iron dust and filings would promote more treatment of toxic metal-bearing wastes.

Other commenters discussed analytical concerns with the TCLP test when used on iron-treated wastes. One commenter stated that the addition of iron to D008 waste sand may mask the presence of lead in two ways: first, iron is more easily oxidized than lead so that under the conditions of the TCLP test, iron may be preferentially leached out into solution, leaving the lead in an insoluble, undetectable state. A second problem with the presence of iron in the TCLP test is spectral interference with the analysis of lead, which could result in positive interference and a raised detection limit for lead.

Numerous commenters representing the foundry industry, however, argued extensively against the "impermissible dilution" designation for iron treatment of characteristic metal wastes. The commenters stated that EPA's position was neither justified nor supported by any technical documentation. The commenters further stated that: (1) iron added to lead bearing waste foundry sand effectively immobilizes the lead and yields a treatment residue that consistently passes the TCLP; (2) TCLP tests, run on foundry sand that was treated with iron and landfilled 8–10 years ago, yielded lead results below the 5 ppm level; (3) analytical results for total iron from landfill samples clearly show the iron has not oxidized after

several years; and (4) iron treatment has long-term stability. The commenters further stated that no evidence either from leaching tests or from real-world experience showed that iron treatment is not a successful long-term treatment for brass foundry sand when the treatment is conducted in an appropriate manner. On March 5, 1997, the Agency addressed the issue and industry arguments in Land Disposal Restriction—Phase IV Treatment Standards for Characteristic Metal Wastes; Notice of Data Availability (NODA) (62 FR 10004). In this NODA, new studies and data were presented on the issue of the treatment adequacy of adding iron to characteristic metal wastes as a method of treatment. As explained in the Phase III proposed rule (60 FR 11702), and again in the NODA of March 5, 1997, the addition of iron seems to temporarily retard the leachability of lead in spent foundry sand, thus allowing the waste to pass the TCLP test, but not to be permanently treated. At the time of the Phase III final rule, EPA decided not to finalize a determination that the practice was a form of impermissible dilution in the Phase III final rule without studying the issue further. See 61 FR 15569, April 8, 1996. In the March 5, 1997 NODA, two studies were noticed that had recently been completed.

One study was developed by Dr. John Drexler of the University of Colorado and the other by Dr. Douglas Kendall of the National Enforcement Investigation Center (NEIC). The results of these studies indicated that the addition of iron filings or iron dust to spent foundry sands (D008) did not constitute adequate treatment of the waste because high concentrations of lead remained available to the environment and indeed have been shown to leach in actual field testing of units receiving the spent foundry wastes. (The reader is referred to 62 FR 10004, March 5, 1997 for a full discussion of the studies).

Specifically, Dr. Drexler's study concluded: (1) the spent foundry wastes placed in Nacodoches Municipal Landfill remained hazardous; (2) the addition of iron filings to spent foundry sand does not cause chemical reduction (i.e., the hazardous lead remains oxidized); (3) the addition of iron filings to the spent foundry sand promoted a physicochemical dilution of the sample during the TCLP by producing significant increases in surface area sorption sites; (4) the addition of iron filings to the waste artificially altered the environmental character of the TCLP test by increasing pH and lowering Eh (redox potential) and DO (dissolved oxygen); and (5) in-vitro testing shows that these "treated" wastes maintain a high bioavailability of lead.

Dr. Kendall's study concluded that the addition of iron is not a permanent way to treat lead-contaminated waste. Specifically, he concluded that: (1) no reaction occurs when metallic iron is mixed with lead-contaminated foundry sand (D008); (2) during the TCLP process, lead begins to leach into the solution and if metallic iron is present, the lead concentration in solution will decrease by an oxidation/reduction reaction to levels below the lead characteristic; (3) only if fresh metallic iron is regularly introduced into the mixture, can soluble lead be kept at low levels; and (4) upon placement of the waste in a landfill and left alone, the iron will oxidize, losing its ability to reduce lead ions.

Peer review of the studies concurred with the findings that the addition of iron filings to spent foundry sand is not treatment of hazardous waste and that the scientific data presented in the studies were based on sound scientific research and support the conclusions made. (See "Peer Review Report, September 3, 1996, submitted by A.T. Kearney, Inc., Dallas, Texas to Rena McClurg, Regional Project Officer, USEPA, Dallas, Texas.)

The Agency received several comments in response to the NODA. One State agency commented that based on the evidence gathered by the EPA, the addition of iron fines as treatment of lead containing wastes appears to be unacceptable under most disposal criteria. Furthermore, it was the commenter's contention that the method in question should be rejected where disposal of wastes so treated may be subjected to acid leaching and chemical oxidation, in particular disposing of wastes in a municipal solid waste landfill. The commenter did note however that data exist to support the contention that the treatment may be acceptable for brass foundries under specified monofill disposal criteria. Another commenter requested clarification as to whether iron-bearing lead waste products, i.e., from the steel bridge blast cleaning and painting industry, would be impacted. The commenter recommended that all waste debris from any lead abatement project be deemed hazardous and treated appropriately regardless of the type of abrasive blast media used.

Two commenters argued that the conclusions drawn from the studies conducted by Drs. Kendall and Drexler were erroneous or misplaced from a regulatory standpoint. In particular the commenters argued, among other things, that given the biased sampling, i.e., sampling of only "hot spots" in the landfill and disregard for SW–846 statistical analysis, EPA should reconsider its view on the treatment of foundry sands with iron filings. (The reader is referred to the "Comment Response Document" for this final rule for a more complete discussion of the comments received on this issue.)

EPA has evaluated all the comments on the subject studies and on the issue of iron filings as a treatment method for lead nonwastewaters. The regulatory issue at hand—and the focus of the studies—is whether or not adding iron metal is adequate treatment for LDR purposes. Several commenters have elected to take issue with points that are not the central focus of the two studies. While a statistical evaluation is used to determine if a waste is hazardous, all parts of the waste must be treated to meet the applicable standards, not just a representative sample. Thus, if results show that "hot spots" remain, this is presumptive evidence that treatment was not effective and there is noncompliance with the LDR treatment requirements. In the preceding determination of whether a waste is hazardous, the Agency guidance in SW–846 provides basic sampling strategies for simple and stratified random sampling of the waste as a whole. However, in application of the land disposal treatment standards, all portions of the waste must meet the applicable treatment standards, i.e., no portion may exceed the regulatory limit. See 40 CFR 268.40. Hence, commenters that focused on the SW–846 sampling issue largely misconstrued the central findings of the studies.

In response to comments pointing to the disposal of a waste in a monofill, while data may suggest that disposal of iron treated waste in this type of controlled environment may be protective in some scenarios, RCRA section 3004(m)(1) requires treatment to substantially diminish the toxicity of the waste or substantially reduce the likelihood of migration of hazardous constituents from the waste so that short-term and long-term threats to human health and the environment are minimized. This statutory requirement has not been met with iron addition plus placement in a monofill since ultimate placement of the waste in a monofill is not germane to the key issue at hand—is the treatment prior to land placement effective.

With respect to this key issue, the Agency's determination that the addition of elemental iron in the form of fines, filings, etc., constitutes impermissible dilution is predicated on the fact that the adsorption of soluble

lead on to the iron surface is a reversible reaction and once the iron surfaces oxidize (which naturally occurs when the treated waste is exposed to air), the ability of the additive (iron) to scavenge soluble metals is diminished. Therefore, the treatment is not permanent. In addition, adsorption alone is not a reliable method of permanently immobilizing lead which both studies conclude. The authors have also concluded, and the Agency agrees, that the prohibition should apply to any lead-containing waste. As stated by Dr. Kendall in his response to comments, "Lead-contaminated foundry sand is no different from any other waste which fails the TCLP test because of excessive amount of extractable lead. The addition of iron metal (zero valence iron) is not a permanent treatment because iron oxidizes. Since iron addition is not a permanent treatment, it should not be allowed for hazardous wastes which are to be land disposed, regardless of their origin." (See memorandum from Samuel Coleman, USEPA to James R. Berlow, USEPA Re: "Reply to Comments Concerning Prohibition of Land Disposal of Iron Treated Lead Contaminated Wastes". November 17, 1997.)

As indicated above, the addition of iron metal is not a permanent treatment because the iron inevitably oxidizes and loses its adsorptivity for soluble lead ions. After oxidation of the iron surfaces, surface adsorption of lead ions ceases and the lead-bearing waste returns to its original state; all pretext of treatment is lost. Since iron addition is not effective, it cannot be allowed for hazardous lead-containing hazardous wastes that are to be land disposed, regardless of their origin (i.e., all lead-bearing wastes, not just foundry sands).

The Agency concludes that addition of iron metal, in the form of fines, filings, or dust, fails to provide long-term treatment for lead-containing hazardous wastes. EPA is codifying this determination by calling the practice impermissible dilution, and so invalidating it as a means of treating lead in lead-containing hazardous wastes. It can also be simply viewed as a type of treatment that fails to minimize the threats to human health and the environment posed by disposal of lead-containing hazardous wastes, because lead mobility is not substantially reduced when the waste is disposed.

In response to comments whether use of iron-containing abrasives to remove lead-based paint, for example from the steel bridge blast cleaning and painting industry, may be a type of impermissible dilution, the Agency notes that the dilution prohibition does not apply to processes which generate a waste, only to processes that treat a waste which already has been generated. See S. Rep. No. 284, 98th Cong. 2d Sess. 17 (1984). As such, it would not appear that abrasive blasting is impermissible dilution since it is part of the process generating the waste, i.e., the removed paint. If generators added iron filings/dust or discarded, off specification steel shots to lead-based paint waste (similar to the current foundry practices), it is analogous to impermissible dilution and this rule bans such practice. However, addition of iron filing/dust to a hazardous waste (before the hazardous waste determination) is a lot different from using steel pellets/shots, silica-containing products, and other abrasive materials for paint removal.

The Agency has been pursuing several specific efforts to evaluate the environmental hazards caused by disposal of lead-containing wastes, including evaluation of damage case information included in the 1996 Hazardous Waste Characteristic Scoping Study, re-examination of the risk modeling used for the 1995-proposed Hazardous Waste Identification rule, and evaluation of fate and transport in other environmental media from industrial nonhazardous solid waste disposal facilities. Upon completion of these activities, the Agency will be in a better position to decide whether disposal of lead-containing waste is a health and environmental concern warranting listing or whether revising the TC regulatory limit would be more appropriate.

In addition, the Agency notes that a determination that a waste is not hazardous (here because addition of iron during a generating process results in a determination that paint waste does not exhibit a characteristic) may not be a shield against future liability, if the disposal results in environmental damage. Note that under CERCLA, not just generators are liable for any environmental damage caused by the release of hazardous material into the environment. CERCLA liability is independent of any hazardous waste determination that previously may have been made. EPA believes that in light of CERCLA liability and the available environmental contamination data, it would be prudent for generators to examine their waste generation and management practices with an eye toward segregation of lead-based paint waste and iron dust/flakes or steel shots, and potential re-smelting of the lead-bearing residuals.

As a final matter, it has been argued to the Agency that the proposed (and now final) action regarding addition of iron filings is analogous to treatment of fluoride in a process for treating aluminum spent potliner waste (K088) operated by Reynolds Metals Company. See generally Docket P33F–S0069 p. 6 (July 7, 1997) and 62 FR 37694, 37697 (July 14, 1997) (responding to comment and establishing October 8, 1997 as the date prohibition of land disposal of K088 wastes takes effect). The argument goes that in the Reynolds treatment process, reagents are added to the process that only allow the fluoride to meet the LDR treatment standard by blinding the analytical method (the TCLP), but do not result in permanent reduction of fluoride mobility in the treated wastes. See 62 FR at 37695, noting that levels of fluoride in the leachate from actual disposal are well in excess of the levels established in the treatment standard (as measured by the TCLP). Hence, it is asserted, this process must be an example of impermissible dilution.

The Agency disagrees. First, EPA calculated that the process did reduce fluoride mobility on the order of 28%. Docket P33F–S0064. This estimate may in fact understate the extent of treatment. The maximum amount of fluoride detected in actual leachate from the disposed treatment residue is 2228 mg/L. 62 FR 37695. However, untreated potliners leached fluoride at concentrations ranging from 7730–8860 mg/L when exposed to the same type of leaching medium (simulated monofill leaching medium). Docket P33F–S0049 data set J. Thus, EPA finds that the process is resulting in non-dilutive treatment of fluoride. In addition, the reagent used for fluoride treatment serves another legitimate function in the process—as a fluxing agent to prevent agglomeration of material in the rotary kiln. 62 FR at 37695. Dilution which is a necessary part of a treatment process is normally permissible. 51 FR at 40592 (November 7, 1986); 62 FR at 37697. Consequently, EPA does not regard the treatment of fluoride in the Reynolds K088 treatment process to be a form of impermissible dilution.

h. Treatment Standards for Wastewater and Nonwastewater Forms of Mercury Waste. The Agency, in the original Phase IV rule, proposed to change the treatment standard for one subcategory of TC mercury wastewaters (D009—All Others) from the characteristic level of 0.20 mg/L (established in the Third Third rule (55 FR 22520. June 1, 1990) to the previously promulgated UTS for mercury wastewaters (Mercury—All

Others) of 0.15 mg/L. (60 FR 43654, August 22, 1995.) The Agency received no comments on this proposed change. As such, the Agency is promulgating a treatment standard of 0.15 mg/L for wastewater forms of D009—All Others.

The Agency also proposed to revise the treatment standard for TC mercury nonwastewaters (D009—All Others) from the characteristic level of 0.20 mg/L TCLP to 0.025 mg/L TCLP. The nonwastewater UTS for mercury is based on the mercury standard developed from K071 waste treatment data. The only comments received on the achievability of this proposed change were regarding the application of this treatment standard to TC mercury soil. TC soils are subject to specific treatment standards being finalized elsewhere in today's rule. More detail can be found on the mercury soil comments in the Response to Comments Background Document. Therefore, the Agency is promulgating a treatment standard of 0.025 mg/L TCLP for nonwastewater forms of D009—All Others in today's rule.

With respect to the broader issue of mercury treatment, the Agency plans to conduct an intensive review of traditional and innovative technologies over the next year or so. Outreach to various industry, academic, and other groups is also being investigated as to its feasibility. Key information, when available, on this effort can be obtained from the RCRA Hotline, and notices of significant public events will be placed in the **Federal Register** and on EPA's Internet home page.

i. Final Universal Treatment Standard for Nonwastewater Forms of Nickel. The Agency proposed in the Phase IV Second Supplemental to change the UTS for nonwastewaters containing nickel from 5.0 mg/L TCLP to 13.6 mg/L TCLP. This revision to the UTS was based on new performance data obtained by the Agency and presented in that notice. The Agency did not receive any significant comments on this issue. However, as discussed in an earlier section of today's preamble, the Agency discovered an error in the calculation of the treatment standard. In applying the LDR methodology for calculation of a treatment standard, the Agency failed to conduct a "Z-score" outlier test. With the application of this test, 5 out of the 122 data points originally used in the calculation of the standard, were determined to be outliers. This error resulted in a revised treatment standard for nickel nonwastewaters of 11.0 mg/L TCLP. In light of this amended standard, the Agency has reviewed all of the comments and data submittals, and has determined that all the treatment data for nickel is below 11.0 mg/L TCLP. Accordingly, the Agency is today promulgating a final UTS for nickel nonwastewaters of 11.0 mg/L TCLP. No change was proposed for nickel wastewater; therefore, the UTS remains at 3.98 mg/L for these wastes.

j. Final Treatment Standards for Selenium Wastes. (i) Treatment standards for TC Selenium Wastes (D010). The majority of commenters supported the Agency proposal to maintain the 5.7 mg/L TCLP level for D010 nonwastewaters. They strongly agreed with the Agency's reasoning, and urged EPA to adopt the proposed treatment standard.

One commenter, however, maintains that the Agency should establish a "High Selenium Greater Than 200 ppm" subcategory for nonwastewaters, with a corresponding treatment standard of 10 mg/L TCLP. The commenter has cited technical problems in achieving the proposed treatment standard level for highly contaminated selenium wastes. The commenter states that, since 1995, they have consistently experienced problems treating waste streams from glass manufacturing companies with wastes that contain high concentrations of selenium. The commenter provided treatability testing data from a selenium waste stream, containing 80 mg/L TCLP, which showed that 16 different treatment recipes were tested prior to finding one that would treat a selenium waste to below 5.7 mg/L TCLP. The other data, from three different generators of selenium waste, suggest TCLP values of untreated waste of between 465–1064 ppm TCLP, with treated wastes achieving between 2.5 and 45.6 mg/L TCLP.

The Agency has reviewed all the treatment data and, for the most part, waste streams containing selenium exist either in relatively low concentrations (0.1–0.13 mg/L TCLP) or in extremely high concentrations (greater than 450 mg/L TCLP). Because of the highly divergent nature of these wastes and the difficulty in treating selenium with multiple metals at almost any concentration, it seems unreasonable to mandate that one treatment standard could be applicable to both. Calculations of a revised treatment standard, based only on the newly submitted treatment data for the high selenium concentration wastes, would yield a standard of 77.0 mg/L TCLP for selenium nonwastewaters. If a calculation is done after pooling all selenium data (including low concentration selenium data), a standard of 261 mg/L TCLP would result. The Agency is reluctant to establish a treatment standard for selenium nonwastewaters of either 77.0 mg/L or 261 mg/L TCLP on a national level. Earlier data suggest and commenters concur that for the majority of selenium wastes the proposed standard of 5.7 mg/L TCLP for selenium nonwastewaters is appropriate. Furthermore, only three high selenium concentration waste streams that could apparently not be treated to this level. Therefore, there is little reason to pool all treatment data or to engage in bifurcation of the selenium standard.

Accordingly, the Agency is promulgating a treatment standard of 5.7 mg/L TCLP for nonwastewaters containing selenium. The Agency, however, is convinced that the high-level selenium waste streams for which data were submitted to EPA will be unable to be treated to achieve the 5.7 mg/L TCLP standard. Therefore, in a **Federal Register** notice that will be published shortly, the Agency will be requesting comment on a proposal to grant a site-specific treatment variance for Waste Management, Inc. for the treatment of some D010 wastes containing high concentrations of selenium.

The Agency also is promulgating as proposed a wastewater treatment standard of 0.82 mg/L for D010 wastewaters. No comments were received on this issue.

(ii) Universal Treatment Standard (UTS) for Selenium. As noted above, in the May 12, 1997 reproposal of the Phase IV rule, the Agency proposed to change the UTS for selenium nonwastewaters from 0.16 mg/L to 5.7 mg/L TCLP. For the reasons discussed above for D010 nonwastewaters, 5.7 mg/L TCLP is a better reflection of treatability of difficult-to-treat selenium waste streams than 0.16 mg/L TCLP. This is the level being promulgated today for the selenium nonwastewater UTS. (It should be noted that because the UTS is above the TC level for selenium, selenium is not considered an "underlying hazardous constituent" (UHC) in characteristic waste, according to the definition at 268.2(i)). The wastewater UTS for selenium remains unchanged at 0.82 mg/L.

k. Final Treatment Standards for Silver Wastes. (i) Treatment standards for TC Silver Wastes (D011). In today's final rule, EPA is promulgating a nonwastewater treatment standard of 0.14 mg/L TCLP for characteristic silver (D011). For wastewaters, EPA is promulgating a treatment standard of 0.43 mg/L as proposed in the original Phase IV proposal on August 22, 1995 (60 FR 43684). EPA is in the process of determining whether silver should

UMI

remain on the TC list at 40 CFR 261.24(b) Table 1 or whether the current TC level should be altered. If EPA alters the status of silver on that TC list, EPA will revisit the treatment standards for silver.

(ii) Proposals, Comments, and Responses. Until today's notice, the treatment standards for wastewater and nonwastewater forms of D011 have both been 5.0 mg/L TCLP, which is the TC level. In 1995, EPA proposed a treatment standard of 0.43 for wastewaters and 0.30 mg/L for nonwastewater, based on the best treatment data in EPA's possession at that time (60 FR 43684). EPA received comments urging the Agency to refrain from setting a treatment standard lower than the TC level and instead suggesting that EPA remove silver from the TC list altogether due to new information on the low risk of silver to human health.

In a 1996 Notice of Data Availability (NODA), EPA presented the option of retaining the 5.0 mg/L treatment standard for D011 wastes (61 FR 21420, May 10, 1996). Comments were divided in two groups: those which supported the option, and those which stated that EPA had no firm basis for such a decision, given the potential toxicity of silver to aquatic life.

Since receipt of the comments on the NODA, EPA acquired more recent treatment data on TC metals, including silver. Based on these data, EPA learned that D011 nonwastewaters could be successfully treated to a level of 0.11 mg/L using HTMR, and EPA proposed revising the UTS for silver in its Phase IV Second Supplemental proposal. The grab data used to establish this treatment standard was submitted to the Agency by an HTMR facility (62 FR 26041) (Background Documents from Second Supplemental proposal). Commenters on the Second Supplemental reiterated that silver should not be on the TC list. However, the commenters continued, if silver remains on the list for now, EPA should not set a more stringent standard than the current one of 5.0 mg/L, but rather it should choose a risk-based standard. Commenters explained further that little D011 is disposed, because silver is generally recovered from silver wastes.

In response to the reproposal, the Agency received no significant comment on the technical aspects of achieving the proposed treatment standard; however the Agency did receive from International Metals Company (INMETCO) an additional 74 grab data points on the treatment of silver using HTMR. (See memorandum from Howard Finkel, ICF, Inc., to Nick Vizzone, USEPA Re: "Calculation of Universal Treatment Standards (UTS) for HTMR Residues Using Data Submitted by Horsehead Research Development Company, Inc. and INMETCO," December 17, 1997.) The Agency used INMETCO data for the calculation of the proposed treatment standard and determined that this additional data should be included in the data pool. As previously discussed in Section III.A. of today's preamble, the Agency discovered an error in the calculation of the treatment standard. In applying the LDR methodology for calculating a treatment standard, the Agency failed to conduct a "Z-score" outlier test. With the application of this test and the inclusion of the 74 additional data points, 3 out of the 114 data points, were determined to be outliers, resulting in a revised treatment standard for silver nonwastewaters of 0.14 mg/L TCLP. The Agency has reviewed the comments in light of this amended standard and believes that it can be achieved by both HTMR and stabilization technologies. Data submitted by commenters in response to this proposal also support this conclusion. See supporting information contained in the docket for this rule.

The Agency does not have an adequate basis for taking the actions recommended by some commenters, i.e. to remove silver from the TC list, or regulate it at a less stringent level than the proposed technology-based treatment standard. EPA is in the process of determining whether silver should remain on the TC list at 40 CFR 261.24(b) Table 1, or whether the current TC level should be altered. In addition, EPA continues its work on the Hazardous Waste Identification Rule (HWIR) to establish risk-based exit levels for hazardous wastes. The Agency is not yet able to establish a nationally-applicable risk-based level for silver that fulfills the statutory charge of minimizing threats of hazardous waste to human health and the environment.

The process of establishing such a level is technically complex; EPA is currently modeling the ecological and human health effects of exposure to silver through numerous pathways. Several issues remain unresolved concerning human health and environmental risk. EPA is continuing to investigate these issues. The Agency recently acquired studies indicating that silver may be connected to central nervous system and other non-cancer effects in humans. The draft Reference Dose for these effects have not been finalized by the Agency for use in risk assessments. (A Reference Dose is a benchmark level for chronic toxicity that is protective of human health.) In addition to potential adverse human health effects, uncertainties and concerns also remain for potential adverse environmental effects. Although EPA removed the Maximum Contaminant Level (MCL) for silver in drinking water, the Ambient Water Quality Criteria remain in effect due to potential aquatic toxicity. Further areas of uncertainty are how silver speciates after release (i.e. which valence state of silver would be present). The issue could be important since potential toxic effects differ depending on the species of silver present. In short, EPA's work on understanding risks from disposal of silver-containing hazardous wastes is ongoing, and it would be premature to establish a treatment standard based on risk at this time.

In the absence of such "minimize threat" levels for hazardous constituents, the Agency establishes standards based on Best Demonstrated Available Technology (BDAT). (See full explanation in the preamble of the Phase II Final LDR rule at 59 FR 47986, September 19, 1994.) The fact that the UTS for nonwastewater forms of silver is being lowered (made more stringent) from the existing level of 0.30mg/L to 0.14 mg/L is due to new data on what treatment technology achieves. As explained in the summary of this preamble section (Section III: Revised Land Disposal Restrictions for Metal Constituents in All Hazardous Wastes, Including Toxic Characteristic Metals), technology-based standards are the best assurance that threat is minimized, given the uncertainty as to the level at which threats of hazardous waste disposal are minimized.

EPA expects that the new treatment standard for silver wastes will have little, if any impact on the regulated community. As stated by commenters, high-silver wastes are generally recycled due to their economic value and are covered by the special streamlined standards for recyclable materials utilized for precious metal recovery at 40 CFR Part 266.70 Subpart F. Moreover, the Regulatory Impact Analysis for this rule estimated that the new, more stringent UTS levels for metal constituents, including silver, will not increase compliance costs. This is because the current treatment methods already achieve the new standard of 0.14 mg/L in silver nonwastewaters. (Achievability of the UTS for TC silver wastewaters is not an issue; EPA received no comments nor data on its proposal to apply the existing UTS of 0.43 mg/L.)

Thus, the Agency is promulgating the wastewater standard of 0.43 mg/L as proposed and the nonwastewater

standard of 0.14 mg/L. If EPA changes the status of silver on the TC list, EPA will revisit the treatment standards for silver wastes.

(iii) Universal Treatment Standard (UTS) for Silver Nonwastewaters. (Please refer to the discussion above about the development of the treatment standard for characteristic silver for information on the development of the UTS levels.) In today's final rule, EPA is promulgating a nonwastewater UTS of 0.14 mg/L TCLP for silver.

l. Final Universal Treatment Standard for Nonwastewater Forms of Thallium. The Agency proposed in the Second Supplemental Proposed Rule to change the UTS for thallium-containing nonwastewaters from 0.078 mg/L TCLP to 0.20 mg/L. (The original standard was based on composite sampling from an HTMR facility). This proposal was based on new data obtained by the Agency and presented in that notice. Several commenters supported the change. However, two commenters argued that EPA had not demonstrated that existing commercial technologies were capable of achieving the proposed standards or that technologies were otherwise available. The Agency remains unconvinced by the arguments of the commenters and notes that they supplied no treatment data in support of their contentions. Accordingly, the Agency is today promulgating as proposed a revised UTS for nonwastewaters containing thallium of 0.20 mg/L TCLP. No change was proposed for wastewater containing thallium; therefore the UTS remains 1.4 mg/L.

m. Final Treatment Standard for Nonwastewater Forms of Vanadium in P119 and P120 Wastes. The Agency proposed in the Second Supplemental Proposed rule to change the UTS for nonwastewaters containing vanadium in P119 and P120 wastes from 0.23 mg/L TCLP to 1.6 mg/L TCLP. This proposal was based on new data obtained by the Agency and presented in that notice. Commenters were supportive of the change. The treatment standard of 1.6 mg/L TCLP is being promulgated as proposed. No change was proposed for wastewater containing vanadium in P119 and P120 wastes, therefore, the UTS remains 4.3 mg/L. The Agency would like to point out that vanadium is not an "underlying hazardous constituent" in characteristic waste, according to the definition at 268.2(i).

n. Final Treatment Standard for Nonwastewater Forms of Zinc in K061 Waste. The Agency proposed in the Second Supplemental Proposed rule to change the treatment standard for zinc nonwastewaters in K061 waste from 5.3 mg/L to 4.3 mg/L . This proposal was based on new data obtained by the Agency and presented in that notice. One commenter was supportive of the change, while two other commenters were concerned with zinc being identified as an UHC. Still another commenter, a major HTMR facility, submitted data (152 data points) showing 100% compliance with the standard after 6 high statistical outliers were removed. Indeed, the great majority of these data showed zinc at levels an order of magnitude below the promulgated standards. EPA believes these data confirm the achievability of today's standard. Therefore, the Agency is today promulgating a revised nonwastewater treatment standard of 4.3 mg/L TCLP for K061 waste. No change was proposed for wastewater containing zinc in K061; therefore the UTS remains 2.61 mg/L. In response to the comments regarding zinc as an UHC, the Agency would like to point out that zinc is only regulated in K061 waste; it is not defined as an "underlying hazardous constituent" in characteristic waste, according to the definition at 268.(i).

UNIVERSAL TREATMENT STANDARDS FOR TWELVE METAL CONSTITUENTS

[Affecting Nonwastewater TC Metal Wastes and Nonwastewater Metal Constituents in All Wastes]

Waste code	Constituent	TC level (mg/L)	Existing UTS level (mg/L TCLP)	2nd supplemental proposed UTS level (mg/L TCLP)	Final UTS level (mg/L TCLP)
D005	Barium	100	7.6	21.0	21.0
D006	Cadmium	1.0	0.19	0.20	0.11
D007	Chromium	5.0	0.86	0.85	0.60
D008	Lead	5.0	0.37	0.75	0.75
D009- all others	Mercury	0.2	0.025	0.025	0.025
D010	Selenium	1.0	0.16	5.7	5.7
D011	Silver	5.0	0.30	0.11	0.14
	Antimony		2.1	*0.07	1.15
	Beryllium		0.014	*0.02	1.22
	Nickel		5.0	13.6	11.0
	Thallium		0.078	0.20	0.20
	Vanadium**		0.23	1.6	1.6
	Zinc**		5.3	4.3	4.3

* The proposed UTS levels for antimony and beryllium were rounded up to the nearest 0.01 mg/L TCLP.
** Vanadium and zinc are not underlying hazardous constituents.
Note: Treatment standards for TC metal wastewaters have also been revised in today's rule, but are not reflected in this table.

D. Use of TCLP to Evaluate Performance of Treatment Technology for Treating Hazardous Metal Constituents

Commenters did not question the appropriateness of using the TCLP as a means of evaluating the performance of the treatment technology used to treat metal hazardous constituents in hazardous wastes. EPA is addressing the issue *sua sponte* to set out why the recent opinion of the D.C. Circuit in *Columbia Falls Aluminum Co.* v. *EPA* (No. 96–1234, April 3, 1998) does not affect use of the TCLP for this purpose.

Columbia Falls presented an unusual set of facts. EPA had established treatment standards for spent aluminum liners (waste K088), which standards used the TCLP to measure performance of the treatment technology for several hazardous constituents, including arsenic and fluoride. All of the commercial treatment capacity for this waste was provided by a single facility, and all of the treatment residue from this single process was disposed at a single location. Slip op. at p. 6; 62 FR

at 1993 (Jan. 14, 1997). Notwithstanding that the treatment process was able to achieve the treatment standards for arsenic and fluoride as measured by the TCLP (i.e., the treatment residue, when tested with the TCLP, never exceeded the regulatory levels), actual *leachate* from the disposal site contained significantly higher levels of these constituents. *Id.* EPA also had not offered any substantive explanation for continued use of the TCLP to measure performance of the treatment process for these constituents after the extreme disparities in actual performance in the field became known. *Id.* p. 18. Under these circumstances, the court held that it was arbitrary and capricious to continue to use the TCLP because it bore no rational relationship to what was actually occurring. *Id.* p. 19.

None of these circumstances are present here. The TCLP has not been shown here to be underpredictive of performance of treatment technology for key hazardous constituents for any wastes, much less, as in *Columbia Falls*, to be drastically underpredictive (for two constituents) for 100 % of the wastes to which the test applied. Moreover, the wastes affected by the standard in today's rule will not uniformly be going to a single disposal environment where actual leaching of key constituents is shown to be higher than the regulatory level. Rather, the wastes will be decharacterized and so can be disposed in any landfill: municipal, subtitle D or subtitle C. Given the enormous diversity of characteristic wastes and the diversity of likely disposal environments, the TCLP will not pervasively underpredict as was the case with spent potliners. Unlike the situation in *Columbia Falls*, therefore, there is no argument that application of the TCLP to measure treatment performance will fail to minimize threats posed by these wastes' land disposal.[1]

EPA also emphasizes that the LDR treatment standards are technology-based, not risk-based. A key role of the TCLP in the treatment standard is to measure whether the best demonstrated treatment technology has been properly applied to the waste. Thus, unlike the situation when the test is used as a means of identifying whether or not wastes are hazardous, the TCLP is not principally serving a predictive function when it is used as a component of an LDR treatment standard. The test is normally a good measure of evaluating the performance of treatment technology both because it is a widely-available test for metal mobility, and also because it is typically somewhat aggressive (*Edison Electric*, 2 F.3d at 445). Thus, it is a useful tool for measuring whether metal mobility has been substantially reduced in order that threats posed by land disposal be minimized (as required by section 3004 (m)). In the Agency's view, therefore, questions as to the validity of the TCLP as a component of LDR treatment standards are raised only under the extreme circumstances present in *Columbia Falls*, where, for all wastes and all disposal scenarios affected by the standard, large disparities between actual environmental field results and the treatment standard raise significant questions as to whether treatment is minimizing threats. These questions are not present for the metal-containing wastes here.

[1]Nor is there a legitimate argument that the TCLP is impermissibly overpredictive. Indeed, since the TCLP has already been upheld as a means of identifying many of these metal-containing wastes as hazardous, *Edison Electric Inst.* v. *EPA*, 2 F.3d 438, 444–45 (D.C. Cir. 1993), and since the 'minimize threat' requirement in section 3004(m) is a more stringent test, *HWTC III*, 886 F.2d at 363, *a fortiorari* it is reasonable to use the TCLP as part of the process of assuring that threats posed by land disposal of these wastes are minimized.

IV. Application of Land Disposal Restrictions to Characteristic Mineral Processing Wastes

Summary

EPA is today finalizing its proposal to apply the Universal Treatment Standards (UTS), as revised in part today, to the newly identified characteristic mineral processing wastes. In earlier rules and a Report to Congress, EPA has determined which mineral processing wastes are not excluded in the Bevill Amendment and are thus considered "newly identified" wastes subject to RCRA regulations. (See 54 FR 36592, September 1, 1989; 55 FR 2322, January 23, 1990; and Report to Congress on Special Wastes from Mineral Processing, USEPA, July 31, 1990.) The treatment standards being promulgated today are located in the table "Treatment Standards for Hazardous Wastes" at 268.40 in the regulatory language for today's rule. The wastes are identified by characteristic waste code (e.g. D002 corrosive waste, or D008 TC lead waste); there is no separate section in that table for characteristic mineral processing wastes.

A. Proposal, Comments, and Responses

In the original Phase IV, EPA proposed to apply the metal UTS, as measured by the TCLP (60 FR 43582, August 22, 1995) to all TC metal wastes. On January 25, 1996, EPA further proposed to apply the existing UTS to the newly identified mineral processing wastes, i.e., mineral processing wastes that exhibit a characteristic and do not have Bevill status and are not excluded from being a solid wastes due to recycling. The Agency stated in this proposal that existing data showed that these "newly identified" mineral processing wastes were similar to those wastes for which the UTS was achievable, and consequently the UTS fairly reflected the performance of Best Demonstrated Available Technology (BDAT) for these wastes. (See 61 FR 2338 for a complete discussion of the Agency's rationale for extending the UTS to both wastewater and nonwastewater forms of "newly identified" mineral processing wastes.)

Many commenters in response to this proposal took issue with the Agency's conclusions that the existing data demonstrated that the UTS was achievable for the newly identified mineral processing wastes and stated that the record for the rulemaking reflected no such showing. The commenters further argued that to develop representative treatment standards for mineral processing wastes, the Agency must: (1) Collect and analyze a representative mineral processing waste characterization and treatability data set; (2) analyze that data using well-reasoned and documented methods for determining the treatability of the subject wastes; (3) make a determination as to whether the UTS or some other LDR treatment standards are appropriately applied to mineral processing wastes; and (4) provide notice and an opportunity to comment on that determination prior to imposing any LDR treatment standards on such wastes. Several other commenters took issue with the Agency's use of only HTMR data to develop the treatment standards.

As a result of these comments and others received in response to the original Phase IV rule, the Agency decided to further assess the treatment of TC metal wastes and mineral processing wastes. As previously discussed in today's preamble, the Agency collected actual stabilization performance data during three site visits conducted in September 1997. In particular, treatment data were collected for the following primary mineral processing wastes: cadmium sponge residue, cupel and crucibles from fire assay laboratories, slag from fire assay laboratory, soil and debris contaminated with sulfuric acid, blast furnace slag, baghouse dust, lead/bromide residue, and gold ore leach tailings. In addition, treatment data from the following secondary mineral processing wastes

were also collected: lead slag waste, lead-bearing assay laboratory wastes, lead contaminated wastes, cupels, and debris; blast furnace slag, lead recycling by-products, lead contaminated soils, and lead battery recycling slag waste. Many of these wastes were particularly difficult to treat due to high total and leachable levels of metals, extreme Ph, and presence of multiple hazardous metal constituents.

As previously discussed in an earlier section of today's preamble, the Agency assessed two data sets representing performance of stabilization and HTMR for the treatment of metal-containing waste streams. This assessment began with the calculation of treatment standards for each of the two data sets. Next, the Agency compared the treatment levels for stabilization versus HTMR. Based on this comparison, the Agency selected the highest level for each metal as the proposed UTS to allow for process variability and detection limit difficulties. As noted earlier, this approach is consistent with the legislative goal of providing substantial treatment through standards that are achievable by an array of well-performing available treatment technologies.

On May 12, 1997, the Agency issued a Second Supplemental Proposal (62 FR 26041). In it, EPA proposed to change the numerical limits for all nonwastewater wastes containing the following metal constituents: antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc. EPA also proposed these same UTS treatment standards for TC metal wastes identified as hazardous due to the concentration of barium, cadmium, chromium, lead, selenium, or silver. Based on the data collection efforts, the methodology used to develop these revised standards, and the preponderance of mineral processing treatment data used to calculate the standards, the Agency was convinced that the transferability of the universal treatment standards to mineral processing wastes was well supported.

In response to these revised treatment standards and their application to mineral processing wastes, the Agency received few comments. Several commenters supported the Agency's decision to apply the LDR treatment standards to mineral processing wastes. A limited few, however, continued to argue that EPA's application of the LDR program to mineral processing wastes was not supported by the record. The commenters' position is unsubstantiated, relying entirely upon assertions that the standards are not achievable. No data was submitted to support the commenters' position. Conversely, the data in hand (some of which reflect successful treatment of hard-to-treat mineral processing wastes) show that the treatment standards are achievable using either stabilization or HTMR for mineral processing wastes. As a result, the Agency is today finalizing the applicability of the existing UTS to the newly identified mineral processing wastes.

The reader is referred to an earlier section of today's preamble for a complete discussion of treatment standards for metal wastes being promulgated today.

B. Clarification That Universal Treatment Standards Apply to Ignitable, Corrosive, and Reactive Characteristic Mineral Processing Wastes

As discussed above, the treatment standards promulgated in this rule will apply to all the newly identified characteristic wastes from mineral processing operations. This includes not only the mineral processing wastes exhibiting the toxicity characteristic (TC), but also wastes that exhibit the characteristic of ignitability (D001); corrosivity (D002); or reactivity (D003). (See definitions of these characteristics at 40 CFR 261.20 through 261.23.) The treatment standards found in 40 CFR 268.40 require removal of the characteristic as well as meeting the treatment standards for all underlying hazardous constituents (UHCs) reasonably expected to be present at levels above the UTS. The Agency received no comment on this issue at proposal (see 61 FR 2338, January 25, 1996). Therefore, the Agency has no reason to believe that the UTS are not achievable for mineral processing wastes also exhibiting the characteristic of ignitability, corrosivity and/or reactivity. As such, the Agency is today promulgating the application of UTS to D001, D002, and D003 mineral processing wastes.

C. Use of TCLP to Evaluate Performance of Treatment Technology for Treating Hazardous Metal Constituents in Mineral Processing Wastes

Part of this rulemaking involves consideration of what the appropriate regulatory test is to determine if mineral processing wastes exhibit the toxicity characteristic. The Agency addresses this issue in detail later in this preamble when discussing retention of the TCLP for this purpose. Here, we confirm that the Agency will also continue to use the TCLP as part of the LDR treatment standard for these wastes. Although commenters did not raise this issue, the Agency feels that addressing it is appropriate in light of the D.C. Circuit's recent decision in *Columbia Falls Aluminum Co.* v. *EPA* (No. 96–1234, April 3, 1998).

The critical component in making waste identification determinations (i.e., to determine whether a waste should be regulated) is ascertaining a plausible mismanagement scenario for the waste if unregulated, and finding a predictive model that can reasonably evaluate whether the waste is capable of posing substantial present or potential harm to human health and the environment under those conditions. *Edison Electric Inst.*, 2 F. 3d at 444. This issue simply does not arise in the LDR context since the wastes subject to LDR are regulated hazardous wastes, and the issue of where and how they would have been managed absent Subtitle C regulation is irrelevant.

In the LDR context, all land disposal (except that occurring in no-migration units) is defined as being unprotective (see, e.g. RCRA section 3004(d)(1)), largely due to the "long-term uncertainties associated with land disposal" (*id.*). For this reason, treatment standards reflecting performance of Best Demonstrated Available Technology provide an objective means of removing as much of this inherent "long-term uncertainty" as possible, and so permissibly achieve the ultimate requirement of minimizing threats posed by land disposal of hazardous wastes. *HWTC III*, 886 F. 2d at 362–65; 55 FR at 6642 (Feb. 26, 1990). The principal role of the TCLP in these treatment standards is assuring the performance levels achievable from use of these best treatment technologies, not predicting environmental fate in the disposal environment.

As discussed earlier, the TCLP is historically accepted as being well-suited for evaluating performance of treatment technology for metals given its availability and general aggressiveness for mobilizing metals. Also, we note that since the TCLP serves a different purpose in the LDR treatment standards than it serves for identifying wastes as hazardous, and since it is well-suited for that purpose, there would be no contradiction in using it as part of the LDR standard even if a different test were to be used (presumably in the future) for waste identification.

Nor does the *Columbia Falls* opinion undercut use of the TCLP as a component of treatment standards for mineral processing wastes. As noted earlier with respect to other toxic metal-containing wastes, EPA does not view *Columbia Falls* as requiring a change in

use of the TCLP as part of the LDR treatment standards. The TCLP has not been shown generally to be underpredictive of performance of treatment technology for key hazardous constituents for any wastes, much less, as in *Columbia Falls*, to be drastically underpredictive (for two constituents) for 100% of the wastes to which the test applied. For all mineral processing wastes to which it was applied, the TCLP test has not been shown to be underpredictive either, and so would be part of the mechanism for assuring that treatment minimizes threats posed by land disposal of these wastes. Moreover, it should be noted that mineral processing wastes can be and are treated commercially, and the treatment residues are then disposed along with other wastes in different types of disposal units. See, e.g. the document entitled, "Background Documents Supporting the Phase IV Final Rule: Metal Treatment Standards" in the RCRA Docket (commercial treatment company treating mineral processing wastes along with other metal-containing wastes and disposing of commingled treatment residues). These units certainly can generate mildly acidic leachate. 51 FR at 40594 (Nov. 7, 1986). Given these circumstances, the TCLP is an appropriate part of a standard which minimizes threats posed by land disposal of these wastes.

V. Other LDR Issues That May Affect Both Toxic Characteristic Metal Wastes and Characteristic Mineral Processing Wastes

A. Treatment Standards for Soil Contaminated With TC Metal Wastes or Characteristic Mineral Processing Wastes

1. Summary

EPA has decided that the LDR treatment standards (i.e., UTS) for toxicity characteristic metals (D004–D011) and newly identified mineral processing wastes being promulgated in today's rulemaking will not apply to soils contaminated with these hazardous wastes. Instead, these contaminated soils will be subject to the treatment standards for soil originally proposed in a separate rulemaking entitled the Hazardous Waste Identification Rule for Contaminated Media ("HWIR-Media") (61 FR 11804, April 29, 1996). These treatment standards are being finalized in a separate section of today's rule. However, because of their impacts on TC metal and mineral processing wastes, a brief introductory discussion is warranted at this point.

2. Discussion of Today's Approach

In the Phase IV proposed rule (60 FR 43682, August 22, 1995), the Agency did not specifically exempt soil contaminated with TC metal wastes from the newly proposed LDR standards; thus, the UTS standards for metals would have applied to TC metal soils. In the Phase IV First Supplemental Proposal (61 FR 2338, January 25, 1996), the Agency proposed applying existing universal treatment standards to newly identified mineral processing wastes, i.e., to mineral processing wastes that exhibit a characteristic, do not have Bevill status, and are not excluded from being solid wastes due to recycling. As a consequence, soils contaminated with these newly identified mineral processing wastes would also have been subject to UTS.

In today's rule, the Agency is finalizing alternative treatment standards for contaminated soil reproposed in the HWIR-Media rulemaking. (See the section of this preamble on treatment standards for contaminated soil.) These treatment standards for hazardous contaminated soils are being finalized for all hazardous wastes, including TC metal and newly identified mineral processing wastes.

B. LDR Treatment Standards for Manufactured Gas Plant Waste (MGP)

1. Summary

Today, the Agency is promulgating treatment standards for hazardous MGP wastes and soils, i.e., wastes and contaminated soils that resulted from processing coal to produce gas and that exhibit a characteristic of hazardous waste. Typically these operations were conducted at manufactured gas plants until the 1950s, and wastes remain at those closed MGP sites. MGP wastes are among the mineral processing wastes which the Agency determined in 1989 and 1990 to be subject to RCRA jurisdiction because they are not excluded from RCRA by the Bevill Amendment. See 54 FR 36592 (September 1, 1989). Hence, they are a subset of the newly identified mineral processing wastes covered by the prohibitions and treatment standards promulgated in this rule.

On January 25, 1996, EPA proposed to apply LDR treatment standards to MGP wastes (61 FR 2360). MGP wastes are no longer being produced, since manufactured gas plants are no longer in operation. The Agency notes that the LDRs only apply at closed MGP sites that are excavated and managed in a way that constitutes placement in a land disposal unit (See 61 FR 18805, April 29, 1996.) The LDRs would require that actively managed MGP wastes be treated to eliminate any characteristics and to achieve the UTS for any underlying hazardous constituents prior to land disposal. Today's rule finalizes the UTS for MGP wastes that exhibit the toxicity characteristic. However, for soils contaminated with MGP wastes, EPA is today promulgating treatment standards specifically for hazardous soil. These soil standards, generally, require treatment to achieve 90 percent reduction of hazardous constituent levels, or 10 times the UTS levels. See Section VII of this preamble.

Today's rule does not alter the Agency's 1993 memorandum that interpreted existing rules to say that the ash that results from burning MGP remediation wastes along with coal in utility boilers remains covered by the Bevill amendment and hence is not regulated under Subtitle C rules. (See memorandum, dated April 26, 1993, entitled "Remediation of Historic Manufactured Gas Plant Sites", from Sylvia K. Lowrance, Director of the Office of Solid Waste, to EPA Regional Waste Management Division Directors. The memorandum is located in the RCRA docket for the Phase IV Supplemental Proposal dated January 25, 1996; 61 FR 2338.) Such residuals are considered to be covered by the Bevill amendment because they result primarily from the combustion of coal (assuming, if the MGP remediation wastes that are co-burned are hazardous, the residues are not significantly affected by burning the MGP wastes, within the meaning of 40 CFR section 266.112).

2. Background

Manufactured gas plants were designed to generate gas from coal. The coal tar residuals generated from the process remain at these historic MGP sites. Many of these sites have soils contaminated with these coal tar residuals. The majority of these contaminated soils will come from the cleanup of historic MGP sites. A significant portion of the soil is nonhazardous, but approximately 15 percent of the soils fail the toxicity characteristic leaching procedure test for benzene. These toxicity characteristic (TC) soils also typically contain PAHs, heavy metals, inorganics, volatile aromatics, and phenolics. At certain closed MGP sites, there can be non-soil hazardous wastes, e.g., coal tars in tar holders, which may need to be treated to UTS levels if they are actively managed and land disposed.

3. Public Comments and EPA Responses

Commenters expressed several major concerns about the Phase IV proposal to apply UTS to MGP wastes. First, they urged the Agency to delay implementing the soil standards until the final HWIR-media rule becomes effective. In addition, commenters requested that EPA re-affirm the Agency's 1993 co-burning memorandum for MGP wastes. Finally, commenters urged the Agency to establish specified treatment methods for those MGP wastes that will not be managed according to the Agency's 1993 co-burning memorandum, rather than making the wastes subject to the UTS concentration levels as proposed. One commenter identified several methods of management that could be specified: "recycling technologies including the use of coal tar residuals to manufacture asphalt, bricks, and cement; and combustion technologies that include utility boiler co-burning, incineration and thermal desorption." The commenter stated that specified methods would preserve flexibility for managing MGP site remediations and remove regulatory barriers to expeditious site cleanups.

Regarding the commenter's concern about the coordination of Phase IV standards and the HWIR-media rule, the Agency is finalizing treatment standards for hazardous contaminated soils in a separate section of today's rule. Also, although the Agency did not reopen the issue, the Agency confirms that the 1993 co-burning interpretation remains in effect.

The Agency has studied carefully the comment urging the Agency to specify incorporation of MGP waste into asphalt, bricks, or concrete as a designated method of treatment, which would have the effect of making wastes so treated not subject to meeting numerical treatment standards for hazardous constituents. The recycling of hazardous waste-contaminated soil in asphalt, brick, or cement manufacturing produces products that potentially could be applied or placed on the land. These recycling practices incorporate the contaminated soils into the products, and, thus, are considered to be a "use constituting disposal" (see section 261.2 (c) (1)). The use constituting disposal practice (assuming legitimate recycling is occurring) is regulated per the provisions of 40 CFR sections 266.20 through 266.23. This issue is discussed in more detail in section VII of the preamble.

At this time, the Agency does not have adequate information on asphalt, brick, or cement produced from MGP hazardous waste to determine whether these waste-derived products minimize threats posed by land disposal of MGP wastes. (See also response to USWAG comment #00035 in "Phase IV Response to Comments" in the docket to this rule.) Until the Agency can further study the issue, it is not designating production of these materials from MGP soils as a specified method of treatment. Existing 266.23 (a) continues to apply. And, as noted earlier, for MGP sites in particular, the Bevill exclusion still applies for MGP wastes co-burned in coal-fired utility boilers.

EPA is aware that the regulated community has requested various types of flexibility from LDR treatment standards in managing their site-specific cleanup, remediation, and/or removal activities of these wastes and contaminated soils. With the possible exception of use consituting disposal scenarios, the Agency continues to believe that more complete relief for remediation wastes is needed, particularly with respect to the land disposal restrictions and is best provided by targeted statutory change. Thus, the Agency will continue to participate in discussion of potential legislative solutions on this important issue.

Please refer to the Phase IV response to comments document that is available at the RCRA docket for responses to other issues raised by commenters.

C. Treatment Standards for Debris Contaminated With Phase IV wastes

The Agency is clarifying that debris contaminated with TC metal or characteristic mineral processing wastes can be disposed if it meets the treatment standards established in this rule, but also can be disposed if it meets the standards for debris set out at 40 CFR 268.45.

D. Treatment Standards for Radioactive Mixed Waste

1. Background

Radioactive mixed wastes are wastes which satisfy the definition of radioactive waste subject to the Atomic Energy Act (AEA) 10 CFR Part 61 and also contain waste that is either listed as a hazardous waste in Subpart D of 40 CFR Part 261, or that exhibits any of the hazardous characteristics identified in Subpart C of 40 CFR Part 261. Since the hazardous portions of the mixed waste are subject to RCRA, the land disposal restrictions apply to the mixed waste. Today's rule promulgates revised treatment standards for radioactive wastes that are mixed with metal characteristic wastes and do not currently have a method of treatment (i.e. HLVIT) specified as BDAT.

Treatment standards for radioactive waste mixed with metal-bearing waste were first promulgated in the Third Third rule at 55 FR 22626 (June 1, 1990). That rule established a subcategory of mixed wastes for a specific high level wastestream at the Savannah River site, for which a specified method of treatment is currently required. This method is HLVIT (vitrification of high-level radioactive waste) for radioactive high-level wastes generated during the reprocessing of fuel rods mixed with characteristic metal wastes. This was done because of the human health hazards associated with sampling that would be required if numerical standards were applied. The Third Third rule stated that all the promulgated treatment standards in that rule for RCRA listed and characteristic wastes apply to the RCRA hazardous portion of mixed radioactive (high-level, TRU, and low-level) wastes, unless EPA has specifically established a separate treatability group for a specific category of mixed waste. Thus, that rule required that radioactive waste mixed with metal characteristic waste would have to comply with the LDR treatment standard for the metal characteristic waste, as well as any requirements set forth by the NRC for the radioactive component of the mixed waste.

Because today's rule revises the treatment standards for metal characteristic wastes (i.e., revising certain metal numeric treatment standards, and applying UTS levels to underlying hazardous constituents in the characteristic waste), the treatment standards for radioactive waste mixed with metal characteristic waste that were not specifically subcategorized in the Third Third rule are also affected. Today's rule also revises treatment standards for twelve metal constituents in all wastes, including radioactive mixed wastes. In conclusion, unless specifically noted in Section 268, the treatment standards promulgated today apply to all mixed wastes.

2. Proposal and Issues Discussed by Comments

In addition to revising metal characteristic treatment standards that apply to mixed waste, the Phase IV proposal also discussed mixed radioactive and characteristic metal wastes which have been previously stabilized to meet the LDR requirements, and are now being stored until disposal capacity becomes available. The rule proposed to allow this particular category of stabilized

UMI

1998
UMI

characteristic metal mixed wastes to comply with the LDR metal standards that were in effect at the time the waste was stabilized. More simply, they would require no further treatment to comply with the newly promulgated TC metal standards. The proposal stated that mixed radioactive/characteristic metal wastes that are stabilized after the effective date of Phase IV would be subject to the metal treatment standards promulgated in the Phase IV rulemaking.

The majority of commenters agreed with this approach. The Agency believes that requiring facilities to re-treat the wastes could pose significant threats to human health and the environment (worker exposure, environmental releases). Essentially, requiring these wastes to meet the newly promulgated treatment standards could necessitate treaters opening sealed drums of stabilized mixed waste, grinding the stabilized material, and re-treating to comply with the treatment standards for the few constituents for which EPA is lowering the standards. One commenter wanted the exemption to be broadened to include wastes that were treated by methods other than stabilization. Because the exposure concerns of re-treating the previously stabilized waste primarily center around the idea of first grinding up the stabilized material to retreat it and the potential added radiological exposures attendant thereto, the broadening of this exemption without more specific information is not warranted at this point. Of course, if any wastes already meet the applicable treatment standards, for example macroencapsulation, then there is no need to initiate further treatment. It is important to emphasize that the Agency does not want any more handling of this material than is necessary, and we will entertain site-specific treatment variances to ensure that the appropriate balance is struck to ensure minimization of threats.

As noted, the majority of commenters agreed that hazards from added worker radiation exposure associated with re-treatment (i.e., opening drums, grinding already treated masses of mixed waste) would probably offset any gain in protection of human health and the environment resulting from compliance with the new metal treatment standards proposed in Phase IV. It was pointed out by one commenter that this is consistent with the Storage Prohibition (40 CFR 268.50(e)), where wastes that have met the applicable treatment standards are excluded from the storage prohibition. In addition, one commenter stated that these wastes have been treated to meet the LDR standards in place at the time of treatment, and the only reason they have not already been land disposed is that capacity has not been available. The one commenter who disagreed with the proposal stated that neither retreatment nor an exemption from the new standards are reasonable options, but prefers retreatment. The commenter did not provide support, and the Agency is not persuaded that retreatment is environmentally preferable. Thus, the Agency is promulgating the exemption as proposed. In response to comments, EPA is also indicating that the same principle applies with regard to listed wastes stabilized to meet a previous treatment standard, which standard is affected by this rule because the metal UTS have changed. Again, retreating these wastes would likely create new threats, not minimize them.

One DOE facility requested that the Agency clarify whether a waste required to be treated by a specific technology (i.e., HLVIT) would be required to be further treated for any UHCs present in the waste above UTS levels. The Agency is not imposing additional treatment requirements on those wastes for which a method of treatment (HLVIT) is specified.

Four facilities are concerned that uranium mills tailings will not remain exempt under RCRA. These wastes are by-product materials from uranium mining (i.e., waste acids from solvent extractions, barren lixiviants, slimes from solvent extraction and waste solvents generated in the beneficiation process during the extraction of uranium ore) and, therefore, are excluded from the treatment standards being promulgated today for TC metal wastes. With respect to the radioactive mineral processing wastes, RCRA Section 1004 (27) as codified in 40 CFR 261.4(a)(4) states that "...source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954 as amended, 42 U.S.C. 2100 *et seq*..." are not solid wastes. Therefore, such excluded materials are not subject to this rule. However, all other wastes not excluded under 40 CFR 261.4 are subject to today's rulemaking (assuming the waste is otherwise subject to today's rule).

Therefore, the Agency is today finalizing as proposed numerical treatment standards for radioactive waste mixed with metal-bearing characteristic waste for which no method of treatment has been established as the treatment standard.

E. Underlying Hazardous Constituents in TC Metal Wastes and Characteristic Mineral Processing Wastes

Summary: As with other characteristic wastes, TC metal wastes (D004—D011) and newly identified mineral processing wastes cannot be land disposed until the characteristic is removed and any underlying hazardous constituents (UHCs) are below universal treatment standards.

1. Background

In 1993, EPA began requiring that, in addition to removing the characteristic in the characteristic wastes, treatment must ensure that UHCs are below their UTS levels. (58 FR 29860; see also 59 FR 47982. See also *Chemical Waste Management* v. *EPA*, 976 F. 2d at 13–14, 16–18 (treatment standards may be lower than the level at which waste is identified as hazardous, and underlying hazardous constituents must be treated to minimize threats posed by land disposal)). UHCs are any constituents in 40 CFR 268.48 that are reasonably expected to be present at levels above the UTS at the point of generation of the characteristic waste. See 40 CFR 268.2(i). EPA's review of the treatment data on TC metal and mineral processing wastes shows that these wastes often contain underlying hazardous constituents, and that UTS are achievable for the UHCs.

2. Discussion of Today's Approach

In the August 22, 1995 Phase IV proposed rule, EPA proposed to apply treatment standards to all TC metal wastes, and on January 25, 1996, EPA further proposed the same for characteristic mineral processing wastes. See 60 FR 43654 and 61 FR 2338. Furthermore, EPA proposed that when the new treatment standards were promulgated, all of those newly identified wastes would have to be treated not only to meet the proposed treatment standards, but also to meet treatment standards for any UHCs reasonably expected to be present (at levels above UTS) in those wastes at the wastes' point of generation. See 60 FR 43654.

One commenter disagreed with the Agency's proposal, stating that the TC metal wastes that also contain organic UHCs would have to be treated by combustion technologies to achieve the organic UTS levels. The Agency disagrees. The organic UTS levels were based on the performance of combustion as well as other removal and destruction technologies. These other removal and destruction technologies can be used to treat organic UHCs to UTS levels in TC

metal wastes. Thus, pretreatment of the waste can be used to achieve the organic UTS levels. In addition, the commenter believed there would be difficulties in stabilizing incinerator ash to meet the finalized UTS levels for the metals. The Agency does not agree. In determining the UTS numbers for each metal, the wastes with the most difficult to treat metal constituents were treated by HTMR and stabilization technologies. The higher value between the two technologies was selected as the treatment standard. Thus, treatment using either HTMR or stabilization is expected to achieve the final metal UTS levels. It should be noted that selenium is not being regarded as a UHC since its treatment standard is above its characteristic level. Thus, a selenium characteristic waste will always be hazardous unless the selenium concentration is below the characteristic level of 1 mg/L TCLP. Fluoride, vanadium, and zinc are other metals not considered UHCs in characteristic wastes because these three metals are not on the Hazardous Constituents Table, 40 CFR 261 Appendix VIII (i.e., they are not "hazardous constituents"). (See Background Document for Phase IV Second Supplemental Proposed Rule.)

VI. Issues Relating to Newly-Identified Mineral Processing Wastes

As explained above, EPA considers mineral processing hazardous wastes to be newly identified or listed for purposes of determining when LDR prohibitions apply, since their status as hazardous wastes was not established until after 1984. Today's rule establishes prohibitions and treatment standards for these wastes, pursuant to RCRA section 3004(g)(4).

However, there are a series of important threshold issues in determining what these prohibitions and treatment standards apply to, generally involving the issues of whether primary mineral processing secondary materials are solid and hazardous wastes. There are three main issues. A fundamental first issue is whether, if a mineral processing secondary material (which would otherwise be a hazardous waste) is recycled within the mineral processing industry sector, it is a solid waste. Of particular importance in assessing applicability of the LDR program, is a second issue: whether there is land placement of the mineral processing secondary material before recycling, or during the recycling process. If the material is a waste, a third issue is relevant: is the waste a beneficiation/extraction waste or one of 20 mineral processing wastes that are excluded from subtitle C regulation under the Bevill exclusion (see RCRA 3001 (b)(3)(A)(ii)).

In this rulemaking, EPA also is addressing certain sub-issues that are related to determining whether a particular mining waste is subject to the Bevill exclusion, including whether a waste is "uniquely associated" with mining, how the introduction of non-exempt, mineral processing feedstocks into a Bevill process may affect the Bevill status of the waste generated from the process, and how the mixture of Bevill wastes with other hazardous wastes affects the Bevill status of the resulting wastes when disposed.

As stated in the January 1996 proposal, EPA is not reopening in any respect the Bevill determinations previously made by the Agency, including the Agency's articulation in 1989 of the functional distinctions between beneficiation and mineral processing. *See* 61 Fed. Reg. 2354. Some commenters misinterpreted EPA's statements in the proposal generally describing the beneficiation/processing distinction as somehow reinterpreting the scope of the Bevill amendment. That discussion was intended, however, merely to restate principles articulated by EPA in 1989 (see 54 Fed. Reg. 36619), not to reopen in any way the distinctions as articulated previously by the Agency. Whether a particular waste is from beneficiation or mineral processing will continue to be determined based on 40 CFR 261.4(b)(7) and criteria articulated by EPA in the 1989 preamble.

The following sections of the preamble discuss these threshold issues.

A. Introduction

In July of 1988, the U.S. Court of Appeals, for the D.C. Circuit in *Environmental Defense Fund* v. *EPA (EDF II)*, 852 F.2d 1316 (D.C. Cir. 1988), *cert. denied*, 489 U.S. 1011(1989), ordered EPA to restrict the scope of the Bevill mining waste exclusion, as it applied to mineral processing wastes, to include only "large volume, low hazard" wastes. In response, the Agency promulgated several rules that delineated the scope of the Bevill exemption for extraction/beneficiation and mineral processing wastes. In these rulemakings, the Agency applied high-volume/low toxicity criteria for determining whether a particular waste was subject to the Bevill exemption. The Agency also described the general characteristics that would distinguish extraction/beneficiation wastes from mineral processing wastes. The rules also evaluated which specific mineral processing wastes were in conformance with these high volume/low toxicity criteria and thus were eligible for the exclusion provided by RCRA 3001(b)(3)(A)(ii) (the "Bevill exclusion").

These rules were promulgated on September 1, 1989 (54 FR 36592) and on January 23, 1990 (55 FR 2322). EPA was required to prepare a *Report to Congress* which further studied mineral processing wastes identified in the 1990 rule to determine their regulatory status under the Bevill exclusion. This report was issued on July 31, 1990 (*Report to Congress on Wastes from Mineral Processing*). EPA fully considered information from, and comments on, the *Report to Congress* in a regulatory determination published on June 13, 1991(56 FR 27300). The list of Bevill exempt activities and wastes is set out at 40 CFR 261.4(b)(7).

Many mineral processing wastes that EPA determined did not fall within the Bevill exclusion as a result of the 1991 rule appear to exhibit the toxicity characteristic due to metal content (D004–D011), and also exhibit corrosivity (D002), and/or reactivity (D003). For purposes of LDR applicability, these wastes are "newly identified" because they were brought into the RCRA Subtitle C system after the date of enactment of the Hazardous and Solid Waste Act Amendments on November 8, 1984. (See 55 FR at 22667 (June 1, 1990). Hence, their land disposal has not been prohibited until today's rule.

The Agency is currently required by a court approved consent decree (*EDF* v. *Browner*, No. 89–0598 (D.D.C.)) to promulgate LDR restrictions for characteristic and listed mineral processing wastes, and metal wastes hazardous under the revised toxicity characteristic, by April 15, 1998. On April 14, 1998, EPA filed an unopposed motion requesting the Court to extend the deadline to April 30, 1998 to establish Land Disposal Restrictions for newly identified mineral processing wastes by April, 1998. The legal obligation to establish prohibitions on land disposal and treatment standards for newly identified mineral processing wastes is established by statute. RCRA section 3004(g)(4).

B. Overview of Today's Rule

1. Issues Related to Which Mineral Processing Secondary Materials are Subject to LDRs

As noted above, a threshold question when considering whether wastes are prohibited from land disposal is whether the mineral processing secondary materials are "solid wastes"

under RCRA. The issue is of importance with respect to land disposal prohibitions for the mineral processing industry because this industry recycles mineral processing secondary materials that exhibit hazardous waste characteristics, and sometimes uses land-based units—piles and impoundments—to store these materials before recycling. Thus, there is an issue as to whether such materials are solid wastes subject to the land disposal prohibition (as well as to the rest of Subtitle C). The Agency issued two proposals (61 FR 2338, January 25, 1996, and 62 FR 26041, May 12, 1997) which discussed potential RCRA jurisdiction over secondary materials from mineral processing that are reclaimed within the industry sector and sought comment on a proposed conditional exclusion from the definition of solid waste.

We now further summarize how today's rule deals with issues raised by whether and when mineral processing secondary materials, when placed in land-based storage units, are subject to the LDR standards and other Subtitle C controls. The rationale for the Agency's decisions are described below.

To be a hazardous waste, a material must first be a solid waste. RCRA section 1004 (5). To be a "solid waste" a material must in some sense be "discarded." RCRA section 1004 (27). A material is not "discarded" if it is "destined for immediate reuse in another phase of the industry's ongoing production process and [has] not yet become part of the waste disposal problem." *American Mining Congress* v. *EPA*, 907 F. 2d 1179, 1186 (D.C. Cir. 1990).

This rule amends the current RCRA rules (existing 40 CFR 261.2(c)(3)) defining which "secondary materials"—sludges, by-products and spent materials—being generated by and reclaimed by mineral processing or beneficiation facilities are solid wastes. The rule does so by creating a conditional exclusion to the regulatory definition of solid waste, so that:

(a) Mineral processing secondary materials may not be stored on the land before they are reclaimed. The rule provides a partial exception to this principle: if the pile is placed on a pad which has been approved as protective by an EPA Region or a State with an authorized program, the pile would not be considered to be storing solid or hazardous waste, and so would be outside RCRA jurisdiction. Thus, if storage is used prior to reentry into a mineral processing reclamation process, to be excluded, all mineral processing secondary materials must be placed in tanks, containers, buildings, or approved piles resting on pads;

(b) Mineral processing secondary materials must be legitimately recycled to recover metal, acid, cyanide, water, or other values;

(c) Mineral processing secondary materials cannot be accumulated speculatively; and

(d) Facilities utilizing this conditional exclusion must submit a one-time notification of their recycling activities to EPA or the authorized State describing: the materials being recycled and the processes into which they are recycled; where storage units are located and their design. Facilities must update the notification if their recycling activities change.

EPA is thus essentially disclaiming authority over mineral processing secondary materials that are reclaimed within the mineral processing or mining/beneficiation industry sector, so long as there is no land-based storage preceding reclamation. Further, potential jurisdiction affects only *storage*. EPA is not asserting authority over any mineral processing production unit, even if the unit is land-based.

2. Issues Related to Whether Materials are Within the Scope of the Bevill Exclusion

a. Use of Non-Bevill Materials as Feedstocks to Operations Whose Waste is Bevill Exempt. Today's rule also allows secondary materials from mineral processing to be co-processed with normal raw materials in beneficiation operations which generate Bevill exempt wastes, without changing the exempt status of the resulting Bevill waste, provided that legitimate recovery of the mineral processing secondary material is occurring, and provided that primary ores and minerals account for at least 50 percent of the feedstock. The Agency voiced concern at proposal that the addition of mineral processing secondary materials into a Bevill exempt extraction/beneficiation process could have the potential to increase the risk of the resulting wastes. The Agency proposed adding a condition—the use of a significantly affected test (similar to the existing test used in the Burning in Industrial Furnaces (BIF) Rule (see 40 CFR 266.112))—as a means of assuring that resultant Bevill wastes were not adversely impacted by co-processing. EPA also considered simply limiting eligibility for Bevill status to situations where Bevill raw materials comprised the sole feedstock to the process.

After considering public comments, the Agency has decided to adopt the general approach proposed in January 1996, with one change. The Agency now does not believe that the use of the "significantly affected" test would appreciably reduce risks posed by the resulting wastes, and the Agency is concerned that it would severely disrupt legitimate recycling practices within beneficiation and mineral processing industries. Even in situations where a constituent may increase due to recycling, the increase may not be environmentally significant, may be balanced by the lowering of other constituents, or may be off-set by having to dispose of the material and utilize additional raw material feedstocks.

b. Uniquely Associated. The Bevill exclusion for the primary metal sector is limited to extraction/beneficiation wastes and 20 mineral processing wastes. Under Section 3001(b)(3)(A)(ii) of RCRA, the Bevill exclusion is available for "solid waste from the extraction, beneficiation and processing of ores and minerals." Under the Agency's longstanding interpretation, a waste must be "uniquely associated" with mining and processing of ores and minerals to be subject to the Bevill exclusion. The Agency currently uses a qualitative approach (see 45 FR 76619 and 54 FR 36623) to determine if a waste is uniquely associated. Because of public interest in how the Agency makes these determinations, the Agency sought comment on alternative approaches for making "uniquely associated" determinations.

The Agency is retaining and clarifying in this rule its use of its qualitative approach. The Agency recognizes that determining whether a particular waste is uniquely associated with extraction, beneficiation, and processing involves an evaluation of the specific facts of each case. While the Agency discussed, in the May 1997 proposal, several options that would establish a bright line for making this determination, the Agency is concerned that any of these tests could potentially be either over- or under-inclusive of the wastes that, in EPA's view, are best viewed as uniquely associated.

In the Agency's view the following qualitative criteria should be used to make such determinations on a case-by-case basis:

(1) Any waste from ancillary operations are not "uniquely associated" because they are not properly viewed as being "from" mining or mineral processing.

(2) In evaluating wastes from non-ancillary operations, one must consider the extent to which the waste originates or derives from processes that serve to remove mineral values from the ground, concentrate or otherwise enhance their characteristics to remove impurities,

and the extent to which the mineral recovery process imparts its chemical characteristics to the waste.

c. Bevill Mixtures. EPA first addressed mixing of hazardous wastes with Bevill wastes in 1989 (see 54 FR 36622–23). That rule provided that mixtures of Bevill wastes and listed wastes would be considered a hazardous waste unless and until the mixture was delisted. A mixture of Bevill waste and non-excluded characteristic hazardous waste, however, would be considered hazardous if it exhibited a characteristic of the non-excluded waste, but not if it exhibited a characteristic imparted to it by the Bevill waste. As explained in the proposal, this Bevill mixture rule was remanded to the Agency in *Solite Corp* v. *EPA*, 952 F.2d 472, 493–94 (D.C. Cir. 1991), and an emergency reinstatement of that rule was vacated on procedural grounds in *Mobil Oil* v. *EPA*, 35 F.3d 579 (D.C. Cir. 1994). Today EPA is reinstating the 1989 Bevill mixture rule. Under this 1989 rule, a mixture of a Bevill-exempt waste and a characteristic hazardous waste (or a waste listed solely because it exhibits a hazardous characteristic) is a hazardous waste if it continues to exhibit the characteristic of the non-excluded waste. Mixtures of Bevill wastes and other listed wastes are hazardous wastes unless and until delisted. In addition, the act of mixing Bevill and and non-Bevill wastes is subject to all normal Subtitle C consequences (i.e., requires a permit if it constitutes treatment, storage of disposal of hazardous wastes). EPA is adopting this approach because it preserves the Bevill exclusion for mixtures that are characteristically hazardous due to Bevill wastes, but nonetheless ensures that the Bevill Amendment is not used to allow Bevill wastes to shield/immunize non-Bevill hazardous wastes from regulatory controls that would otherwise apply to those wastes.

d. Response to Court Remands Dealing with Other Issues Relating to Mineral Processing and to Scope of Bevill Exclusion. (i) Toxicity Characteristic Leaching Procedure (TCLP) The applicability of the TCLP test to mineral processing wastes was challenged in *Edison Electric Institute* v. *EPA*, 2 F.3d 438 (D.C. Cir. 1993). In that case the Court held that the Agency must provide at least some factual support that the mismanagement scenario assumed in developing the TCLP is plausible when applied to mineral processing wastes or, alternatively, that mining wastes are exposed to conditions similar to those simulated by the TCLP, namely "contact with some form of acidic leaching media". 2 F. 3d at 447. EPA prepared a technical background document in support of the January, 1996 proposal, which presented data on this issue. This report concluded that mineral processing wastes had in the past been co-disposed with municipal wastes, and due to the location of mineral processing plants near large urban areas, it was plausible that these wastes could be mismanaged with municipal wastes. EPA also solicited information from the public that would help the Agency evaluate industry comments that the Synthetic Precipitation Leaching Procedure (SPLP) would provide a more accurate measure of how mineral processing wastes behave in the environment. EPA received extremely limited data from the public on this issue.

EPA has concluded, based on the information available to the Agency and review of public comments, that co-disposal of mineral processing wastes with municipal wastes is a plausible mismanagement scenario and that, therefore, application of the TCLP to these wastes continues to be appropriate. Moreover, comments from industry during the rulemaking stated that certain facilities co-manage mineral processing wastes with extraction and beneficiation wastes. Given the well-documented, acidic nature of some extraction and beneficiation wastes, mineral processing wastes disposed of in this manner may be subject to the kinds of low pH conditions that are reflected in the TCLP. For this additional reason, EPA finds that, under the plausible mismanagement standard articulated in *Edison Electric*, application of the TCLP to mineral processing wastes is appropriate in light of the information at the Agency's disposal. While the Agency has received comments seeking to compare the TCLP and the SPLP, the Agency has concluded, for reasons discussed later in this preamble, that this information is not sufficient to support adopting the SPLP as the appropriate test for mineral processing wastes at this time.

The Agency recognizes that the methodology underlying the TCLP may not reflect the variety of conditions under which some types of mineral processing wastes are disposed. As a result, the Agency will undertake, and within three to five years, conclude a review of the appropriateness of using the TCLP and other leaching protocols in this and other contexts.

(ii) Listed Hazardous Wastes. In *American Mining Congress* v. *EPA*, 907 F.2d 1179 (D.C. Cir. 1990), the Court found that the Agency's record regarding the listings of five waste streams (K064, K065, K066, K090, K091) did not adequately address certain issues raised in comments. EPA indicated its intent not to list these five waste streams in the January, 1996 proposal and placed a technical background document in the docket enumerating the reasons for those decisions. Many of these wastes are either no longer generated, or managed in a fashion not warranting listing. EPA did not receive any comments challenging those proposed decisions. Therefore, in this rule, EPA is not listing these five smelting wastes as hazardous wastes. Instead, EPA will rely on the RCRA hazardous waste characteristics to identify those portions of the wastes requiring management as hazardous wastes.

(iii) Titanium Tetrachloride. In 1989, EPA determined that wastes from the production of titanium tetrachloride were mineral processing wastes. DuPont challenged this decision, and the Court remanded EPA's decision for further consideration on grounds that the Agency's decision was unclear (see *Solite Corporation* v. *EPA*, 952 F.2d at 494–95 (D.C. Cir. 1991)). EPA reevaluated data on wastes from the production of titanium tetrachloride, and placed results of this reevaluation in the docket in support of the January 1996 proposal. EPA also has met with representatives of DuPont to discuss their process further. Based on the Agency's reevaluation of this issue, EPA, in this rule, concludes that iron chloride waste acid generated from the chloride-ilmenite process of titanium tetrachloride production should be classified as a mineral processing waste. The Agency has reached this decision because this process significantly affects the physical/chemical structure of the raw feedstock through chlorination and this reaction creates new chemicals (iron chloride and titanium tetrachloride gases). This meets the definition of mineral processing rather than beneficiation.

(iv) Air Pollution Control Dust and Sludges Generated From Lightweight Aggregate Production. Finally, since 1995, the Agency has conducted reviews of air pollution control dust and sludges generated from lightweight aggregate production, and has met with representatives of this industry sector. The Agency also has issued a Report *to Congress* and a regulatory determination on Cement Kiln Dust (CKD) (59 FR at 709, January 6, 1994 and 60 FR at 7366, February 7, 1995). EPA has found that some aggregate kilns and cement kilns use hazardous waste fuels to fire their units. Both types of facilities generate dusts which may be either reintroduced

UMI
VOL
63
ISS
100
MAY
26
1998
UMI

into the kiln or blended into the final product. While these dusts rarely exhibit any of the RCRA hazardous waste characteristics, the resultant product could be classified as hazardous waste due to the "derived from" rule if listed hazardous wastes are combusted. The Agency is seeking a way to encourage the legitimate and environmentally sound reuse of dusts, from both cement and lightweight aggregate manufacture. In an effort to develop a consistent regulatory approach, EPA, therefore, has decided to defer any decision on the Bevill status of air pollution control dust and sludges generated from lightweight aggregate production until evaluation of issues related to CKD and lightweight aggregate dust handling, use, and disposal can be completed.

e. Reexamination of Bevill Exempt Wastes. The May 12 proposal sought general comment on whether a reexamination of some Bevill waste is warranted given that additional risk assessment techniques and additional information are available since making the 1986 Bevill regulatory determination (51 FR at 24496, July 3, 1986) on mining and the 1991 Bevill regulatory determination on mineral processing (56 FR 27300, June 13, 1991). EPA presented information from Superfund sites and other sources which indicate that some Bevill wastes continue to cause environmental damage (see environmental damage and risk technical background documents placed in the January 1996, and April, 1997 dockets). The Agency also posed the question of whether some waste streams require additional study or regulatory controls. Today's rule is not making any changes to the status of Bevill exempt extraction and beneficiation wastes or the 20 exempt mineral processing wastes.

C. Analysis of and Response to Public Comments

1. Jurisdiction

a. EPA Authority to Regulate Mineral Processing Secondary Materials Reclaimed Within the Industry. Many industry commenters maintained that EPA lacks jurisdiction over mineral processing secondary materials reclaimed within the industry because such materials cannot be "solid wastes." The argument is straight-forward: a solid waste regulated under RCRA must be a "discarded material," RCRA section 1004 (27), and these materials are not discarded. The comments suggest that, under the case law, (in particular *American Mining Congress* v. *EPA*, 824 F. 2d 1177 (D.C. Cir. 1987) ("*AMC I*")), these materials are part of an on-going production process within the generating industry, and so cannot be "discarded."

EPA disagrees that there is an absolute jurisdictional barrier to regulating any management of mineral processing secondary materials which are reclaimed within the industry. Although the *AMC I* court found that, in some respects EPA's 1985 rules exceeded the statutory grant of authority, subsequent judicial opinions have sharply limited the scope of *AMC I*. The only absolute bar on the Agency's authority to define recycled mineral processing secondary materials as solid wastes is for "materials that are 'destined for *immediate reuse* in another phase of the industry's ongoing production process' and that 'have not yet become part of the waste disposal problem.'" *American Mining Congress* v. *EPA*, 907 F. 2d 1179, 1186 (D.C. Cir. 1990) ("*AMC II*") quoting *AMC I*, 824 F. 2d at 1186.[2]) The case law likewise makes clear that "discarded" is an ambiguous term, within EPA's discretion to interpret, consistent with RCRA's overall goals and purposes. *AMC II*, 907 F.2d at 1179; *American Petroleum Inst.* v. *EPA*, 906 F.2d 726, 741(D.C. Cir. 1990).

Applying this test, today's rule states that any mineral processing secondary materials which are being reclaimed immediately within the mineral processing industry (or within beneficiation) are not a solid waste. However, as explained below, EPA does not view mineral processing secondary materials which have been removed from a production process for storage as being "immediately reused," and so such materials are not automatically excluded from jurisdiction. EPA reiterates that there is a jurisdictional bar against regulating the actual production process (see *Steel Manufacturers Association* v. *EPA*, 27 F.3d 642, 647 (D.C. Cir. 1994); EPA also interprets the holding of *AMC I* to mandate this result), so today's rule does not assert authority over mineral processing production units. However, if production units are also used to dispose of hazardous wastes, those units are subject to RCRA Subtitle C.

With respect to mineral processing secondary materials which are stored before being reclaimed at mineral processing or beneficiation facilities—i.e. that are not being immediately reused—the Agency has established a conditional exclusion from the definition of solid waste, the conditions being designed to assure that management of these materials are not "part of the waste disposal problem." The main condition is that mineral processing secondary materials not be stored on the land (except for storage on approved pads) and not be stored in disposal units.

In considering the question of scope of jurisdiction, it is useful to remember that this rule applies to a continuum of potential recovery practices. At the one end of the continuum, where EPA's authority is most certain, would be the situation where mineral processing company A sends its secondary materials to unrelated mineral processing company B processing a different metal than company A. The case law indicates that EPA retains discretion to classify the material as a solid waste. *API*, 906 F.2d at 741 (transfer of steel industry dust to a metal reclaimer processing exclusively steel industry secondary materials can involve a RCRA solid waste). It should be remembered that EPA views "mineral processing" broadly in this rule to include all primary mineral processing sectors (see, e.g., the Agency's 1996 *Identification and Description of Mineral Processing Sectors and Waste Streams*). This document identified 41 different sectors involved in primary mineral processing. Primary mineral processing involves changing the physical and chemical structure of ores and minerals. For example, mineral processing includes the production of steel and the production of gold. These sectors generate very different types of wastes and recycle them under different conditions. Thus, the *API* principle of no absolute jurisdictional bar applies.

Points further in on the continuum would be if companies A and B process the same metal but are unrelated companies (also potentially within the *API* framework), and where companies A and B are under common ownership but not at the same site. The point on the continuum closest to on-going production is where secondary materials are reclaimed at the generating site, but where the process is non-continuous due to storage of materials. Immediate recovery on-site without storage would then mark the other end of the continuum, and would illustrate when materials are immediately reused within a continuous process, and so

[2]The other cases which have similarly stressed this narrow reading of *AMC I* are *American Petroleum Inst.* v. *EPA*, 906 F. 2d 726, 741 (D.C. Cir. 1990); *Shell Oil* v. *EPA*, 950 F. 2d 741, 755–56 (D.C. Cir. 1991); *Chemical Waste Management* v. *EPA*, 976 F. 2d 2, 14 (D.C. Cir. 1992); *United States* v. *Ilco, Inc.*, 996 F. 2d 1126, 1131 (5th Cir. 1993); and *Owen Electric Steel Co.* v. *Browner*. 37 F. 3d 146, 149–50 (4th Cir. 1994).

absolutely outside Subtitle C jurisdiction.[3]

EPA believes that it has discretion to consider whether any of these situations short of immediate reuse involve solid wastes, this discretion being limited by the second part of the Court's articulated test: is the non-continuous management of the mineral processing secondary materials part of the waste disposal problem. Thus, EPA in today's rule has focused on the storage of these materials. The leading authority for this approach is *AMC II*, where the Court found that secondary materials generated and reclaimed on-site could be classified as solid wastes because they were stored in surface impoundments. 907 F. 2d at 1186. The case involved a single plant which stored its secondary materials —sludges—in an impoundment before reclaiming all of the accumulated sludges in its own smelting process. 50 FR at 40292, 40296 (October 1985). Several comenters argued that *AMC II* involved only specutlative accumulation. This is not the case. The wastes generated in the impoundment were actually recycled 100 percent, not stored with expectation of recycling. 50 FR at 40292, 40296; Brief of Petitioner Amercian Mining Congress in *AMC II* (filed March 30, 1990) pp. 18, 29. The Court nonetheless held that the sludges were discarded, stressing the special sensitivity in RCRA to land-based units such as surface impoundments, and explaining how storage of secondary materials in such units can be part of the waste disposal problem (907 F. 2d at 1186–87). Thus, EPA believes that mineral processing secondary materials stored on the land are discarded.

Land-based storage of mineral processing sludges, spent materials, and by-products can be viewed by EPA as being part of the waste disposal problem. There is no dispute that a considerable amount of mineral processing secondary materials contain hazardous constituents that can threaten human health and the environment (see U.S. EPA, Office of Solid Waste, *Human Health and Environmental Damages from Mining and Mineral Processing Wastes*, 1995, and *Damage Cases and Environmental Releases*, 1997). Land-based units, and impoundments in particular, have certain inherent indicia of discard due to their inability to prevent releases of contained materials. RCRA section 1002(b)(7); *AMC II*, 907 F.2d at 1187; 53 FR at 521, 525 (Jan. 8, 1988). Surface impoundments pose essentially inherent risks of groundwater contamination due to the hydraulic pressure created by the contained liquids. *Chemical Waste Management* v. *EPA*, 919 F. 2d 158, 166 (D.C. Cir. 1992). There are many damage incidents which involve storage of mineral processing wastes in piles and surface impoundments, some of which involve mineral processing secondary materials stored in land-based units before eventual reclamation. These damage incidents confirm that this potential harm is not hypothetical.

It should be noted that there is Agency precedent for the limitation on land based storage as part of within-industry recycling practices. The Agency established the principle of encouraging recycling without allowing land-based storage at 40 CFR 261.4(a)(10). Any wastes from coke by-product production are not solid wastes if recycled to coke ovens conditioned on there being no land disposal from the point of generation to the point of recycling. The Agency also has promulgated a rule where recovered oil generated by any facet of petroleum exploration, production, and retailing is not a solid waste conditioned on no management of these materials in land-based units (see 59 FR 58936, July 28, 1994). The Agency has also proposed to extend this principle to a wider range of oil-bearing secondary materials (see 60 FR 57747, 57753, November 20, 1995). The condition likewise appears in current rules at 40 CFR 261.2(e)(iii) where it qualifies the exclusion for materials returned for reclamation in the process from which they are generated. The application of a no land placement condition in today's rule is, therefore, building on an established policy of encouraging recycling conditioned on no land placement.

Putting this together, the Agency reads the statute as creating an absolute jurisdictional bar in two situations: where mineral processing or beneficiation is occurring, and where reclamation is continuous in the sense that there is no interdiction in time—i.e. materials moving from one step of a recovery process to another without a break in the process, as for storage. As one moves back along the continuum, EPA has discretion to interpret whether secondary materials may be considered discarded. The Agency is exercising that discretion here by putting its focus on whether the reclamation, or more precisely, the storage which precedes reclamation, is part of the waste disposal problem because it involves storage which can be and has been part of that problem.

b. Are There Limits on Jurisdiction? (Response to Public Interest Group Position). In contrast, representatives of public interest groups argued that the Agency's authority was essentially unlimited. They believe that the authority should be extended, at a minimum, to all land-based units because such units are a type of disposal unit. With respect to mineral processing secondary materials that are managed in tanks, containers, or buildings (i.e. in other than land-based units), EPA sees no principle that compels the materials to be designated as solid wastes. As explained above, case law indicates that EPA has discretion to interpret which materials are "discarded" consistent with the overall statutory objective, *API*, 906 F.2d at 742. These objectives include not only assuring safe management of hazardous wastes, but also "encouraging . . . materials recovery, [and] properly conducted recycling and reuse . . . ." RCRA section 1003(a)(6). EPA's construction in today's rule, which rests largely on the distinction between land-based storage and more environmentally protective storage of secondary materials, is consistent with this object by encouraging "properly conducted recycling. . . ." In addition, EPA reads the case law as allowing the Agency to make reasonable distinctions among secondary material handling practices in determining when a particular recycling practice may be considered to be "part of the waste disposal problem." Finally, as EPA explained at proposal, there are potential jurisdictional constraints given that the mineral processing industry exists to recover mineral values from an initial raw material, and some aspects of recovery of mineral values from secondary materials can be like sequential processing of an initial raw material. 61 FR at 2342. Where there is no obvious element of discard present, such as land-based storage, the Agency does not believe that it should exercise its interpretive discretion to assert authority.

With respect to intra-industry reclamation practices involving land-based units, EPA largely is asserting authority. EPA proposed a series of conditions that would have allowed land-based storage units on the idea that there were certain unique necessities within this industry compelling use of such units. 61 FR at 2341. However, as the rulemaking progressed, it became

[3] The Agency indicated in its January 1996 proposal that some lower value mineral processing secondary materials are from ancillary production operations and that those materials were often placed in land-based storage units. 61 FR at 2340. Industry comments challenged this discussion as over broad and misplaced. Upon review, the Agency acknowledges that mineral processing facilities generate a wide range of secondary materials, which also have a wide range of values to the facility owner.

apparent that there are no such production-related necessities. Agency reevaluation of mineral processing secondary material volumes indicated that, in addition to volumes being lower than EPA initially believed, comparison to volumes of other industrial hazardous wastes indicated that these wastes were often higher in volume than mineral processing secondary materials and were being stored off the land. Consequently, the Agency is claiming authority over most land-based storage units.

The Agency is not, however, asserting authority over piles resting on pads determined by a state or EPA to be protective. The reasoning is similar to that for not claiming authority over within-industry secondary materials stored in tanks, containers or buildings. Such materials need not be viewed as "part of the waste disposal problem," and so, given the intra-industry recycling, need not be considered "discarded." The practice also can be viewed as a type of "properly conducted recycling" which should be encouraged. Again, EPA views this determination to be within its interpretive discretion.

EPA also disagrees that it is compelled to assert control over land-based units that are actual production units, i.e. that actually recover product. The Agency is aware of only two land-based units which recover metals: gold heap leach piles and copper dump leach piles. Under prior rulemakings (54 FR 36592 and 55 FR 2322), the Agency has defined these land-based units as extraction/beneficiation activities. The Agency is unaware of any other land based process units which actually recover metals. The Agency believes that regulating such units could pose the possibility of interdicting actual production steps which was the particular focus of the *AMC I* court. EPA notes, however, that storage units which also make secondary materials more suitable for actual recovery, such as equalization basins, can remain within Subtitle C jurisdiction. These units, in the Agency's view, are not the part of the process which actually produces an end product (such as the smelter at a smelting facility). At most, they facilitate eventual recovery. The Agency does not read the case law to say that such storage units are in all cases outside the authority of Subtitle C.

EPA also is not asserting authority over mineral processing secondary materials once they are removed from approved storage for reclamation. Thus, should a mineral processing plant reclaim mineral processing secondary materials after those materials are stored in land-based units (i.e. the materials defined as hazardous wastes in today's rule), they would no longer be solid and hazardous wastes. EPA believes it would be counterproductive to retain the hazardous waste status for mineral processing secondary materials entering reclamation. If the materials remain hazardous wastes, for example, the smelting process itself could be subject to Subtitle C regulation. EPA believes that it retains discretion to classify the removed materials as no longer being solid and hazardous wastes.

The Agency believes it has discretion to adopt this classification notwithstanding the court's decision in *American Petroleum Institute.* v. *EPA,* 906 F.2d 726 (D.C. Cir. 1990). In that case, the Court held that EPA had adopted the so-called indigenous principle, whereby secondary materials stopped being wastes at the point they were utilized as feedstock in a production process related to the one that generated it, without sufficient justification. 906 F.2d at 741–42. However, in that case, EPA had made no attempt to determine which materials were part of the waste disposal problem, and which were not. Here, the Agency is making clear that storage on the land of mineral processing secondary materials is the environmental concern, and that reclaiming mineral processing secondary materials within the industry is ordinarily a form of proper recycling which may permissibly be encouraged. RCRA section 1003(a)(6).

EPA also notes that it is possible that no mineral processing secondary materials will be placed in impoundments or in unapproved piles. Under today's rule, if a facility wishes to use a pile for storage (assuming the pile has not been adjudicated to be protective), the wastes would first have to be treated to meet Land Disposal Restrictions standards, probably rendering them unrecoverable. If an impoundment is utilized, wastes need not be pretreated, but the impoundment would have to meet minimum technology design standards and be dredged annually (RCRA section 3005(j)(11) and 40 CFR section 268.5) and, of course, ultimately obtain a RCRA permit. The Agency anticipates that facilities will use a non land-based form of storage instead.

c. Immediate Reuse.[4] In the May 1997 proposal, EPA suggested a different way of defining absolute jurisdictional limits, namely to say that secondary minerals generated by and "immediately reused" within the mineral processing industry, were not solid wastes. The reference to "immediate" was suggested as a means of interpreting the "immediate reuse in another phase of the industry's ongoing process" standard articulated in the case law. *AMC I,* at 824 F. 2d at 1185. The Agency proposed that secondary materials that were legitimately recycled within 48 hours would be outside RCRA jurisdiction, regardless of whether they were stored between process steps (including storage in land-based units). See 62 FR at 26051.

Industry and public interest groups both opposed the use of the 48-hour time limit included in the January 1996 proposal to define immediate reuse. Industry renewed its categorical objections based on *AMC I,* and noted that many secondary materials are legitimately reclaimed long after they are generated and the time period between generation and reclamation in no way affected their value. For example, commenters stated that the gold industry generates retort slags which contain gold values. Comments stated that these slags are stored off the ground for periods up to six months after which they are reintroduced into their recovery process.[5]

Public interest groups objected to the 48-hour limit on the basis that an absolute waiver of RCRA jurisdiction based on time does not translate to any reduction of environmental risk. Public interest groups also noted that the Court in *AMC II* granted jurisdiction to units holding secondary materials with the propensity to leak, and that the Court's opinion would extend to all land placement, since the continuous placement of materials on piles or other land-based units would result in the same "discard" underlying the Court's opinion.

Although the Agency necessarily accepts that materials immediately reused in another phase of the industry's ongoing production process are beyond EPA's jurisdiction, *AMC I,* 824 F.2d at 1185, the Agency is not adopting in today's rule the proposed 48-hour approach to define immediate reuse. The Agency is defining "immediate reuse" as the continuous recirculation of secondary materials

[4] It should be noted that EPA is not using "reuse" as a term of art in this section of the preamble (i.e. is not using the term as defined in 40 CFR 261.1(a)(5)), but rather is referring to immediate reclamation of materials (i.e. material recovery) at a mineral processing facility. The key concept here is actually "immediate," which EPA is using to interpret the phrase "continuous process" used in the case law.

[5] It should be noted that since no land-based storage is involved, these gold slags are not solid wastes under the final rule in any case (assuming that the recovery is legitimate and that the other conditions in the rule are satisfied).

back into recovery processes without prior storage. The plain reading of the words "continuous," 824 F.2d at 1193, and "immediate" preclude storage. Storage by its very nature means that processes are not continuous; rather, storage means that materials are generated which must be held apart for some period of time prior to reentry into a process. Storage, therefore, breaks the continuous and immediate nature of production and reentry. In addition, land-based storage units have inherent elements of discard. *AMC II*, 907 F. 2d at 1186–87.

The definition of "immediate reuse" in today's rule does not bar storage prior to recycling. Mineral processing industries will be able to store and recycle their mineral processing secondary materials outside RCRA Subtitle C requirements if they do so while meeting the conditions of the exclusion from the definition of solid waste contained in today's rule.

In the May 1997 proposal, the Agency discussed the possibility that some molten metals that spill onto the ground could be classified as materials undergoing immediate reuse (see 62 FR at 26051). The Agency noted that copper reverts (refined copper material) can be spilled in the process of being transferred from one part of the smelting process to another. Such reverts are picked up as soon as they can be safely handled and are placed directly back into the smelting process. The Agency has reviewed smelting processes in other metal sectors and finds that spillage from ladles is common and that these materials are routinely picked up within a short time and placed back into the process. The Agency thus concludes that molten metal spilled onto smelter floors is not a solid waste if it is picked up as practical (given heat and worker safety factors) and is then placed back into the smelting process. Such a material is not a secondary material (i.e. sludge, by-product, or spent material), but rather remains in process. This interpretation parallels existing rules, which say that a spilled commercial chemical product is not a solid waste if it is recycled within a reasonable amount of time (see 40 CFR 261.33 and 55 FR at 22671).

Industry commenters stated that spent smelter brick was similar to reverts since they are often returned back into recovery processes. If such spent bricks are stored before being recycled, they are not being immediately reused (nor are they still in process, since they are spent and physically removed). As noted in the Agency's May 1997 proposal, copper flue dusts, also are stored sometimes and not immediately recycled. Flue dusts not meeting the immediate reuse definition are defined as mineral processing secondary materials (usually a sludge, since these dusts are usually air pollution control residue) and would be eligible for the conditional exclusion to the definition of solid waste.

d. Relation to the Current Regulatory Definition of Solid Waste. (i) Distinctions among Sludges, By-products, and Spent Materials. The existing regulatory definition of solid waste classifies metal recovery operations as a type of reclamation activity, and then states that certain secondary materials being reclaimed are, or are not, solid wastes depending on the type of material being reclaimed. Spent materials being reclaimed are solid wastes, while characteristic sludges and by-products being reclaimed are not solid wastes. See, generally, 40 CFR 261.2(c)(3) and 50 FR at 633–34, 639–41 (January 4, 1985).

As EPA noted at proposal, these distinctions among types of secondary materials being reclaimed are not needed because they are not directly based on environmental distinctions. 61 FR at 2342. In this industry, at least, the distinctions do not relate to which of these materials may be part of the waste disposal problem.[6] The more environmentally meaningful distinction, and the one adopted here, is between land-based storage and storage in tanks, containers, and buildings.

In this rule, the Agency is, therefore, eliminating the regulatory distinctions between by-products, sludges and spent materials from mineral processing when these materials are reclaimed. Thus, under the amended rule, if any secondary material—sludge, by-product, or spent material—is legitimately reclaimed within the mineral processing industry, it is not a solid waste as long as all other conditions to the exclusion to the definition of solid waste are satisfied. EPA believes that this principle not only should encourage properly conducted recycling within the industry, but also fulfills an Agency objective of reducing some of the complexity in the existing regulatory definition of solid waste.[7]

[6] Put another way, the fact that a mineral processing secondary material is a sludge, rather than a spent material or by-product, does not convey any meaningful information as to the types of risks the material might pose if reclaimed.

[7] EPA does note the potential anomaly that non-mineral processing secondary materials, at least for the moment, will be regulated in some cases stringently than those generated and reclaimed within the mineral processing industry. This could come about because non-mineral processing industry sludges and by-products would still not be solid wastes if reclaimed, and so could be stored in land-based units before reclamation without being solid wastes. EPA has chosen, however, to address the broader issues regarding the regulatory definition of solid waste in a different rulemaking effort, which is proceeding on a different schedule from this rule. EPA believes that if may legitimately proceed one step at a time on these issues, and so is not precluded from making needed changes to the regulatory definition that affect only discrete industry segments, in this case, the mineral processing industry.

[8] This example assumes that legitimate recycling is occurring.

[9] The exclusion for return of secondary materials as feedstock was in fact adopted largely in order to exclude certain direct reclamation practices in the mineral processing industry. 50 FR at 639–40.

(ii) Other existing regulatory exclusions. The existing regulatory definition of solid waste also contains a series of exclusions in 40 CFR 261.2(e), two of which could apply to the mineral processing industry. Section 261.2(e)(1)(ii) excludes from the definition of solid waste sludges, by-products and spent materials (i.e. secondary materials) which are "used or reused as effective substitutes for commercial products." An example could be mineral processing acid plant blowdown substituting for commercial acid in another process (either mineral processing or a process in a different industrial category).[8] Commenters from industry questioned whether this provision is affected by the amendments relating to mineral processing secondary materials being reclaimed. The answer is that the provision remains as an independent basis for excluding secondary materials from Subtitle C. EPA did not propose to change it, and the issues involved, in any case, would be broader than the present proceeding since the basis for the exclusion does not rest on the notion of a continued process within an industry, but on comparability of secondary and virgin materials (see 50 FR at 619–20 and 637–41 (Jan. 4, 1985)).

The second existing exclusion, found at 261.2(e)(1)(iii), does overlap with the present rule. The exclusion is for secondary materials "returned [as a substitute for feedstock materials] to the original process from which they are generated, without first being reclaimed or land disposed." An example could be an emission control dust from primary smelting which is returned directly to the smelter for metal recovery without any interim land disposal.

This provision is essentially consistent with, but also subsumed by, today's final rule (with respect to the mineral processing industry). It is subsumed because the activity involved, return as a feedstock to a smelter, is a type of reclamation activity (see 50 FR at 639–40), the subject of this final rule.[9] The existing rule also contains a "no

UMI

1998
UMI

land disposal" condition similar to the conditions in this final rule (although today's rule excludes storage in piles in some circumstances, and so is more flexible than the current 261.2(e)(1)(iii) in this respect).

In light of this overlap, EPA is adding language to 261.2(e)(1)(iii) to indicate that there are special provisions relating to reclamation within the mineral processing industry (namely those adopted in today's final rule), and that these provisions define the scope of the exclusion for mineral processing secondary materials generated and reclaimed within the industry, including those which are returned to a mineral processing operation from which they are generated without first being reclaimed.

Today's rule also does not alter the regulatory status of recyclable materials that are reclaimed to recover economically significant amounts of gold, silver, platinum, iridium, osmium, rhodium, ruthenium, or any combination of them. 40 CFR 266.70. This rule was established to encourage recycling of precious metals. Commenters from the gold industry questioned whether this provision is affected by the amendments relating to mineral processing secondary materials being reclaimed. The answer is that today's rule redefines which secondary materials generated and reclaimed within the mineral processing industry are wastes, and so could exclude certain materials reclaimed within the precious metal industry which are now defined as solid wastes. However, to the extent any precious metal recovery operations remain subject to regulation after today's rule, the tailored regulatory provisions in 266.70 continue to apply.

e. Otherwise Excluded Mineral Processing Units Which Serve as Disposal Units. As the Agency noted in the original proposal, land-based units in the mineral processing industry not only can be related to a recovery process but also can serve as repositories of conventional wastes. 61 FR at 2340, 2342, 2347. That is, unusable solids settle in surface impoundments or are left in piles and in many cases these units become the ultimate repositories for these wastes. *Id.*

Under current rules, when an operating product storage unit that is a tank also contains a hazardous waste, the waste is not subject to regulation until it exits the unit. 40 CFR section 261.4 (c). An example would be a listed distillation column bottom remaining within the distillation column.

Section 261.4(c) does not apply to hazardous wastes which accumulate in land-based units. Thus, if wastes accumulate in piles or impoundments, if those wastes are hazardous (i.e. are listed or exhibit a characteristic of hazardous waste), and the wastes are not legitimately recycled, then the units are Subtitle C regulated units because they are being used to store or dispose of hazardous waste. The Agency is not altering this long-standing principle in the present rule (particularly given the central statutory finding that land-based units, and especially surface impoundments, "should be the least favored method for managing hazardous wastes'; RCRA section 1002(b)(7)). Consequently, any process impoundment that holds un-recycled hazardous accumulated solids, the impoundment is a regulated unit (i.e. subject to Subtitle C) because it is disposing of a hazardous waste. In addition, the same principle would apply to storage or process piles, which likewise are ineligible for the 261.4(c) exemption.

2. Scope of This Rule

This section of the preamble addresses the issue of which secondary materials come from "mineral processing" operations, and so are potentially within the scope of the conditional exclusion for mineral processing wastes being reclaimed within the mineral processing industry sector or in extraction/beneficiation operations. Newly identified wastes from mineral processing also are subject to the LDR prohibitions and treatment standards adopted today, and so this preamble section also clarifies the applicability of these LDR provisions.

a. Mineral Processing Wastes Covered by This Rule. The Agency's 1989 rule (see 54 FR 36592) applied the high volume/low toxicity criteria to determine which primary mineral processing wastes would retain the Bevill exclusion. This rule also clarified the Bevill status of beneficiation operations. Those mineral processing waste streams not meeting the high volume/low toxicity criteria are no longer Bevill exempt wastes and are subject to regulation under Subtitle C (except 20 mineral processing waste streams noted at 40 CFR 261.4). Non-exempt Bevill mineral processing wastes are "newly identified," and are now subject to the Land Disposal Restrictions, when land disposed. Therefore, only "newly identified" characteristic hazardous mineral processing wastes are potentially eligible for the conditional exclusion from the definition of solid waste.

EPA established in the 1989 rulemaking the factors it would use to determine whether a waste is generated from extraction/beneficiation versus mineral processing (see 54 FR 36592, 36616–20). The Agency has not and is not reopening this standard. However, EPA prepared and noticed a report—*Identification and Description of Mineral Processing Sectors and Waste Streams*—which tentatively applied this existing test on a waste-by-waste basis to wastes from 41 mineral sectors (62 FR at 2354).

There are two principal issues raised by this report: its legal status and its accuracy. First, the Agency has decided that the *Identification and Description of Mineral Processing Sectors and Waste Streams* report should be a guidance document. Thus, the Report is not a rule, and it, therefore, cannot be invoked as a definitive determination as to whether or not a particular waste is to be classified as being from mineral processing or from extraction/beneficiation. In addition, this report should not be viewed as an exclusive list of mineral processing and associated waste streams: other mineral processing waste streams may exist. Mineral processing facilities are obligated to determine the Bevill status of their wastes by utilizing applicable regulatory provisions, as clarified by the criteria articulated in 1989 in the **Federal Register** preamble cited above. Thus, because the document is guidance, no party could rely upon that document as the definitive basis for a regulatory determination.

The Agency has fully evaluated comments suggesting that the report contains factual inaccuracies, and believes that the Report, as now revised after review of public comments, is accurate and should therefore, provide useful guidance to the public. EPA disagrees with comments contenting that the Agency adopted new criteria in reaching the tentative conclusions set out in the Report. This is not the case—the same general approach used in 1989 was applied in the Report, and would have to be applied in making any actual regulatory determination.

One commenter argued that considering these determinations to be advisory would violate EPA's duty under section 3001(b)(3) of RCRA, as construed by the Court in *EDF V. EPA*, 852 F.2d 1316, 1331 (D.C. CIR 1988) to have made final determinations as to which mining wastes are subject to the Bevill exclusion. According to this commenter, reaching one conclusion at headquarters and a potentially different conclusion at EPA regions or States would undermine the intent of the Court's order in *EDF*. This commenter also asserted that such an approach would effectively allow States to

regulate less stringently than EPA, in violation of sections 3006 and 3009 of RCRA.

EPA believes that these comments are erroneous. EPA fulfilled some time ago its obligations under section 3001(b)(3) generally, and under the *EDF* decision in particular, to define the scope of the Bevill exclusion as it applied to mining wastes. See 51 Fed. Reg. 24496 (July 3, 1986); 54 Fed. Reg. 36592 (Sept. 1, 1989); 55 Fed. Reg. 2322 (Jan. 23, 1990); 56 Fed. Reg. 27300 (June 13, 1991). As discussed in those notices and rules, EPA's regulatory determination did not obviate the need to evaluate whether a particular waste was from mineral processing which, unless one of the 20 identified special mineral processing wastes, would not be exempt from Subtitle C under Bevill. Indeed, the Agency has extensively discussed the distinctions between beneficiation and mineral processing precisely to assist industry, EPA and the States in making such case-specific determinations. See 54 Fed. Reg. 36618–36619 (Sept. 1, 1989). Issuance of the Identification document in the record for this rulemaking is simply intended to aid the industry and regulators in making these decisions.

EPA acknowledges that the potential for inconsistent determinations exist; for this reason, EPA headquarters has assisted regional offices and States in making these determinations over the past decade. Section 3001(b)(3) does not, however, require the Agency to use rulemaking to make each and every decision. Those decisions that are very fact-specific may need to be made on a case-by-case basis using general criteria articulated nationally by EPA. It is precisely because of the fact-specific nature of such inquiries that EPA believes adopting the guidance document as "binding" would not be appropriate. Finally, nothing in EPA's approach is inconsistent with the RCRA requirement that authorized State programs be at least equivalent to and no less stringent than the federal program (see RCRA 3006 (b)).

b. Wastewater Treatment Surface Impoundments. EPA indicated at proposal that wastes managed in wastewater treatment surface impoundments would never be eligible for a conditional exclusion from the definition of solid waste. 62 FR at 2348. (A wastewater treatment surface impoundment is one whose ultimate discharge is regulated by the Clean Water Act, and can include zero discharge facilities.) This remains EPA's position, although the issue is no longer directly relevant to the final rule because no impoundments are eligible for exclusion. As the Agency noted at proposal, the essential purpose of these units is waste management rather than production. 62 FR at 2348. See also *AMC II*, where the D.C. Circuit held that wastewater treatment surface impoundments can be classified as waste management units, notwithstanding that all of the entrained solids in the unit were eventually recycled as feedstock at the generating plant. 907 F. 2d at 1186–87.[10]

c. Materials Outside the Scope. This rule limits the use of the conditional exclusion to the definition of solid waste to only those secondary mineral processing materials generated within primary mineral processing. The Agency identified over 40 mineral sectors which potentially generate mineral processing secondary materials subject to this rule. The scope of this rule is therefore quite broad. The Agency did not receive comments opposed to the Agency including them in this rule.

This rule also restricts the use of the conditional exclusion from the definition of solid waste to characteristically hazardous mineral processing materials. Thus, no listed hazardous wastes can qualify for the conditional exclusion.

The National Mining Association (NMA) and the Metals Industry Recycling Coalition submitted comments urging the Agency to broaden the scope of the rule to include metal-bearing wastes generated outside of primary mineral processing as well as allowing the reprocessing of listed hazardous wastes. The Agency is not extending the exclusion contained in this rule because the Agency did not propose addressing wastes generated outside of primary mineral processing, since at the time of proposal the Agency indicated that these wastes would be addressed under a different rulemaking. While metal-bearing wastes generated outside of primary mineral processing, and listed hazardous wastes are not within the scope of this rule, the Agency will continue to assess how best to encourage their legitimate recycling.

Commenters indicated they were unsure how this rule would affect the application of 40 CFR 261.2 to secondary materials generated from outside the mineral processing industry sector. As discussed earlier in the preamble, today's rule does not amend § 261.2 for any secondary materials other than those generated within the mineral processing sector. Thus, when fully implemented, a mineral processing facility can use the conditional exclusion to the definition of solid wastes and can utilize § 261.2 to recycle other wastes.

3. Mineral Processing Secondary Material Volumes and Environmental Damages

a. Volume of Secondary Materials and Large Volume Exemption. In the Agency's May 1997 proposal, land placement of secondary mineral processing materials would be prohibited except for materials exceeding the high volume criteria (45,000 tons per facility waste stream per year for solid wastes and one million tons per facility per waste stream per year for liquids). The May 1997 proposal would have allowed high volume secondary materials to be placed in land-based units if those units meet the integrity standards noted in the January proposal and meet other proposed conditions. In today's rule, the Agency is adopting a no land placement condition for mineral processing secondary materials without any volume exemption.

As noted in the May 1997 proposal (see 62 FR at 26049), the Agency reevaluated the volumes of mineral processing secondary materials as a result of comments submitted by public interest groups which asserted that volumes of these materials were considerably less than EPA originally believed (see *Characterization of Mineral Processing Wastes and Materials*, U.S. EPA, 1998). Based on this reevaluation, the Agency finds that mineral processing wastes are not generated in the high volumes that we previously believed to be the case. EPA found that of the 119 hazardous wastes streams it studied, 117 were generated in volumes lower than the proposed high volume cutoff. Further, comments from public interest groups on the Agency's May 1997 proposal indicate that two remaining waste streams that

[10] Waters in these impoundments are often recycled back into processes for their value as water. Recycling of wastewaters may be currently allowed under the effective substitute clause in the regulatory definition of solid waste (see 40 CFR 261.2(e)(1)(ii)), a provision unaffected by today's amendments. However, EPA reads *AMC II* and its regulations to state that impoundments where some wastewaters are returned to a process as an effective substitute for a commercial product, but which also function as wastewater treatment impoundments, would be regulated units (assuming there are hazardous wastes in the unit). This is because the unit would necessarily be functioning at least partially as a disposal unit (since wastewaters are ultimately discharged). In addition, the product storage regulatory exemption at 40 CFR 261.4(c) does not apply to surface impoundments. Notwithstanding industry comments that recycling of wastewater should be encouraged, the Agency notes the stronger policy in RCRA to assure that surface impoundments managing hazardous waste are managed so as to operate protectively. *AMC II*, 907 F.2d at 1187 and sources there cited.

the Agency had classified as high volume may not in fact meet the high volume cutoff. The Agency reassessed how it estimated the volumes of these waste streams and acknowledges that it used very conservative approaches to estimate these volumes. It is, therefore, possible that none of the 119 waste streams studied meet the high volume cutoff. The Agency proposed using the high volume cutoff as an indicator that land storage may be an economic necessity because when volumes are high, alternatives to land placement are costly and not practical. In fact, the Agency now finds that mineral processing secondary materials are generated at volumes where there is no reason that they cannot be managed in non-land based units (except for solids placed on approved pads).

Industry comments maintained that it is impractical to place mineral processing secondary materials in tanks, containers, and buildings. Based on the storage of similar volumes and types of hazardous wastes generated in other industries, the Agency does not agree. The Agency presented its analyses of volumes in its report entitled, *Characterization of Mineral Processing Wastes and Materials*, 1997. This report noted that listed hazardous wastes, such as spent potliners, and electric arc furnace dusts, are generated at volumes which generally exceed that of mineral processing secondary materials yet are stored in tanks and buildings. Further, this report noted that the volumes generated by other industries that use tanks, containers, and buildings to store hazardous wastes are not substantially different than volumes generated by the mineral processing industry.

b. Reliability of Damage and Environmental Release Reports. Industry commenters to the May 12, 1997 proposal sought to refute or minimize the degree of contamination caused by the land storage of mineral processing secondary materials. Despite these objections, the Agency still finds that land-based storage and management practices of mineral processing secondary materials and wastes can or may create or exacerbate soil and ground water contamination.

The Agency issued two separate reports in 1995 and 1997 (Office of Solid Waste, U.S. EPA, *Human Health and Environmental Damages from Mining and Mineral Processing Wastes* (1995), and Office of Solid Waste, U.S. EPA, *Damage Cases and Environmental Releases* (1997)) which presented information on damage cases and environmental releases of mineral processing and mining wastes. The data tended to fall into two general classes: (1) information that illustrates that environmental damages have occurred, and (2) information that discusses the types and magnitude of mineral processing materials that have been released into the environment. In some cases, a combination of feedstock, in-process materials, secondary materials, and wastes contribute to ground water, surface water, or soil contamination. Also, in some cases, contamination occurred through episodic or continuing mismanagement of hazardous and other solid wastes (e.g., commercial chemical spills). Industry commenters objected to the use of these damage cases contending that they reflect historic practices and not current operations.

The Agency disagrees that storage of mineral processing wastes, and in some cases secondary materials, on the ground, which was reflected in these reports, no longer occurs. After careful reevaluation, the Agency finds that the record and, in particular, these reports, clearly indicate that the storage on the ground of mineral processing wastes and secondary materials continues as a management practice and has caused environmental damage or has the potential to do so. These reports identify cases where mineral processing wastes and secondary materials were eroded by rain, were carried by wind, or, in the case of surface impoundments, migrated to contaminate ground water. The vast majority of newly identified mineral processing wastes are liquids and their placement in impoundments presents actual or potential threats to the environment. The Agency concludes that placement of secondary mineral processing materials in impoundments may contribute to the waste management problem.[11]

EPA is also not impressed by comments stating that most of the damage incidents involved wastes no longer utilized within a process, not secondary materials awaiting reclamation, and therefore are irrelevant to this rule. The damage incidents certainly show that when hazardous mining and mineral processing wastes and mineral processing secondary materials are stored in piles or in surface impoundments, hazardous constituent releases and consequent damage has occurred in this industry. Piles and impoundments do not automatically become safer if the materials stored in them are secondary materials awaiting recycling rather than wastes. Rather, the risk comes from the nature of the storage unit.

The Agency compared the toxic and hazardous properties of newly identified mineral processing wastes with a limited number of RCRA listed hazardous wastes in the 1997 technical background document, *Characterization of Mineral Processing Wastes and Materials*. This report was used to support the May 1997 proposal. In order to easily compare the listed waste leachate concentrations with the leachate concentrations of the newly identified mineral processing wastes, a combined mean and maximum range of chromium, cadmium, and lead concentrations for the seven listed wastes were calculated. The mean leachate concentrations for chromium, cadmium, and lead range from 6.03 mg/l to 273.23 mg/l, <0.01 mg/l to 117.5 mg/l, and 1.47 mg/l to 259.83 mg/l, respectively. Likewise, the maximum leachate concentrations for chromium, cadmium, and lead range from 12 mg/l to 4250 mg/l, <0.01 mg/l to 268 mg/l, and 2.10 mg/l to 1550 mg/l, respectively. The report then compared the ranges in constituent concentrations exhibited by the listed wastes and the newly identified mineral processing wastes. The report states that 15 of the 23 mineral processing wastes exhibit leachate concentrations of chromium, cadmium, and lead at levels that are equal to or greater than those levels exhibited by the seven listed wastes. Therefore, the Agency has concluded that some mineral processing secondary materials exhibit hazardous properties similar to listed hazardous wastes, and have the same or greater potential of leaching metals into the environment when they are improperly placed on the land.

In addition, mineral processing secondary materials often contain metal compounds and other constituents which, due to processing steps, become more mobile in the environment (see 54 FR 36614–36619, September 1, 1989). By the very nature of mineral processing, heavy metals are continuously concentrated and waste streams tend to contain higher metal loadings than those found in raw ore. Since the resultant wastes have higher concentrations of metals, they likewise have a higher potential to leach higher concentrations of metals into the environment if they are not adequately stored. Finally, the record also shows that a wide range of mineral processing secondary materials are released into the environment. Such releases do not necessarily mean that environmental

[11] Of course, those mineral processing facilities that have in fact improved their storage practices for mineral processing secondary materials being reclaimed by using tanks, containers, or buildings instead of impoundments to store secondary materials would be essentially unaffected by this rule, since such units would be excluded from regulations.

damage has occurred; however, the Agency believes it must take appropriate steps to minimize such releases to reduce the potential for damage to occur, just as the Agency does with other hazardous wastes. RCRA is a preventive statute, designed to assure safe management of hazardous waste from cradle to grave to prevent the need for remediating releases. Based on the information noted above, the Agency therefore has finalized in today's rule a "no land placement" condition for the storage of mineral processing secondary materials.

Comments from public interest groups pointed out that a considerable amount of information shows that releases result from fugitive dusts and that control of dusts was not adequately addressed in the proposals. The Agency agrees that the release of fugitive dust should be addressed and believes that placement in tanks, containers or buildings will adequately address this concern. Mineral processing secondary materials stored in tanks or containers must be stored in a manner which effectively manages fugitive emissions. Moreover, as at proposal, if the site-specific pile approval process is utilized, the possibility of harm via an air exposure must be considered, and, if necessary, controlled. See 62 FR at 2372 (proposed 261.4(a)(15)(iv)(A)(3)).

4. Conditions to the Exclusion

In the January 1996 and May 1997 proposals, the Agency sought comment on how to establish a conditional exclusion to the definition of solid waste which would encourage recycling of mineral processing secondary materials and be protective. In today's rule the Agency is establishing a conditional exclusion to the definition of solid waste. The conditions relate to legitimacy of recycling, land placement, speculative accumulation, and notification, and are discussed below.

a. Legitimacy. It goes virtually without saying that only mineral processing secondary materials which are reclaimed legitimately would be excluded under today's rule. This is because sham recycling is simply waste treatment or disposal conducted under the guise of recycling. *See U.S. v. Self,* 2 F. 3d 1071, 1079 (10th Cir. 1993).

The Agency currently uses a qualitative approach for determining whether a material is being legitimately recycled. Factors the Agency considers typically relevant in making such determinations are found at 50 FR 638 (Jan. 4, 1985); 53 FR 522(Jan. 8, 1988); 56 FR 7145, 7185 (Feb. 21. 1991). Use of these factors to assess whether a particular activity is to be viewed as recycling rather than treatment or disposal was emphatically sustained by the Court in *Marine Shale Processors v. EPA*, 81 F. 3d 1371, 1381–83 (5th Cir. 1996) and *United States v. Marine Shale Processors*, 81 F. 3d 1361, 1366(5th Cir. 1996).

The main issue in this rulemaking was whether the Agency should develop quantified criteria for use in assessing legitimacy of reclamation activities within the mineral processing industry. The Agency proposed quantitative criteria including the potential use of an ore grade cut-off, normal operating range, efficiency standard, and an economic test. 62 FR at 2342–44. In addition to metal values, the Agency also solicited comment on legitimate recycling of acid, water, and other values.

The mineral processing industry noted in their comments that their products must meet international quality standards and they would not risk affecting product quality by introducing materials which would adversely affect that quality, and therefore that legitimacy can be assumed in essentially all cases. They also opposed the proposed quantified criteria.

While the Agency agrees that market forces generally may limit the introduction of materials which could adversely affect product quality, mineral processing facilities by their nature process large volumes of materials, EPA is concerned that small volumes of wastes could be placed into processes without contributing mineral values in order to treat or dispose of them. Obviously, this is not recycling, as noted by the Court in *U.S. v. Marine Shale Processors*, 81 F. 3d at 1366. The Agency, therefore, does not agree that there is no need to apply some type of reasonable legitimacy criteria.

Industry commenters also noted that application of quantitative criteria would be burdensome, are not necessary, and could not be effectively implemented. The Agency agrees that implementation of the proposed quantitative tests would have required significant testing of materials (and resultant costs) and that due to uncertainty in evaluating test results, companies may decide not to recycle any materials to protect the Bevill status of their resultant wastes. Application of an ore grade cutoff criteria could restrict the gold industry's ability to recover gold values from secondary materials that contain gold at levels below those found in ore. Such recovery could nevertheless be cost effective. Industry commenters stated that the application of a normal operating range test would be difficult to implement since operating parameters at large mineral processing facilities change often related to differences in feed. There also was little support from industry for the proposed efficiency test because such facilities may be recovering a specific metal at one recovery rate while they are recovering other metals at a different rates. Industry commenters also rejected the proposed use of an economic test because recycling need not be profitable to be legitimate. They specifically pointed out the cases where recycling was economical only relative to disposal, and yet, the company was legitimately reusing the recycled materials.

For these reasons the Agency has declined to adopt any of the proposed quantitative tests. In today's rule, the Agency is not adopting quantitative criteria and will continue to use the qualitative approach for evaluating whether an activity is legitimate recycling. In addition, the Agency believes that legitimate recycling may occur for reasons other than to recover metal values— recovery of acids, cyanide, or water, for example. With no quantitative tests for such recycling, the Agency believes the qualitative criteria best cover the broad array of situations being addressed. Situations most likely to be deemed sham recycling would, thus, be those involving low amounts of recoverable material plus the presence of non-contributing hazardous constituents in the waste (particularly hazardous constituents not otherwise present in the normal feedstock of the process). See generally, 53 FR at 522(January 8, 1988).

b. Design and Construction Standards. In the January 1996 proposal, the Agency assumed that land-based storage of mineral processing secondary materials was a necessity within the mineral processing sector, and proposed three different types of conditional mechanisms whereby these land-based units could be deemed "process units" that would be excluded from Subtitle C jurisdiction. 62 FR at 2345–48. More specifically, these alternative conditions were an environmental performance standard, a design and operating standard, or an ad hoc, site-specific standard developed by an EPA Region or authorized State. The environmental performance standard would have used a ground water protection standard as a determinant of whether a land-based unit was involved in discard. If ground water monitoring determined that there was an exceedance of the MCL (background levels if background exceeded the MCL) at a designated point of compliance,

then the unit would be required to implement unit-specific corrective action. 62 FR at 2345–46.

The Agency also proposed, in lieu of compliance with the ground water standard, design and construction standards. EPA proposed that surface impoundments be constructed with a transmissivity equivalent to a 40 mil geomembrane liner placed on top of 12 inches of a material with a 10–5 hydraulic conductivity. Piles could be constructed on concrete, asphalt, or soil any of which would have to have the equivalent transmissivity of three feet of clay with 10–7 cm/sec hydraulic conductivity. *Id.* at 2346.

The final alternative allowed for an authorized State or EPA Region to make a site-specific determination that the unit can be operated in a manner that is protective. The Agency proposed this option to allow for flexibility because there are a range of site-specific characteristics, such as depth to groundwater and rainfall, which can affect the design of a unit and affect the risks posed by such units. *Id.* at 2347.

EPA finds now, however, that the premise of volumetric necessity was mistaken (see the earlier section of this preamble). As such, the Agency is adopting its traditional jurisdictional demarcation point of not allowing exclusions for land-based storage units. As discussed earlier, land-based storage units are so fraught with indicia of discard—including elements of outright disposal via both air and groundwater exposure pathways (borne out by damage cases as well), plus no longer being part of the actual production operation—that EPA views this demarcation as strongly justified once it is clear that there is no necessity to use such units. The sole exception in the final rule which allows for conditional exclusion for a land-based storage unit is for piles resting on pads which are approved by an authorized State or EPA Region, as discussed in the section below.

c. Units Eligible for Conditional Exclusion and Conditions Attached to Such Units. (i) Tanks, Containers and Buildings. Today's rule states that mineral processing secondary materials reclaimed within the industry can be excluded if they are stored in any of the following: tanks, containers, buildings, or piles resting on pads when such piles are evaluated and approved on a site-specific basis by an authorized State or EPA Region. (As noted in the May 12, 1997 proposal, this is conceptually the same as the rule EPA proposed for the oil-bearing secondary materials generated by and recycled within the petroleum industry. See 62 FR at 26048 (May 12, 1997) and 60 FR 57753 (November 20, 1995)). Tanks, containers, building, and approved pads do not have to meet the design and operating standards for units storing RCRA Subtitle C wastes.

EPA also is adopting certain minimal conditions on these units' design to assure basic unit integrity and so assure that tanks, containers, and buildings do not serve as conduits for massive material release (i.e. disposal units). An acceptable tank must be free standing and not be a surface impoundment, and be manufactured of a material suitable for containment of its contents. An acceptable container must be free standing and be manufactured of a material suitable for containment of its contents. An acceptable building must be a man-made structure and have floors constructed from non-earthen materials, have walls, and have a roof suitable for diverting rainwater away from the foundation. A building may also have doors or removable sections to enable trucks or machines access. The Agency's technical report *Non-RCRA Tanks, Containers, and Buildings*, U.S. EPA, 1998, provides examples of acceptable units for the storage of mineral processing secondary materials.

EPA disagrees with comments from public interest groups stating that nothing short of RCRA Subtitle C standards could assure protectiveness and so demonstrate that these non-land-based storage units were not part of the waste management problem. The plenary conditions urged by the public interest group commenters are indeed those necessary for protective management of hazardous wastes, but the Agency's task here is different. It is to delineate discard from non-discard (i.e. wastes from non-wastes), and, as noted at proposal, not only is this a different test than determining protective waste management conditions, but there are jurisdictional constraints on the types of conditions EPA can impose when considering the situation presented here, i.e., secondary materials generated and reclaimed within a single industry sector. 62 FR at 2342. Thus, the conditions EPA is adopting are designed to assure that these units are not essentially sieves functioning as means of disposal.

The Agency discussed its definition of non-RCRA tanks, containers and buildings in its Technical Background Document (See 62 FR at 26050, *Non-RCRA Tanks Containers, and Buildings*, 1997). *Industry* commenters requested clarification on whether their smelter or refiner buildings would meet the definition of "building" if tanks, containers or buildings were required. As set out in the final rule, a building is a structure with four walls, a roof, and floor constructed of non-earthen materials. Smelter and refinery buildings are quite large and include floor areas which, in part, use earthen materials. As long as mineral processing secondary materials (i.e. those sludges, by-products, and spent materials which would otherwise be identified as hazardous wastes) are stored in those sections of the smelter and refinery building that do have floors constructed of non-earthen materials, these structures would qualify for the exclusion included in today's rule as non-RCRA buildings.

Industry commenters also noted that the Agency made reference to tanks and containers having to meet applicable industry standards for their construction and operation, such as those established by the American Society of Testing Materials (ASTM) or the American Petroleum Institute (API)(See 62 FR at 26050). They pointed out that API standards deal specifically with tanks, while ASTM standards relate more specifically to testing procedures. The commenters argued that units storing mineral processing secondary materials do not need to comply with these standards to be safe. The Agency agrees that the references to applicable industry standards such as ASTM and API were overly broad and has not included them in today's rule. Industry commenters requested clarification on whether tanks and containers needed covers to meet the condition of "no land placement." The Agency expects that the storage of mineral processing secondary materials will prevent uncontrolled fugitive emissions. Tanks and containers do not need covers as long as the materials stored in them are managed to reduce fugitive emissions. The facility operator will therefore need to determine if covers are needed to effectively control fugitive emissions. For example, tanks and containers placed inside buildings may not need covers.

The gold and copper industries stated that their secondary materials would meet legitimacy conditions and that they do not need to store these materials prior to placement back onto gold heap leaches or copper dump leaches. The final rule indicates that process units, as opposed to storage units, are excluded from RCRA Subtitle C. EPA believes that the heap and dump leach units are process units, notwithstanding the fact that they are land-based. This is because dump and heap leach piles simultaneously produce products and waste. The issue is also academic with respect to these units. This is because

the Agency determined that these units are extraction/beneficiation activities in 1986 and reiterated that position in 1989 (see 51 FR 24496 and 54 FR 36592), and their Bevill regulatory status is unchanged by today's rule. Thus, if the heap leach pile becomes a disposal unit because wastes remain there permanently, those wastes presently have Bevill status. The Agency continues to be concerned that there may be environmental risks related to dump and heap leaching, but has determined that this rule is not the appropriate means to address those concerns.

Industry commenters also raised concern that under the "no land placement" option, described in the May 1997 proposal, they would no longer be able to place slags on the ground. This is an incorrect reading of the regulations and the proposals since at 40 CFR 261.4(b)(7), iron and steel, copper, lead, zinc, and elemental phosphorus slags are all classified as Bevill exempt mineral processing wastes and would not be affected by this rule. The management of these slags on the ground can continue as long as they meet other applicable federal and state regulations.

(ii) Solid Mineral Processing Secondary Materials Resting On Pads. As noted, EPA proposed at 61 FR 2346 to allow land-based units which had been approved as protective on a site-specific basis by an authorized State or EPA Region. The Agency is retaining a portion of that proposal in the final rule in order to allow solid mineral processing secondary materials resting on pads to be used for storage of mineral processing secondary materials being reclaimed within the industry. The Agency defines "solid mineral processing secondary materials" as those mineral processing secondary materials containing no free liquids. The provision functions effectively as a variance to allow conditionally excluded storage using pads to occur.

Industry comments pointed out that there are materials which can be placed on concrete or asphalt pads in a manner that provides the equivalent protection of a tank, container, or building. The Agency is aware that in the arid Southwest, the copper industry places materials on pads to dry them prior to their reentry into processes. The Agency agrees with industry comments that a degree of flexibility is needed regarding the storage of solid mineral processing secondary materials in this sector, particularly given the number of such storage units presently used in arid conditions, and (to a lesser degree of importance) given the number of existing piles used by this industry which conceivably could be upgraded to operate protectively and for which a more flexible approach could be warranted.[12]

In today's rule EPA is adopting a provision whereby persons storing only solid mineral processing secondary materials (those mineral processing secondary materials containing no free liquids) on pads prior to legitimate reclamation in a mineral processing process may seek a determination from an authorized State or (if the pile is located in an unauthorized State) EPA Region such that the unit is approved as protective and materials stored in the unit are conditionally excluded from the regulatory definition of solid waste provided that the pad is not serving as a mode of discard.

Minimum design criteria for pads are as follows; (1) Pads must be designed of non-earthen materials which are compatible with the chemical nature of the mineral processing secondary material being stored, (2) Pads must be capable of withstanding physical stresses associated with placement and removal, (3) Pads must have run on/runoff controls, (4) Pads must be operated in a manner which controls fugitive dust, and (5) Owner/operators must conduct inspections and maintenance programs to ensure the integrity of the pads.

The decision-maker would evaluate the application for storage on pads against a general environmental performance standard: whether the pad is located, designed, constructed and operated so as to be protective of human health and the environment and is not used for disposal. A broad benchmark of performance would be that the approved pad must afford the same degree of protectiveness as non-RCRA tanks, containers and buildings eligible for exclusion.

The decision-maker would have to consider potential releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, air exposure pathways are:

- —The volume and physical and chemical properties of the secondary material, including its potential for migration off the pad;
- —The potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway, and the possibility and extent of harm to human and environmental receptors via each exposure pathway.[13]

Thus, under this regime, a State could approve placement of solid mineral processing secondary materials (those materials containing no free liquids) on a pad where, after consideration of relevant exposure pathways, a determination is made that the mode of storage will not adversely affect human health and the environment, and where the operator has demonstrated compliance with the minimum design and operating criteria. Approval would be more problematic if a pad was located in an area which experiences flooding, or in an area where ground water was close to the surface and used for drinking water purposes.

The Agency is confident that site-specific determinations can be accomplished as part of existing State regulatory programs. The situations eligible for this variance are considerably more circumscribed than at proposal, and the decision criteria consequently more focused, meeting some of the objections in comments from public interest groups on the proposals. Today's rule only allows the placement of mineral processing secondary materials that are physical solids, and the rule also specifies certain minimum conditions such pads must meet to be approved. Further, the rule identifies the factors a State must consider prior to making such determinations. The Agency will review a State's regulatory authorities it intends to use in implementing this determination to assure that an authorized state can effectively implement this element of the rule.

As proposed, EPA is requiring that there be opportunity for public participation in the evaluation and approval process of pads storing solid mineral processing secondary materials. 62 FR at 2366. The Agency believes it is important that those citizens who may be directly affected by these determinations be notified of them and

[12] EPA has not provided for this type of site-specific approval of land-based storage units in other rules providing for conditioned exclusion from the regulatory definition of solid waste. In some cases, this is because management of solids was not at issue (proposed petroleum listing rule and rules on recovered oil), or the industry sector did not use piles for solids management (steel industry coke-byproducts listing rule). As noted in the text above, EPA believes that there are certain factors peculiar to the mineral processing industry that have persuaded EPA to allow for a site-specific authorization process, but this provision should not be considered to be a precedent for any other industry sector.

[13] As proposed, these general decision factors are drawn from the environmental performance standard in the row-revoked 40 CFR 267.10.62 FR at 2347. Commenters noted correctly that Part 267 is no longer codified, so that these requirements should not be placed in regulatory language (or preamble) by means of a cross-reference to the revoked provisions.

participate in the process, and notes further that this requirement is fully consistent with RCRA's strong preference for public participation. See RCRA section 7004(b).

On the other hand, EPA is not adopting any site-specific approval process for storage of mineral processing secondary materials in surface impoundments. The Agency has concluded that storage in impoundments would likely lead to their contributing to the waste management problem. Many damage incidents in this industry involve the use of impoundments (see damage case on phosphorus impoundments in Idaho). Furthermore, the Agency has determined that there are no engineering or economic constraints on requiring liquid mineral processing secondary materials to be placed in tanks.

d. Speculative Accumulation. In this rule, the Agency is establishing a condition that mineral processing secondary materials cannot be accumulated speculatively as defined in 40 CFR 261.1(c)(8). EPA proposed this condition, 61 FR at 2372, and indeed, this condition already applies to every other secondary material being recycled which is excluded from being a solid waste. See, e.g., 261.2 (e). Industry comments noted that the 12-month limit on speculative accumulation was overly restrictive and that many mineral processing secondary materials need to be stored until economic conditions warrant their recycling. The Agency rejects these comments because no data were presented that would indicate that the volumes of materials being generated could not be efficiently recycled within a 12-month period. In the 12 years the speculative accumulation provision has been in effect, the Agency is unaware of other industries suffering economic burdens by complying with the limits placed on speculative accumulation. Nor is EPA aware of any mineral processing facility which has applied, pursuant to the variance provision in 40 CFR 260.30(a) and 260.31(a) (which allow an extension of the 12-month speculative accumulation period), to extend the existing 12-month requirement for currently excluded mineral processing secondary materials (like unlisted sludges and by-products). The Agency infers that the existing 12-month requirement is not imposing any type of significant constraint on this industry.

e. One Time Notification. EPA proposed that mineral processing plants generating mineral processing secondary materials and utilizing the conditional exclusion to the definition of solid waste provide EPA (or an authorized State) with a one-time notification which describes the mineral processing materials to be recycled and the recycling processes being used. (See 61 FR at 2345). The Agency is finalizing this provision in today's rule. It applies to any facility utilizing the conditional exclusion.

Today's rule requires that the one time notification must specify the types and amounts of mineral processing secondary materials to be recycled and the location and type of unit storing mineral processing secondary material. The notice should be submitted to the appropriate EPA regional office or authorized State. An amended notification would not be required unless the facility has significant process changes affecting the generation, location, or recovery of mineral processing secondary materials.

The reason the provision is needed is to assure that the conditioned-exclusion approach in today's rule can be feasibly implemented. To do so, EPA or States must know what secondary materials are being stored, and where storage is occurring, in order to determine whether the other conditions in the rule are being satisfied. As described above, these other conditions are necessary to assure that secondary material storage within the industry does not become part of the waste management problem. In this very real sense, the notification condition is likewise necessary to assure that the storage is not part of the waste management problem, since notification is necessary to successfully implement the other conditions.

Industry comments opposed this condition, not so much on grounds of unreasonable burden, but based on the argument that the Agency lacks legal authority over non-waste activities. Since EPA finds that the notification condition is an integral part of a group of conditions necessary to assure that storage of these hazardous secondary materials does not become part of the waste management problem, EPA has legal authority to adopt it. In addition, the Agency notes that RCRA section 3007(a) provides authority to enter facilities and obtain information needed to assist in the enforcing of provisions of Subtitle C. This provision can reasonably be read to apply to gathering information to determine whether or not a particular hazardous secondary material is a waste. The notification condition obtains this same type of information by regulatory condition. The Agency thus believes that section 3007(a) (implemented here by rule, pursuant to the Agency's general rulemaking authority under RCRA section 2002(a)) likewise provides authority to adopt this condition.

In the January 1996 proposal, the Agency solicited comment on whether a Facility Operating Plan should be required for facilities that generate, store, or process hazardous mineral processing secondary materials. (See 61 FR at 2345) Under this approach, a Facility Operating Plan would include: a spill prevention plan and procedures; types, quantities, and analysis of recycled materials; product specifications; speculative accumulation and storage requirements; closure plan; and record keeping and reporting for off-site shipments. In today's rule, the Agency is not requiring the preparation of such a plan. This requirement is not necessary given the burden of proof under existing 40 CFR section 261.2(f) that a facility must meet to comply with the conditions of legitimacy, containment, and speculative accumulation. The Agency does, however, strongly encourage facilities to develop a plan or at least components of a plan as part of responsible environmental management.

5. Bevill Related Issues

a. Uniquely Associated. Under the Agency's longstanding interpretation of the Act, the Bevill amendment applies to special wastes that are uniquely associated with extraction/beneficiation and certain mineral processing activities. Because the decision whether a particular waste is uniquely associated may determine whether a particular waste is subject to Subtitle C controls, the Agency believed that it was important and useful to receive public input regarding the manner in which EPA and authorized States apply this principle and solicited comment regarding the criterion for determining whether a waste is uniquely associated with mineral operations. The Agency has described non-uniquely associated wastes at 45 FR 76619, November 19, 1980 and 54 FR 36623, September 1, 1989. In the May 1997 proposal, the Agency noted examples of non-uniquely associated wastes, which include spent solvents, pesticide wastes, and discarded commercial chemicals. As stated in the May 1997 proposal, in the Agency's view, these wastes are logically viewed as not being "from" extraction, beneficiation, or mineral processing, and, therefore, are not subject to the Bevill exclusion. (See 62 FR 26054–56, May 12, 1997).

In May 1997, the Agency proposed several alternative approaches to determining whether a waste was uniquely associated. One option to determine if a waste is uniquely

associated was the simple application of the high volume threshold used in the Agency's 1989 rulemaking. Under this option, the volume criterion would obviate the need to consider the uniquely associated principle further.

The Agency based this option on the fact that Congress and the courts have established that only large volume special wastes should be eligible for the Bevill exclusion (62 FR 26041, May 12, 1991; *Environmental Defense Fund* v. *EPA*, 852 F.2d 1316 (D.C. Cir 1988), *cert. denied* 489 U.S. 1011, *Solite Corporation* v. *EPA*, 952 F.2d 473, 494–495 (D.C. Cir 1991)). The Agency reasoned that a large volume criterion is simple to apply and is consistent with the broad parameters of Congressional intent. Further, this approach would help prevent additional toxic constituents from being disposed with Bevill wastes, potentially encouraging recycling, and may result in reduction of cleanup costs.

Industry commenters voiced strong opposition to the use of a volume criterion to determine whether a waste was uniquely associated. Commenters stated that the Bevill exclusion was intended to exempt all mining wastes, regardless of their volume or toxicity. As the regulatory history of EPA's implementation of the Bevill exemption makes clear, however, this is not the case. (see 54 FR 36592, September 1, 1989).

Nonetheless, while the Agency has used volume to make certain Bevill determinations, it has not in the past used the high volume criterion to make uniquely associated determinations. The Agency assessed the impact of applying a high volume criteria in making uniquely associated determinations and found that such an application would make virtually all such wastes non-uniquely associated and subject to Subtitle C controls, regardless of the extent to which the waste was, in fact, associated with mining and mineral processing. EPA does not believe that it would be appropriate to ignore altogether the extent to which a particular waste is associated with mining and mineral processing activities that are subject to the Bevill exclusion, since that exclusion on its face applies to wastes *from* those processes. In addition, the Agency believes that a certain degree of flexibility is needed for making uniquely associated determinations due to the complex and varied mineral operations and site-specific factors that must be considered in making these decisions. In today's rule, the Agency is, therefore, not adopting the use of a volume criterion to determine whether a waste is uniquely associated.

The Agency also proposed an option where a waste would be uniquely associated if it came into direct contact with an ore or mineral or wastes from the extraction, beneficiation, or processing of ores and minerals. Several commenters expressed the view that, while contact can be one useful indicator of whether a waste is uniquely associated with mining, such contact should not be required in all cases. These commenters believed that the test should be whether the conduct of mining and mineral processing necessitates the generation of a particular waste; if so, then the waste should be considered uniquely associated. Other commenters believed that the "contact" principle was potentially overly broad, since it would have the potential to sweep into Bevill wastes that typically would not be considered uniquely associated. As proposed, however, the contact option would consider only contact that occurred as part of a processing operation.

After consideration of public comments, the Agency has concluded that a strict application of the "contact" principle, while appealing because of its simplicity, would not provide the best means of determining whether a waste is uniquely associated with mining or mineral processing. The Agency is concerned that, while contact may be one indicator of when a waste is associated with the mineral recovery process where, for example, the contact with the process imparts chemical characteristics to the waste, EPA agrees with commenters that simple application of the contact principle has the potential to be over-inclusive of wastes that are properly viewed as "uniquely associated." The Agency has not, therefore, adopted that criterion as being determinative of whether a waste is uniquely associated.

The other option in the May 1997 proposal would modify the contact principle to exclude, as non-uniquely associated, wastes that only exhibit the same hazardous characteristic both before and after contact with the Bevill waste, feedstock, or product. This "modified contact" approach may reduce the potential for Bevill wastes to be dumping grounds for non-Bevill hazardous wastes. Under this approach, wastes that are inherently hazardous prior to contact with a Bevill waste, and which retain the same hazardous characteristic after contact, would be subject to Subtitle C regulation when discarded.

Commenters pointed out that the Agency had never before proposed to use the hazardous characteristic to determine whether a waste was uniquely associated, nor had the Agency used this criterion in making uniquely associated determinations since 1980. They also pointed out that the Agency had already studied the hazardous characteristics of uniquely associated wastes but nevertheless stated that these wastes should not be subject to RCRA Subtitle C (51 FR 24496).

Some commenters also contended that the real issue is whether the waste is indigenous to the mining and mineral recovery process—i.e., whether it is necessary to generate the waste in order to conduct the process—and that the hazardousness of a material prior to its use in the process is, therefore, irrelevant.

EPA agrees, in part, with these commenters that the characteristics of a material (i.e., whether it is hazardous) prior to use in mineral recovery processes should not be solely determinative of whether the wastes are "uniquely associated." As a general matter, the closer the nexus between a particular waste and the mineral recovery process, the more likely it is "uniquely associated" within the meaning of Bevill. The Agency recognizes, however, that one fact that might help evaluate the relationship between a particular waste and the mineral recovery process is the extent to which the properties of a particular waste can be attributed to the process itself. Thus, while the Agency does not believe that hazardousness of a material prior to use in the mineral recovery process should be determinative of its Bevill status after use, the extent to which the material has acquired attributes through its involvement in that process is relevant.

Based on consideration of all the public comments, the Agency believes that it is appropriate to evaluate whether a particular waste is uniquely associated with mining and mineral processing as follows. First, any waste from ancillary operations are not "uniquely associated" because they are not properly viewed as being "from" mining or mineral processing. In evaluating wastes from non-ancillary operations, one must consider the extent to which the waste originates or derives from processes that serve to remove mineral values from the ground, concentrate or otherwise enhance their characteristics or remove impurities, and the extent to which the mineral recovery process imparts its chemical characteristics to the waste. Under this test, the greater the extent to which the

waste results from the mineral recovery process itself, and the more the process imparts to the waste its chemical characteristics, the more likely the waste is "uniquely associated."

The Agency believes that this approach provides a reasonable basis to determine whether a waste is "uniquely associated." The Agency believes that these factors touch on the full range of facts that are likely to be relevant in any particular case. As is evident from the criteria summarized above, judgment must be exercised where the question is whether a waste from a non-ancillary operation is uniquely associated. EPA believes that this is appropriate because of the fact-specific nature of this determination and the myriad circumstances that can arise. However, as noted above, the Agency believes that wastes generated from ancillary operations (such as truck maintenance shops at a mine and not from the mining or mineral recovery process itself), are not uniquely associated. Such circumstances would likely present the most readily identifiable cases of non-uniquely associated wastes.

The approach noted above reflects the longstanding principle, based on the clear language in Section 3001 of RCRA, that uniquely associated wastes must result from mining and mineral processes themselves. This approach also is generally consistent with industry's underlying contention that the uniquely associated concept should exempt wastes that are "indigenous" to mining. EPA disagrees, however, with industry's contention that uniquely associated wastes are any wastes that are unavoidably generated by mining operations. For example, arguably, it is unavoidably necessary to conduct maintenance on machinery that supports mining at a site (e.g., used to transport ores and minerals among processes); however, such maintenance is not necessarily part of the mining or mineral recovery process itself. EPA believes that the proper focus should be the extent to which a waste is generated as part of the mining and mineral recovery process, not the extent to which a facility must conduct an activity as part of its operation.

The elements of the "contact" options discussed in the preamble to the proposal, as well as regulatory language contained in the May 1997 proposed rule (see proposed 40 CFR 261.4(b)(7) (stating that exempt extraction and beneficiation wastes must "originate from the extracted ore or mineral")) may affect uniquely associated determinations. While, as discussed above, the Agency believes that sole reliance on a contact principle would be unjustifiably rigid, consideration of the extent to which the mineral recovery imparts to the waste its chemical characteristics provides a useful means of evaluating whether a waste is uniquely associated. The greater the extent to which the waste acquires its chemical characteristics from the process from the processing of an ore or mineral, the more likely that waste would be uniquely associated with the Bevill process. Conversely, the less a particular waste originated from or acquired its characteristics from such processes, the less likely it is uniquely associated.

Some commenters asserted that the Agency's proposal represented a sharp departure from past Agency practice under the uniquely associated principle and would constitute, in effect, a revision of prior Bevill regulatory determinations. Neither contention is correct. While the Agency has articulated here its approach to the uniquely associated principle in more detail than previously, the Agency believes that the approach is fundamentally the same as how the Agency has applied the uniquely associated principle in the past. Second, the Agency is not, through the uniquely associated principle, seeking to revise past regulatory determinations that exempted extraction and beneficiation wastes and certain mineral processing wastes from Subtitle C regulation. The list of exempt extraction/beneficiation processes and mineral processing wastes in section 261.4(b)(7) is not altered by this approach. Even under these existing regulatory provisions, it was necessary to determine in certain cases whether a particular waste stream was, in fact, "from" (i.e., "uniquely associated" with) one of the enumerated Bevill processes. EPA's past regulatory determinations did not, therefore, obviate the need for determining the applicability of Bevill to particular waste streams. In this rule, EPA is simply ensuring that the uniquely associated criteria have the benefit of full public notice and comment; we have not, however, altered the scope of prior regulatory determinations through this process.

Industry commenters nonetheless had concerns about certain applications of the uniquely associated principle articulated in the mineral processing identification document contained in the docket at proposal. In particular, commenters expressed concerns that the document concluded that spent kerosene in copper solvent extraction, crud from electrowinning, crucibles and cupels, and acid cleaning solutions from gold heap leaches are not uniquely associated. All of the wastes just noted are generated as a result of beneficiation. It should be noted that all wastes generated after the commencement of mineral processing are mineral processing wastes. As a result of the Agency's 1989 rule (54 FR 2322), all mineral processing wastes, except those noted in 40 CFR 261.4(b)(7), are subject to RCRA Subtitle C, if they exhibit a hazardous characteristic. Therefore, the effect of the uniquely associated principle is of less import than at beneficiation facilities.

The Agency received numerous comments challenging the Agency's position that these wastes were not uniquely associated. Comments from the copper industry noted that slimes/muds, crud, and spent kerosene generated from copper solvent extraction and electrowinning were uniquely associated because these wastes had been determined by the Agency in 1989 (see 54 FR 36592) to be wastes from extraction and beneficiation. Based on these comments, the Agency has reassessed its prior conclusions regarding these wastes and agrees with the copper industry that slimes/muds, crud, and spent kerosene generated from copper solvent extraction and electrowinning are uniquely associated. 40 CFR 261.4 states that wastes from solvent extraction and electrowinning are extraction/beneficiation wastes and are not subject to regulation under Subtitle C. Applying the approach described above, it is clear that solvent extraction and electrowinning are clearly not ancillary activities since their sole purpose is to concentrate copper values out of pregnant leach solution. The "uniquely associated" nature of these wastes is also supported by the degree to which the wastes originate and derive from the mineral recovery process. Thus, the Agency's view is that these wastes are "uniquely associated" with beneficiation.

Comments received from the gold industry noted that acid wash solutions are generated solely from processes used to concentrate gold values from cyanide leach solutions. Again, the Agency has reassessed its earlier interpretation and now believes that acid wash solutions from gold heap leaching are uniquely associated. The Agency came to this conclusion in light of the non-ancillary nature of the process generating these wastes (carbon columns must be kept "clean" for the gold to be effectively recovered), the extent to which the wastes originate and derive from this mineral recovery process, as well as the fact that the process imparts some

chemical characteristics to the waste (i.e., the ore material that is cleaned from the carbon).

Based on the approach articulated above, the Agency now believes that other wastes are best viewed as non-uniquely associated. For example, the Agency believes that lead anodes used in the electrowinning process are not non-uniquely associated wastes. While lead anodes are used in the mineral recovery process and thus could be viewed as uniquely associated based on this consideration in isolation, a countervailing consideration is that the mineral recovery process imparts virtually no characteristics to these materials. Lead anodes are virtually identical both before and after being used in the process. On balance, the Agency concludes that lead anodes are not uniquely associated with mining and mineral processing.

The Agency also reassessed the status of cupels and crucibles and finds that they remain non-uniquely associated wastes. These wastes are the result of laboratory testing. Cupels and crucibles are also used in other industries (e.g., jewelry companies test the precious metal content of metals using cupels). These wastes are from an ancillary operation, laboratory analyses, and are not generated due to the direct recovery of gold and, therefore, fail to meet the Agency's uniquely associated criteria. It should also be noted that the Agency has consistently found that laboratory wastes are generally non-uniquely associated.

As stated previously, the applications of the "uniquely associated" principle articulated here reflect the Agency's interpretation of the criteria as applied to those particular wastes based on the best current information available to EPA. Like the positions articulated in the Identification Document, these calls represent the Agency's current best evaluation of whether these wastes are "uniquely associated," based on available information. However, the discussion above and in the Identification Document simply provides guidance on these issues, and therefore, the determinations are not legally binding on decisionmakers, the public, or the courts.

Finally, one commenter argued that the uniquely associated principle as discussed by EPA is an impermissible reading of the Act to the extent it would authorize EPA to consider factors other than high volume/low toxicity in making Bevill determinations. The Agency disagrees with this position. The Court in *EDF II* directed the Agency to apply a high volume/low toxicity criteria to determine if a mineral processing waste would retain the Bevill exclusion. The uniquely associated inquiry is somewhat different. The question here is the threshold issue whether a particular waste is "from" extraction, beneficiation or mineral processing in the first place. The Agency does not believe that the decision in *EDF II* spoke to that inquiry. Rather, *EDF II* was concerned solely with the circumstances under which a waste that is "from" these processes qualifies for the Bevill exclusion. Stated another way, a waste is only subject to the Bevill exclusion if it is, in fact, "uniquely associated" with extraction/beneficiation or one of the 20 exempt mineral processing wastes. Thus, the uniquely associated principle does not expand the scope of the Bevill exemption, and the Agency's approach is, therefore, entirely consistent with the decision in *EDF II*.

b. Addition of Mineral Processing Secondary Materials to Units Processing Bevill Raw Materials. The question addressed in this section is: if a Bevill extraction/beneficiation process uses as feedstock a mineral processing secondary material which otherwise would be a hazardous waste, would the resulting wastes still be considered to be from extraction/beneficiation and hence Bevill exempt?

There are two bases for potential environmental concern prompting this question. The narrower issue is that if otherwise-hazardous wastes are used as partial feedstocks, could they change the resulting wastes' character in a manner such that the existing exclusion should no longer apply, or, put another way, is the Bevill exemption being used to shield disposal of non-exempt hazardous wastes? The broader issue is whether the Bevill amendment, which creates an exemption from rules designed to protect the public and the environment from unsafe hazardous waste disposal practices, should be interpreted any more broadly than necessary given that the effect is to exempt more waste from protective controls.

EPA proposed two different answers to these questions. In the January 1996 proposal, the Agency proposed to apply the same "significantly affected" test used in the partially analogous context of a Bevill device which co-processes hazardous waste along with normal raw material feedstock. 61 FR at 2351 and 40 CFR section 266.112. So long as resulting wastes from the extraction/beneficiation process were not "significantly affected" by the addition of hazardous secondary materials, resulting wastes would remain exempt. Id. Significantly affected meant either that the resulting wastes reflecting co-processing were statistically different over the non-waste baseline, or that there was an environmentally significant increase in hazardous constituents over the non-waste baseline. Id.

The May 1997 proposal would have gone further and interpreted the Bevill amendment narrowly (a common rule of construction when construing exceptions to plenary protective regulatory schemes to apply only to situations when extraction/beneficiation raw material feedstocks are utilized) to apply only to situations when extraction/beneficiation raw material feedstocks are utilized (see 62 FR at 26052).

After reviewing the public comments, the Agency has decided not to adopt either of these alternatives. As explained below, EPA ultimately has decided that the likely result of either proposal would be unwarranted disruption to legitimate (and desirable) recovery practices within the industry. Nonetheless, as discussed in the final subsection of this part of the preamble, the Agency retains concerns that the Bevill amendment not be used as a means of shielding disposal of non-Bevill hazardous wastes, and therefore cautions that the Agency intends to scrutinize especially carefully claims of legitimate recycling when hazardous secondary materials are co-processed in extraction/beneficiation operations.

(i) Should the Bevill amendment apply only when virgin materials are processed in extraction/beneficiation operations? In the Agency's May 1997 proposal, EPA sought comment on whether a narrow reading of the Bevill exclusion should be implemented which would limit the availability of the Bevill exemption to wastes generated exclusively from the use of Bevill raw materials, namely ores and minerals. Under this approach only virgin ores used as a feedstock to a beneficiation operation and only concentrates derived from beneficiation and then used as a feedstock to mineral processing would be eligible for the Bevill exclusion. If any alternative materials were used as feedstocks, the resulting waste would not be eligible for the Bevill exclusion. 62 FR at 26052.

In today's rule, the Agency is declining to pursue this option. Industry comments were uniformly opposed. Industry noted that since 1989, the Agency has established a clear use of the 50 percent rule and was well aware that the co-processing of a range of materials was occurring at both extraction/beneficiation and mineral processing facilities when it finalized its

1989 rulemaking (see 54 FR 33620, September 1, 1989). Industry further pointed out that in the 1989 rulemaking the Agency found that 20 mineral processing wastes (see 40 CFR 261.4(b)(7)) would retain their Bevill exempt status even though co-processing was occurring. Industry also noted that the Agency had not presented any data to confirm that the co-processing of virgin and non-virgin materials would actually increase risks to the environment. Public interest groups on the other hand indicated that the proposed option more closely follows the intent of Congress to limit the Bevill exemption to high volume, low toxicity wastes.

The Agency has reviewed the data on co-processing of non-virgin and virgin material and finds that it did evaluate co-processing issues in its 1990 Report to Congress on Wastes from Mineral Processing (EPA Office of Solid Waste, July 31, 1990). This review, as it relates to the 20 mineral processing waste streams that are still exempt, found that co-processing had not significantly changed the hazardous properties of the resultant wastes.

The Agency noted in its proposal that it was unaware of the extent of co-processing at extraction/beneficiation facilities, particularly after 1985. Industry comments noted that background reports to the Agency's 1985 "Report to Congress on Extraction and Beneficiation Wastes" (EPA Office of Solid Waste, December 31, 1985) discussed this co-processing issue. Agency review of these documents indicates that while some references to feedstocks are discussed, the Agency was not aware of the extent of this practice until it began to restudy mining and mineral waste management practices in 1989 and initiated a series of visits to mines and mineral processing facilities in 1991–92.

Industry also submitted comments indicating that implementing this option would have significant adverse impacts on the mining and mineral processing industries. The Agency assessed industry comments and conducted its own economic analysis. The Agency found that implementation of this option may reduce current recycling in the copper and lead sectors, and could cause potentially serious economic disruption to industry. (See EPA's Regulatory Risk Impact Analyses.) Both the gold and copper sectors pointed out that they routinely reintroduce mineral-bearing streams from their processing activities into their beneficiation plants to further recover metal values. Such practices would diminish if this option were implemented, since affected extraction/beneficiation operations would not recycle secondary materials if the result is to lose Bevill status of the resulting wastes. It makes little sense for the Agency to implement a program which may reduce recycling where its knowledge of the environmental benefit of the approach is limited.

(ii) Significantly Affected. Under the Agency's January 1996 proposal, mineral processing secondary materials could be introduced into beneficiation units generating Bevill-exempt wastes (without affecting the wastes' Bevill status) if they were legitimately recycled, secondary materials comprised less than 50% of the total feed to the unit, and the resulting wastes were not "significantly affected" by the recycling practice.

EPA has decided to adopt the proposed approach except the Agency has decided not to adopt the proposed "significantly affected" test in today's final rule. It should be pointed out that small volumes of mineral processing secondary materials likely to be recycled at beneficiation facilities would be processed along with enormous quantities of raw ore. Therefore, the probability that the introduction of such materials would affect the characteristic of the resultant wastes is very low.

Given the likelihood of minimal environmental effect, the Agency must therefore judge whether the benefits of encouraging recycling these materials outweigh the potential additive risks that, however unlikely, could potentially occur in unusual cases. The Agency has decided that, from both an implementation and an overall environmental perspective, not requiring a "significantly affected" evaluation makes sense. While it is possible that adoption of a "significantly affected" test might catch the unusual circumstance where addition of secondary materials substantially changes the characteristics of the resultant wastes, imposing such a requirement could potentially have a chilling effect on the amount of secondary material that the industry recycles. This is because industry would not risk imperilling Bevill status, since a consequence could be RCRA permitting and facility-wide corrective action potentially affecting areas of historic contamination. From an environmental perspective, EPA believes that the benefits of recycling such materials are substantial, and far outweigh the largely marginal benefits that could be associated with requiring a "significantly affected" analysis on a waste stream by waste stream basis.

EPA originally viewed the situation presented here as analogous to when hazardous wastes are co-processed in Bevill units, and so proposed the identical test for resulting residues. 61 FR at 2351. On reflection, there are important distinctions between the two fact patterns. EPA applies the "significantly affected" tests when what are admittedly hazardous wastes are co-processed. The usual case is when a hazardous waste fuel is burned in a Bevill unit (like a cement kiln) which also processes normal raw materials. The hazardous wastes can contribute more and different hazardous constituents not normally found in the raw materials. In the extraction/beneficiation example, however, the mineral processing secondary materials are being used as feedstock precisely because those materials share attributes found in raw materials (i.e., recoverable amounts of metals). Because the rule limits co-processing to mineral processing secondary materials, such materials would typically be similar in nature to the raw materials being processed, making it far less likely that co-processing would significantly alter the attributes of resulting wastes. In addition, unlike the burning in furnaces example noted above, the mineral processing secondary materials being recycled are not hazardous wastes. Although they are secondary materials, the Agency has decided to exclude them from the regulatory definition of solid waste (assuming legitimate recycling) because the activity resembles normal reclamation practices within the industry. Put another way, since the mineral processing secondary materials are from the same industry sector and are being reclaimed within the same industry, they can be viewed as secondary materials which are not wastes. It is, thus, less appropriate to apply a significantly affected test to these non-waste feedstocks.

EPA also was unable to apply the "significantly affected" test in a manner that would focus on those secondary materials that actually could cause significantly increased environmental risks. The proposed test was the Burning in Furnaces (BIF) 2-part test, which would function in a different manner in this rule. Under the BIF rule, the concern was with the use of hazardous wastes from outside industries, and residuals rarely fail the second part of the test, exceeding the hazardous characteristic. Here, we are dealing with materials from within the industry, metal values are reclaimed, and wastes typically exhibit a hazardous characteristic. Since mineral processing

secondary materials often contain other metals in them, the resultant wastes from co-processing may show statistical increases or decreases in the metals content of the resultant wastes. The increases or decreases in metal constituents, however, does not necessarily mean that risk has increased. An increase in one constituent may be offset by a decrease in another constituent or by additional volumes of raw material feedstocks that would be needed to replace the mineral processing secondary materials. The application of the proposed test therefore could not be effectively used to determine if risks would increase if secondary materials are co-processed at beneficiation facilities.

(iii) Conclusion. For these reasons, the Agency has decided to retain as a condition for retaining Bevill status the standard requirement that an extraction/beneficiation unit processes at least 50 percent raw material. 54 FR at 33620 (Sept. 1, 1989); 50 FR at 49190 (Nov. 25, 1985); and 56 FR at 7198 (Feb. 21, 1991) (previous instances where EPA has used this test); 61 FR at 2351 (proposal of that test here). If the 50 percent criterion is met, the resulting waste would still be from extraction/beneficiation and hence exempt. Raw materials can be mineral processing secondary materials and be placed into units generating Bevill-exempt wastes provided that the facility legitimately recycles these materials.

The proviso is important. EPA repeats that the Bevill amendment is not to serve as a means of disposing of non-Bevill hazardous wastes. As explained later in the preamble, if a hazardous waste is mixed with a Bevill waste, the mixing is regulated under RCRA Subtitle C, and the mixed wastes may be Subtitle C hazardous wastes. While the mixture rule does not apply when materials are placed in a beneficiation unit for legitimate recycling, it would apply if a hazardous secondary material is not being recycled legitimately. See *U.S.* v. *Self*, 2 F.3d at 1071, 1079 (10th Cir. 1993)(sham recycling is simply hazardous waste disposal or treatment).

It should also be pointed out that today's rule prohibits the storage on the ground of any characteristically hazardous mineral processing secondary material. Should a beneficiation facility wish to legitimately reclaim such materials, it should be aware that placement of these materials in raw material piles may change the RCRA status of the pile.

c. Bevill Mixture Rule and Disposal. Disposal of waste mixtures is the focus of this section. The Agency promulgated the Bevill mixture rule in 1989 (see 54 FR 36592). That rule was remanded to the Agency in *Solite Corp* v. *EPA*, 952 F.2d 473, 493–94 (D.C. Cir. 1991). EPA reinstated the mixture rule in 1992; however, this reinstatement was found to be procedurally defective in *Mobil Oil* v. *EPA*, 35 F. 3d 579 (D.C. Cir. 1994).

In the January 1996 proposal, the Agency proposed that if any mineral processing hazardous waste, or indeed any hazardous waste, is mixed with and disposed with a Bevill waste, the resulting waste is, under certain circumstances, regulated under RCRA Subtitle C. The Agency further stated that the mixture of Bevill wastes and hazardous wastes would normally be regulated as a form of treatment subject to regulation under Subtitle C. The Agency stated its concern about the potential human health and environmental risks due to increased hazardous constituents resulting from the disposal of mixtures of hazardous waste with Bevill-exempt wastes. The Agency based the proposal on the policy that Bevill wastes not be allowed to serve as an unregulated dumping ground for hazardous wastes. Cf. *Horsehead Resource Development Co.* v. *Browner*, 16 F. 3d at 1258.

The rule being adopted today is a reinstatement of the mixture rule promulgated in 1989. The Agency continues to believe that the approach adopted in 1989 is sound, and properly balances the objectives of the Bevill amendment with those of RCRA as a whole. While commenters criticized EPA on the grounds that the prior mixture rule has twice been struck down by the courts, those decisions did not address the merits of the Bevill mixture rule.

One clarification of statements in the 1996 proposal is in order. The Agency stated that the proposed rule differed from the 1989 Bevill mixture rule in that the earlier rule had exempted mixtures of Bevill wastes and characteristic hazardous wastes from requirements pertaining to treatment. *See* 61 Fed. Reg. 2352. This statement was, however, in error. The Agency stated in the 1989 rulemaking that such mixing would, in fact, constitute treatment of a hazardous waste, and would be subject to the appropriate regulation for treatment storage and disposal of hazardous wastes, including obtaining a permit. 54 Fed. Reg. 36622. Thus, the Agency is not taking a more stringent approach to regulating mixtures than was taken in 1989. As in 1989, moreover, the Agency is not amending in any way the definition of treatment, storage, or disposal of hazardous wastes; nor is the Agency promulgating any specific provisions related to how those definitions apply to mineral processing wastes. The Agency is simply stating that mixtures of Bevill and non-Bevill wastes can, depending upon the particular facts, constitute treatment, storage or disposal under the existing regulatory program.

Industry commenters generally opposed the proposed mixture rule. Several commenters argued that the proposed rule was contrary to the Act because it undermined the protection that the Bevill amendment was intended to provide the industry. These commenters argued that the legislative history indicates Congress intended the Bevill amendment to be read broadly, to incorporate waste products generated in the "real world," and that Congress recognized co-management of wastes practiced by the industry occurred in the "real world." According to these commenters, integrated facilities conducting extraction, beneficiation and processing operations at a single location have historically co-managed wastes from these operations, including certain newly identified mineral processing wastes, and the proposed rule would effectively undermine the protections of the Bevill amendment for these operations. One commenter contended that the mixture rule would subject "high volume/low hazard" waste mixtures from the mining and mineral processing industry to Subtitle C regulation without having conducted the special study and regulatory determination process set forth in section 3001 of RCRA. Since such mixtures of wastes are "high volume/low hazard," these commenters argued that section 3001, as construed by the Court in *EDF v. EPA*, 852 F.2d 1316 (D.C. Cir. 1988), mandates exclusion of those wastes from regulation under Subtitle C.

After careful consideration of these comments, EPA has concluded that they misconstrue the scope of the Bevill amendment, and that the proposed approach to Bevill mixtures is a reasonable one. First, the Agency disagrees with these commenters' interpretation of the Bevill amendment as applying to not only to "special wastes" themselves, but also to any other hazardous waste that may be co-managed with them. Congress simply provided that "solid waste from extraction, beneficiation and processing of ores and minerals" are not subject to Subtitle C. RCRA § 3001(b)(3)(A). Congress did not, as these commenters suggested, apply this exclusion to such wastes "and other hazardous wastes that may be co-managed" with them. Rather, Congress endorsed EPA's conclusion that high volume/low toxicity "special wastes" deserved special treatment

under the Act by virtue of the difficulties that would be associated with managing these wastes under the Subtitle C program. Moreover, EPA's decade-long effort to demarcate the line between special wastes and non-excluded wastes was premised on the notion that the line between them is of some significance. If any hazardous waste can come within the scope of the Bevill amendment simply by being mixed with Bevill waste, that line becomes blurred, potentially creating a universe of excluded wastes far beyond that envisioned by Congress when it enacted the Bevill amendment.

The Court in *EDF II* indicated that those mineral processing wastes which did not meet the high volume/low toxicity criteria should be fully subject to Subtitle C. The Agency, in today's rule, has taken prudent steps to encourage the legitimate recycling of hazardous secondary materials. If hazardous mineral processing wastes can not be recycled and must be disposed, the Agency finds nothing in *EDF II* which precludes the Agency from treating these hazardous wastes like any other hazardous wastes. It should also be pointed out that today's rule does not affect the disposal of extraction/beneficiation wastes as long as there is no mixing of non-exempt hazardous wastes with them. EPA believes that this rule is consistent with the scope of the Bevill amendment because it maintains the Bevill exclusion for mixtures that are hazardous due solely to any hazardous constituents of the Bevill waste. The fact that these resulting wastes retain their Bevill status does not mean, however, that the act of storing, treating, or disposing of hazardous wastes with Bevill wastes should be exempted from normal Subtitle C controls.

EPA also disagrees with the notion advanced by some commenters that EPA is required by section 3001 to conduct a study to determine whether mixtures of Bevill and other wastes meet the high volume/low toxicity test and thereby merit being covered by the Bevill amendment. EPA reads section 3001 as mandating that EPA study wastes generated by the mining and mineral processing industry for purposes of determining whether particular waste streams are subject to the Bevill amendment. EPA has done so and determined that mineral processing wastes that do not meet the high volume/low toxicity threshold are not subject to Bevill. EPA's orderly decision-making (see 54 FR 36592 and 55 FR 2322), would be undermined if the Agency were then required to revisit these determinations based upon how facilities happen to manage their wastes.

Stated another way, EPA reasonably based its Bevill regulatory determinations on the volumes of each type of mineral processing waste *generated* within the industry; the Agency does not believe it is reasonable to interpret section 3001 as mandating that EPA disregard the volumes in which wastes are generated and instead base its determinations on the vagaries of how those waste streams may be aggregated through industry's disposal practices. Such a result would be counter to EPA's special waste concept, and ignore the fact that mineral processing wastes streams that are not generated above Bevill's high volume/low toxicity threshold would, in fact, be amenable to management under Subtitle C. Thus, the commenter's interpretation would effectively allow the mining and mineral processing industry to "bootstrap" smaller volume wastes into Bevill simply by co-disposing them with Bevill wastes. The Agency and the courts have never interpreted Bevill in such an awkward fashion, and the Agency declines to follow such an approach here.

The Agency does not agree with comments that any change to the Bevill mixture rule would effectively eliminate Bevill for integrated facilities. Today's rule does not change the Bevill status of extraction/beneficiation wastes nor does it alter the Bevill status of 20 mineral processing wastes (see 40 CFR 261.4). Since a large number of "newly identified" mineral processing waste streams become subject to the LDR, the Agency took steps to clarify the status of non-exempt "Bevill" wastes (i.e. mineral processing wastes not within the scope of the Bevill amendment) in this rulemaking. The Identification report, placed in the docket in January 1996, was developed by the Agency to assist companies in determining if wastes were or were not exempt. The Agency sought comment on the draft Identification document and has finalized this report. This report is, however, guidance. Mineral processing companies now have the ability to identify the status of each waste stream and to cease mixing non-exempt hazardous wastes with exempt waste streams.

Regarding commenters' critique of the concerns expressed by EPA in the proposal justifying the proposed mixture rule, the Agency continues to be concerned about the mixture of hazardous wastes with Bevill exempt wastes for treatment, storage or disposal. The Agency has noted earlier that it is not imposing the significantly affected option because the mixture of hazardous secondary materials with feedstocks does not appear to adversely affect risk. This is so because the mixtures are destined for legitimate recovery of metal, acid, water or cyanide, or other values. Mixtures destined for disposal will not have any of their hazardous constituents removed or other values utilized and may contribute to the waste disposal problem. Nor is there the slightest indication in law that normal Subtitle C rules should not apply to disposal of normal Subtitle C hazardous wastes.

Commenters did point out several errors made by EPA in the proposed rule language. Many commenters noted that there was an inconsistency between the preamble of the January proposal and its proposed regulatory language. The proposed regulatory language inadvertently omitted language in the general mixture rule stating that mixture of a solid waste with a hazardous wasted listed solely because it exhibits a characteristic identified in Part 261 subpart C is a hazardous waste "unless the resultant mixture no longer exhibits any characteristic of hazardous waste. . . " 40 C.F.R. 261.3(a)(2)(iii). It was not EPA's intent to propose deleting this language, and it therefore is included in the final rule.

In addition, as pointed out by commenters, the proposed language failed to track the preamble discussion of mixtures of Bevill wastes and characteristic hazardous wastes (as well as wastes that are listed because they exhibit a hazardous characteristic). Under the proposed rule language, mixtures of Bevill wastes and hazardous wastes would be a hazardous waste whenever it exhibited a hazardous waste characteristic, even where that characteristic was imparted to it solely from the Bevill waste. (See proposed section 261.3(i).) As shown by the preamble, this was clearly not EPA's intent, which was to preserve the Bevill exclusion for mixtures that are hazardous solely because of the Bevill component of the mixture. See 61 FR 2352–53.

Conversely, the preamble, although ambiguous in spots on this issue, did say at one point that mixtures of characteristic hazardous waste and Bevill wastes would be considered hazardous waste only if the mixture continued to be hazardous due to characteristics imparted to it by the non-Bevill waste. 61 FR at 2352. If the mixture exhibited a hazardous characteristic due solely to the Bevill waste, the Agency did not intend to designate the mixture as a hazardous waste.

Consistent with that discussion, under today's rule, the Agency has decided that if Subtitle C hazardous waste exhibiting a characteristic is mixed with Bevill-exempt waste exhibiting the same characteristic and the mixture continues to exhibit that common characteristic, then the entire mixture should be considered to be non-exempt hazardous waste. This result is consistent with normal rules on when wastes are hazardous, which state that if a waste exhibits a hazardous waste characteristic, it remains a hazardous waste unless and until it no longer exhibits a characteristic. 40 CFR 261.3(d)(1). In addition, such a principle will make this rule easier to administer (should this situation actually occur), since enforcement officials will not have to parse out which portion of the waste mixture is imparting the characteristic property. Finally, the result is consistent with the overall object of today's rule: not to let Bevill wastes be used as a means of allowing unregulated management of normal Subtitle C hazardous wastes.

Several commenters noted concern that existing exemptions to the Agency's mixture rule, such as that given to totally enclosed treatment facilities and elementary neutralization units, would be eliminated under this rule. The Agency reiterates that this rule does not alter in any way the current Agency mixture rule. The purpose of this rulemaking is to place the mixing of hazardous wastes that may occur at mineral processing plants on the same status as all other hazardous waste management.

(i) Illustrations of how today's rule operates. Although the regulatory parlance for today's rule has always been the "Bevill mixture rule", the greatest practical consequence of the rule is probably on the units where mixing occurs. This is because units (i.e. tanks, impoundments, piles, landfills, etc.) where hazardous wastes are placed will (absent some exemption or exclusion other than that provided by the Bevill amendment) be regulated units, i.e. units subject to Subtitle C standards for treatment, storage, and/or disposal. This point is illustrated by the following examples, which also illustrate the effect of the rule on the resulting mixtures:

Example 1. Facility A generates F 001 listed spent solvents which it mixes with a solid waste that has Bevill exempt-status. The mixing occurs in a landfill.

The landfill is a regulated unit because hazardous waste—F 001—is being disposed in it. (Among other things, this means that the F 001 wastes could not be placed in the landfill until the LDR treatment standard is satisfied.) In addition, all of the wastes with which the F 001 wastes are mixed are hazardous wastes carrying the F 001 waste code by application of the mixture rule.

Example 1a. Same facts as in example 1, except that the waste being mixed is F 003 spent solvent, a waste listed only because it exhibits a characteristic of hazardous waste.

The landfill becomes a regulated unit for the same reason as in example 1. (See *Chemical Waste Management v. EPA*, 976 F.2d at 20 n.4 and 24 n. 10 (placement of waste which is hazardous for any amount of time in a unit subject that unit to Subtitle C regulation); 61 FR at 2352 (same). However, the status of the resulting waste mixture is determined by the principles for characteristic hazardous wastes, illustrated below.

Example 2. Facility B generates a characteristic ignitable solvent which it adds to a surface impoundment containing a Bevill-exempt waste that would exhibit the TC for lead. The resulting mixture exhibits TC for lead but is no longer ignitable.

The surface impoundment is a regulated unit, since it is engaged in treatment (elimination of the ignitability characteristic) and disposal (the placement of the ignitable waste). The remaining wastes in the unit retain their Bevill-exempt status because they do not exhibit the characteristic property of the non-Bevill hazardous waste. Thus, if the waste were to be removed from the impoundment and disposed elsewhere, disposal need not occur in a regulated unit.

Example 3. Facility C generates a characteristic hazardous waste exhibiting TC for lead which it mixes in a tank with Bevill-exempt wastes which also would exhibit the TC for lead. The resulting mixture continues to be TC for lead.

The tank is engaged at least in storage of hazardous waste, and possibly treatment (depending on how the D008 hazardous waste is affected by the mixing). If waste is removed from the tank, it remains subject to Subtitle C because it continues to exhibit the characteristic of the non-exempt hazardous waste.

d. Remining. The Agency clarified in its January 1996 proposal that the removal of historically land placed mineral processing wastes for the purposes of mineral recovery would not constitute disposal for purposes of triggering Subtitle C. Moreover, removal of wastes would not render the historic disposal unit subject to RCRA hazardous waste requirements (see 53 FR at 51444, December 21, 1988). The Agency is today again clarifying that removal of waste from a unit does not constitute disposal for the purposes of triggering Subtitle C regulation.

Commenters noted that the proposed mixture rule would in effect eliminate opportunities for remining. The Agency disagrees. As noted previously, the mixture restrictions in today's rule deals primarily with disposal of mixtures. The mixture rule therefore, will not affect the co-processing of historically disposed mineral processing secondary materials with other feedstocks.

6. Responses to Court Remands

a. Applicability of the Toxicity Characteristic Leaching Procedure (TCLP) to Mineral Processing Wastes. In the January 1996 proposal, the Agency proposed to continue using the TCLP (SW–846 Test Method 1311) as the basis for determining whether mineral processing wastes and manufactured gas plant wastes exhibit the toxicity characteristic (TC) of hazardous wastes, and developed a record supporting this position. When the Agency promulgated the TCLP method for testing whether wastes exhibit the toxicity characteristic, the applicability of the TCLP test to mineral processing wastes was challenged in *Edison Electric Institute* v. *EPA*, 2 F.3d 438 (D.C. Cir. 1993) ("*Edison*"). The Court held that the information in the record at the time was insufficient to show a rational relationship between the TCLP and a likely mismanagement scenario for mineral processing wastes.

Under the Court's holding, the Agency must at least provide some factual support that such a mismanagement scenario is plausible (2 F.3d at 446–47). The Agency is addressing this remand in today's final rule because any applicable land disposal restrictions would have little meaning unless the Agency has a basis for determining whether these mineral processing wastes are hazardous, and, therefore, subject to the restrictions.

Under the Court's ruling in *Edison*, the application of the TCLP test to mineral processing wastes is appropriate if the evidence available to EPA shows that disposal of such wastes in municipal solid waste landfills (MSWLF) is a "plausible" mismanagement scenario (not necessarily requiring that it be typical or common) 2 F.3d at 446. Moreover, it is sufficient if there is "evidence or explanation on the record to justify a conclusion that mineral wastes ever come into contact with any form of acidic leaching medium." *Id.* at 447.

In considering the plausibility of this mismanagement scenario, the Agency has first carefully evaluated those circumstances that industry has argued make such mismanagement implausible. Industry has argued that co-disposal with municipal solid waste is not plausible because the huge volumes in which the wastes are generated could simply not be handled by an MSWLF. EPA has, however, conducted a comprehensive review of such wastes and concluded that many wastestreams are generated at low volumes. (See

Characterization of Mining and Mineral Processing Wastestreams, USEPA, 1998.) Thus, the volumes in which mineral processing wastes are generated do not render disposal in an MSWLF implausible.

Industry comments also indicated that the location of its facilities were remote and not close to municipal landfills. Based on physical location alone, industry suggested that disposal of their wastes in municipal landfills was very unlikely. This contention is not, however, supported by the facts. The Agency evaluated the location of mineral processing facilities and found that a considerable number of them are located east of the Mississippi River and some are located in or near urban areas. (see *Population Studies of Mines and Mineral Processing Sites,* 1998, U.S. EPA.) This report indicates that there is factual information which rebuts the industry's position that the location of mineral processing facilities is routinely so remote so as to make co-disposal with municipal solid waste implausible. Thus, based on the Agency's population study noted above, the Agency concludes that some mineral processing facilities are in fact located in or near urban areas and their location in such urban areas means that it is plausible that their wastes could be disposed of in urban landfills.

Factual information collected by the Agency (made available for public comment) supports the conclusion that mineral processing wastes may plausibly be disposed of with municipal solid wastes. Industry comments contested EPA's factual basis for the landfill disposal cases found in *Applicability of the Toxicity Characteristic Leaching Procedure to Mineral Processing Waste,* U.S. EPA, 1998. Industry commenters contended that the cases presented by the Agency do not reflect current waste management practices (which primarily involve on-site disposal). Industry commenters also argued that the facts of particular cases did not, in fact, support the conclusion that co-disposal had occurred. EPA has reviewed the information and concluded some of these comments had merit, and EPA has deleted from the final document those cases for which there was not sufficient information to be relied upon by the Agency. However, even after a careful sifting of the case studies, there continues to be evidence to support the conclusion that co-disposal of mineral processing wastes with municipal solid waste is plausible. While most mineral processing wastes are generated in large volumes and disposed on-site as industry contends, the Agency has found that some mineral processing wastes are placed in dumpsters, or similar containers, and shipped off-site for commercial disposal.

These cases include, but are not limited to, co-disposal of mineral processing wastes from the refining of alumina, copper, gold, ferrous metals, lead, silver, and zinc. Such wastes have been disposed in MSWLFs in various states throughout the United States. The Agency also found several cases where manufactured gas plant wastes were disposed in MSWLFs. (See *Applicability of the Toxicity Characteristic Leaching Procedure to Mineral Processing Waste,* U.S. EPA, 1998.)

EPA acknowledges that the information obtained by the Agency does not show that the mismanagement scenario is either typical or common, but such a level of proof is not required. *Edison,* 2 F.3d at 446. It is, moreover, not surprising that the practice does not appear to be widespread because, since 1989, disposal of any non-Bevill hazardous mineral processing wastes in a municipal solid waste landfill has been illegal. Nonetheless, since some mineral processing facilities are located near urban areas and generate low volume wastes, and some of these facilities appear to have, in fact, co-disposed of these wastes in this manner, EPA believes it is reasonable to conclude that application of its mismanagement scenario to mineral processing wastes is reasonable; that is, if these wastes were no longer identified as hazardous by means of the TCLP, then the type of improper disposal which occurred in the past could resume.

Industry commenters further contend that an alternative test, the Synthetic Precipitation Leaching Procedure (SPLP), is more appropriate for mineral processing wastes. The National Mining Association (NMA) noted in its comments that the leach solution used in the SPLP test protocol would more accurately reflect the environmental exposure of mineral processing wastes. The SPLP test uses a leach solution which mimics acid rain, while the TCLP uses a leach solution which mimics acids formed in municipal landfills. The TCLP test therefore uses a leach solution which is more acidic that the SPLP test. However, "[n]othing in [RCRA] requires EPA to tailor the TCLP to the conditions to which mineral wastes are typically exposed." *Edison,* 2 F.3d at 443. If that were the case, it would not have been appropriate for EPA to even have adopted a generic mismanagement scenario as the basis for establishing its approach for testing for the hazardous characteristic. This approach has, however, been upheld as a reasonable exercise of the Agency's discretion. *Id.*

Industry commenters supplied data indicating that the TCLP is more aggressive than the SPLP for most metals and especially lead. Certain states supported use of the test under all or limited circumstances. EPA received very limited data comparing the leach tests. Because these data were extremely limited, the Agency still does not have data broadly comparing TCLP results to SPLP results for a range of mineral processing waste streams. Industry-supplied data appear to indicate that the SPLP test generates results which show lower levels of lead than comparable results using the TCLP. Thus, due to the limited amount of data, the Agency is unable to determine if the SPLP would routinely show lower levels of lead, or how the two tests compare when analyzing other metals or whether such lower levels would, in fact, better reflect actual field conditions than would the TCLP. At bottom, the fundamental issue is not whether one test is more conservative than the other. Rather, the issue is whether it is plausible that mineral processing wastes may be disposed of in environments reflected by the conditions mimicked in the TCLP.

Aside from the plausibility of the Agency's mismanagement scenario, application of the TCLP to mineral processing wastes is supported by comments from industry submitted during the rulemaking regarding disposal practices that are taking place or advantageous at integrated mineral processing/beneficiation facilities in the industry. The proposed (and now final) rule regarding mixtures of Bevill wastes with non-Bevill hazardous wastes (including mineral processing hazardous wastes) effectively prohibits such mixing. Some commenters opposed the proposed mixture rule on the grounds that integrated facilities typically co-dispose of hazardous mineral processing wastes (including those exhibiting the TC) with extraction and beneficiation wastes, and desired to continue this practice or to have mixing available as a management option for these mineral processing hazardous wastes. It is well-documented that extraction and beneficiation wastes can often generate highly acidic environments. (See Acid Rock Drainage Prediction, U.S. EPA, 1994) Disposal of mineral processing wastes with such wastes means that the mineral processing wastes would be subject to acidic conditions that, in some cases, may be comparable to the acidic leacheate medium utilized in the TCLP (if not somewhat more aggressive). This

is because water contacting the acidic waste would thereupon become acidic itself (an example being acid mine drainage). EPA's concern is that if the mineral processing wastes are no longer identified as hazardous because a test other than the TCLP is used, then these wastes could be disposed with the acidic extraction/beneficiation wastes and be exposed to metal-mobilizing acidic leaching conditions as water percolates through the mixture. Given the evident economies noted in the public comments in disposing of mineral processing wastes along with extraction/beneficiation wastes, such a scenario is at least plausible. Such a disposal scenario, which industry states is not only plausible, but is typical of some facilities, provides an additional justification for the application of the acidic leachate approach reflected in the TCLP.

EPA recognizes that the TCLP utilizes organic acids, while the disposal scenario discussed above would involve exposure to mineral acids. In part because of this difference, EPA utilized the SPLP in screening low hazard wastes as part of its 1989 Bevill determination. See 54 FR 36592 (Sept 1, 1989). Commenters have pointed to this statement as undercutting any application of TCLP to mineral processing wastes.

EPA made clear in 1989, however, that the TCLP was still the appropriate test for determining whether a particular mineral processing waste is a hazardous waste subject to Subtitle C. Morever, EPA believes that the general statement contained in the 1989 preamble arguably swept too broadly in its conclusions. Notwithstanding that statement, standard chemistry texts establish that certain metals are highly soluble in acidic environments, including inorganic acids. Numerous factors can affect the precise solubility of a particular metal, and it is generally not possible to generalize whether organic or inorganic acids would cause more or less of a particular metal compound to solubilize. Based on generally accepted chemistry principles, however, a highly acidic environment, whether organic or mineral in nature, can be aggressive towards certain metals typically found in mineral processing wastes. Given that acidic leaching media can result when mineral processing wastes are co-disposed with extraction/beneficiation wastes, EPA believes that the acidic leachate procedure utilized in the TCLP can be appropriate for characterizing mineral processing wastes.

EPA also notes a further policy justification in its choice of the TCLP. The final rule seeks to encourage properly conducted recycling of mineral processing secondary materials, and the scheme in the final rule (whereby recovery can occur provided facilities do not utilize land-based storage units) can be implemented at reasonable cost. (See the Regulatory Impact Analysis for the final rule, summarized later in this preamble.) However, the Agency is concerned that if integrated facilities have a lower cost option of simply disposing these mineral processing secondary materials with extraction/beneficiation wastes, facilities will choose this alternative. Thus, not only will the mineral processing wastes be potentially exposed to acidic leaching conditions, but properly conducted metal recovery will be foregone. (See RCRA section 1003 (a) (6) noting the statutory goal to encourage properly conducted recycling of hazardous wastes.)

In addition to questioning the choice of a leaching medium, commenters questioned certain other features of the test, notably a particle size feature which mirrors freeze/thaw cycles, and a dilution/attenuation factor which is premised on human receptors potentially living relatively proximate to the disposal site. These issues are addressed in greater detail in responses to comments and technical background documents. However, the Agency has documented in the record that many mineral processing facilities are located in parts of the country where freeze/thaw cycles which reduce particle size occur, and are also located near populations reflecting the degree of dilution and attenuation used in the model. (See *Population Studies of Mines and Mineral Processing Sites*, 1998, U.S. EPA)

Finally, EPA notes that nothing in the recent decision *Columbia Falls Aluminum Co. v. EPA* (no. 96–1234) (April 3, 1998) is contrary to this determination. *Columbia Falls* does not stand for the proposition that EPA must customize a test for particular wastes to reflect individual or even typical disposal circumstances, a proposition expressly rejected in *Edison*, 2 F. 3d at 445. Rather, *Columbia Falls* approvingly cites *Edison* for the proposition that "the TCLP must bear some rational relationship to mineral wastes in order for the Agency to justify the application of the toxicity test to those wastes.'" *Columbia Falls*, slip op. at 18; see also *Huls America Inc.* v. *Browner*, 83 F. 3d 445, 454 (*Edison* involved an instance "where the record was barren of any rational relationship between the methodology used by the EPA to set regulatory levels and the known behavior of the substance to which this methodology was applied"). EPA has rectified the record deficiencies noted in *Edison*, showing how the TCLP "bears a rational relationship to the reality it purports to represent." *Columbia Falls*, slip op. at 18. Today's action is thus consistent with both *Edison* and *Columbia Falls*.

EPA is making the decision to retain the TCLP as the test for identifying mineral processing wastes effective within 90 days, co-extensive with the LDR prohibition effective date. This effective date can be complied with feasibly within 90 days since the TCLP is already the applicable test for mineral processing wastes (since it was remanded, not vacated, by the *Edison* ruling). Thus, the regulated community does not need six months to come into compliance. See RCRA section 3010(b)(1).

b. Remanded Mineral Processing Wastes. In the January 1996 proposal, the Agency proposed to revoke the current hazardous waste listings for five court-remanded smelting wastes. The Agency also proposed not to re-list them as hazardous stating that these wastes would be regulated as hazardous wastes if they exhibit a characteristic of a hazardous waste.

In 1980, the Agency listed as hazardous eight wastes generated by primary metal smelters (45 FR 33066, 33124, 47832–34, (1980)). The Agency listed the wastes pursuant to 40 CFR 261.11(a)(3) because they contained one or more of the hazardous constituents listed in 40 CFR 261, Appendix VIII. The eight wastes are described as follows:

K064—Acid plant blowdown slurry/sludge resulting from the thickening of blowdown slurry from primary copper production.

K065—Surface impoundment solids contained in and dredged from surface impoundments at primary lead smelting facilities.

K066—Sludge from treatment of process wastewater and/or acid plant blowdown from primary zinc production.

K067—Electrolytic anode slimes/sludges from primary zinc production.

K068—Cadmium plant leach residue (from oxide) from primary zinc production.

K088—Spent potliners from primary aluminum reduction.

K090—Emission control dust or sludge from ferrochromium-silicon production.

K091—Emission control dust or sludge from ferrochromium production.

In October of 1980, in response to Congressional enactment of the Bevill Exclusion, the Agency suspended its listing of the eight wastes (46 FR 4614–15, 27473 October, 1980). In 1985, EPA proposed a new rule that would relist

six of the eight wastes (50 FR 40292, 40295, October 2, 1985). (The Agency chose not to propose to re-list two of the original eight waste streams (electrolytic anode slimes/sludges, K067, and cadmium plant leach residue, K068, from primary zinc production) because it found that industry was routinely recycling these secondary materials in an environmentally sound manner.) However, the Agency withdrew its 1985 proposal on October 9, 1986 (51 FR 36233).

In *Environmental Defense Fund v. EPA*, 852 F.2d 1316 (D.C. Cir. 1988) EPA was ordered to make a final decision regarding whether to re-list the six metal smelting wastes that it had proposed to list in 1985, and to reduce the scope of the Bevill exemption as it applies to mineral processing wastes. The Agency complied with this order when it re-listed the six wastes.

The American Mining Congress (AMC) challenged these listings. In *American Mining Congress v. EPA*, 907 F.2d 1179 (D.C. Cir., 1990) the Court upheld the Agency's decision to re-list waste K088, spent potliners from primary aluminum reduction, but found that the Agency's record for the five remaining waste streams did not adequately address certain issues raised in comments during the rulemaking. Since the Court did not vacate the listings, they technically remain in effect.

In today's rule, the Agency is revoking the five remanded waste listings. The Agency has found that several of these wastes are still generated and in some cases land disposed, but there is a lack of information demonstrating threats to human health or the environment that would justify a listing at this time. The Agency believe that some wastes, specifically copper acid plant blowdown (K064) and surface impoundment solids at primary lead smelters (K065), are inherently hazardous due to the presence of arsenic and lead, respectively. These wastes can be effectively regulated under RCRA Subtitle C if they exhibit a hazardous characteristic.

The Agency received no comments opposing the proposed rule. To summarize, the Agency is revoking the listing for, and is not re-listing: copper acid plant blowdown (K064); surface impoundment solids at primary lead smelters (K065); acid plant blowdown from primary zinc production (K066); emission control dust and sludge from ferrochromium-silicon production (K090); and emission control dust or sludge from ferrochromium production (K091). However, as explained previously, should these wastes exhibit a characteristic of a hazardous waste, they will be subject to hazardous waste regulations, including the hazardous waste mixture rule.

c. Lightweight Aggregate Mineral Processing Wastes. In the January 1996 proposal, the Agency proposed that air pollution control dust and sludge from the production of lightweight aggregate be classified as a mineral processing waste that is no longer eligible for the Bevill exemption. Lightweight aggregate air pollution control (APC) dust and sludge were among the many mineral processing wastes made conditionally exempt from RCRA Subtitle C requirements under the 1980 Bevill Amendment to RCRA. In 1990, following more detailed study of the generation rates for this waste, the Agency determined that it did not qualify for the Bevill exemption (55 FR 2322, 2340, January 23, 1990). In 1991, the D.C. Circuit directed the Agency to reconsider, after providing notice and soliciting comments, whether these wastes qualify for the Bevill exemption. (*Solite Corporation v. EPA*, 952 F.2d at 500 (D.C. Cir. 1991)).

In the January 1996 proposal, the Agency stated that the wastes from lightweight aggregate production do not meet the high volume criterion for excluded mineral processing wastes. For purposes of EPA's 1989 and 1990 rules concerning Bevill eligibility for mineral processing wastes, high volume is defined as greater than 45,000 metric tons per year per facility, for a solid waste, or 1,000,000 metric tons per year per facility, for a liquid waste, averaged across all facilities generating a particular waste.

To determine whether APC dust and sludge from lightweight aggregate production satisfied the high volume criterion, the Agency analyzed data from its 1989 National Survey of Solid Wastes from Mineral Processing Facilities (SWMPF Survey) and data from public comments submitted by affected companies. The Agency finds that the lightweight aggregate wastes do not meet the high volume criterion.

None of the methods used resulted in a volume estimate that is greater than 45,000 metric tons per year per facility, the high volume criterion for mineral processing wastes. SWMPF survey data, which includes Confidential Business Information (CBI) from two facilities have been included in a separate analysis. The results, which remain confidential, are not substantially different from the results presented previously.

Solite acknowledged in comments that data do not support a determination that lightweight aggregate air pollution control (APC) dust and sludge is generated in volumes that meet the high volume cutoff. However, Solite requested that the Agency delay making a final determination on the Bevill status of its wastes due to other Agency rulemaking activities dealing with cement kiln dusts, which Solite contends would be addressing similar issues to those posed by lightweight aggregate air pollution control (APC) dust and sludge.

The Agency is aware that both cement kiln and aggregate kilns may both burn hazardous wastes fuels and that the dusts from air pollution control devices are often blended into final products. Under existing regulations, if these dusts resulting from burning listed hazardous waste fuels are blended into products that are used on the land, the product would be subject to RCRA's "derived from" rules which would render the product a hazardous waste. Since both cement and light weight aggregate products are usually placed on the land, the potential impacts on their use could be significant. The Agency noted in its 1993 *Report to Congress on Cement Kiln Dust* (CKD) that it did not have evidence that CKD was materially different when generated from kilns burning hazardous wastes as fuel and those which did not. The Agency does not have similar comparable analysis of light weight aggregate dusts and sludges, and can not at this point in time conclude that there is no difference between dusts and sludges from units burning hazardous waste fuels and those that do not. The Agency wants to encourage the sound recycling of these dusts and requires additional time to assess how to ensure that aggregate and cement kiln dusts are managed to ensure protection of human health and the environment. The Agency is currently developing a regulatory program for the safe management of cement kiln dusts and anticipates issuing a proposed rule in 1998. The Agency further anticipates that it will seek comment on how to best manage both wastes in this proposal and will seek information it needs to make a final determination on the status of lightweight aggregate wastes. The Agency is not finalizing its technical background document, *Lightweight Aggregate Production and Air Pollution Control Wastes* (1995), at this time.

d. Mineral Processing Wastes From the Production of Titanium Tetrachloride. (i) Summary. In 1989, following a study of this waste's circumstances of generation, the Agency determined that titanium tetrachloride waste acid did not qualify for the Bevill exemption because it was a mineral

processing waste, not an extraction/beneficiation waste, and did not meet the high volume/low hazard criteria for determining eligibility for the Bevill exemption. (See 54 FR 36592, September 1, 1989.) One producer of titanium tetrachloride, DuPont, requested a determination that waste from its production process be categorized as beneficiation waste on the ground that, unlike processes used by other manufacturers, their process included a beneficiation step which generated the wastes at issue. However, EPA determined that DuPont's waste acids were mineral processing wastes. DuPont challenged this decision, and the Court remanded EPA's decision for further consideration on the grounds that the Agency's explanation for its decision was unclear. *Solite Corporation v. EPA*, 952 F.2d 473,494–95 (D.C. Cir. 1991).

DuPont submitted comments on the January 1996 proposal that contend its processes do not destroy the structure of the mineral as it is placed into its processes. The Agency does not accept this contention, and, as described below, finds that the waste iron chloride acid is a mineral processing.

There are four sequential steps in DuPont's chloride-ilmenite process, the first two of which occur within the same vessel: (1) chlorine gas reacts with iron from the ilmenite ore to form iron chloride gas; (2) chlorine gas reacts with titanium in the ilmenite ore to form titanium tetrachloride gas; (3) the iron chloride is condensed and separated to form a waste iron chloride acid; and finally (4) the titanium tetrachloride is condensed and processed to form titanium oxide pigment, the saleable product. The issue remanded in *Solite* is whether the iron chloride acid waste, which is produced in gaseous form at step (1) but removed from the vessel as a liquid at step (3), is a mineral processing waste that does not qualify for the Bevill exemption, or is a beneficiation waste covered by the Bevill exclusion under 40 CFR 261.4(b)(7).

(ii) Proposal. In the January 1996 proposal, the Agency proposed that iron chloride waste acid from the production of titanium tetrachloride be classified as a mineral processing waste that is not eligible for the Bevill exemption. In the chloride-ilmenite production of titanium tetrachloride, the Agency found that mineral processing began with the chlorination of the iron in the ilmenite ore and the resulting acid is a waste from mineral processing. Specifically, the Agency found that the acid wastes from this process are not physically or chemically similar to the feedstocks entering the operation, which is indicative that mineral processing has occurred.

(iii) Response to Comments. One commenter agreed with EPA's proposed conclusion that Du Pont's process is properly classified as mineral processing because the reaction of ilmenite ore with chlorine gas forms new chemical compounds, namely titanium tetrachloride and ferric or ferrous chloride. The commenter remarked that such a reaction is a chemical processing step that fundamentally alters the make-up of the feedstock ore. The commenter said that EPA correctly drew the analogy between the mineral processing that occurs in the chloride-ilmenite operation and the mineral processing that occurs in other metallurgical operations.

One commenter noted that no beneficiation occurs in the chloride-ilmenite process at all and that the iron chloride waste stream is not eligible for the Bevill exemption. The commenter said that it too produces a waste iron chloride acid in the production of titanium tetrachloride but its waste acid is neutralized in a waste treatment unit. The commenter provided data showing that its treatment of waste iron chloride acid meets all proposed Land Disposal Restrictions (LDR) treatment standards for underlying hazardous characteristics.

DuPont objected to the Agency's proposed classification. DuPont claims that the removal of iron from the ilmenite ore is more appropriately classified as beneficiation. DuPont remarked that the separation of the iron chloride from the titanium ore grains results in a beneficiated ore, similar in nature to commercially available beneficiated ores that EPA has determined are Bevill exempt. The Agency disagrees with this characterization, and concludes that since the ore is chlorinated, that chlorination step changes the physical and chemical structure of ore. The Agency's rationale for this decision is discussed below.

The Agency reiterates its broad standard for making mineral processing determinations described in 54 Fed. Reg. 36592, 36616, September 1, 1989. Specifically, beneficiation operations typically serve to separate and concentrate the mineral values from waste material, remove impurities, or prepare the ore for further refinement. Beneficiation activities do not, however, change the chemical structure of the ore. Mineral processing operations, in contrast, generally follow beneficiation and serve to change the concentrated mineral value into a more useful chemical form and change the chemical composition of the waste. In contrast to beneficiation operations, processing activities often destroy the physical structure of the incoming ore or mineral feedstock such that the materials leaving the operation do not closely resemble those that entered the operation. Typically, beneficiation wastes are earthen in character, whereas mineral processing wastes are derived from melting or other chemical changes.

Today, the Agency again finds that DuPont's chloride-ilmenite operation is mineral processing. In DuPont's process, chlorine gas is reacted with the iron in the ore in the first step to produce a new and significantly different chemical compound than the feedstock ore, namely liquid waste iron chloride acid. The iron is more than simply removed; the solid iron in the ore undergoes a chemical reaction with the chlorine gas to form a new compound that is highly reactive and non-earthen in character, namely iron chloride gas. This reaction is the beginning of a significant change to the physical and chemical structure of the ore. This change is similar to the reaction of chlorine gas with solid titanium to form titanium tetrachloride gas. The Agency finds that the net result of the reaction of chlorine gas with both iron and titanium, which occur in the same vessel, destroys the physical and chemical nature of the ore.

DuPont contends that the formation of iron chloride gas is simply a process to remove an impurity from the ore. DuPont noted in its comments that activities which remove impurities from ores and minerals are classified as beneficiation and all wastes from beneficiation are exempt from regulation under RCRA Subtitle C (see 40 CFR 261.4). DuPont therefore contends that their processes are in fact beneficiation and should not be classified as mineral processing.

As noted earlier, the Agency clarified the definition of beneficiation and mineral processing in its 1989 rulemaking. That rule clearly indicated that beneficiation serves to remove impurities as long as the resultant materials remained earthen in nature and had not undergone a physical/chemical change. The Agency studied the DuPont process numerous times and met with the company several times to assure that the Agency fully understood DuPont process. The Agency concludes that chlorination of the ore causes a significant physical/chemical change to the ore, and therefore the process is more indicative of mineral processing than beneficiation. Further, in the DuPont case, the removal of impurities is taking place simultaneously with

other reactions generating titanium gases. This reaction alone would classify the process as mineral processing since the ore and titanium gas are clearly physically and chemically dissimilar from that point on in the process. The Agency stated in 1989 that once mineral processing began, all wastes generated after that point would be classified as mineral processing wastes, even those wastes which are similar to those generated in beneficiation.

Thus, all wastes associated with the chloride-ilmenite production of titanium tetrachloride are mineral processing wastes. They are neither high volume nor low toxicity and therefore are not eligible for the Bevill exemption.

VII. LDR Treatment Standards for Soil

This section discusses final regulations establishing land disposal treatment standards specific to contaminated soil. Contaminated soil is subject to the land disposal restrictions, generally, when it contains a listed hazardous waste or when it exhibits a characteristic of hazardous waste. (Throughout this discussion, the specific term "hazardous contaminated soil" refers to soil which contains a listed hazardous waste or exhibits a characteristic of hazardous waste; the more general term "contaminated soil" refers to both hazardous contaminated soil and other soils—such as decharacterized soil—which may be subject to the land disposal restrictions.) Prior to today's rule, contaminated soil subject to LDRs was subject to the same land disposal restriction treatment standards that apply to industrial hazardous waste: soil contaminated by listed hazardous waste was subject to the standards that apply to those listed wastes and soil that exhibited a characteristic of hazardous waste was subject to the same standards that apply to the characteristic waste. Today's final rule establishes a new treatability group—contaminated soils—and establishes land disposal restriction treatment standards specifically tailored to that treatability group. Although EPA believes generators of contaminated soil will typically choose to comply with the new soil treatment standards promulgated today, under today's final rule, they have the option of complying either with the existing treatment standards for industrial hazardous waste (i.e., the universal treatment standards) or the soil treatment standards. This is consistent with the approach the Agency took in promulgating LDR treatment standards for hazardous contaminated debris. 57 FR 37221, August 18, 1992.

EPA first proposed tailored land disposal restriction treatment standards for contaminated soil in September 1993. 59 FR 48122—48131 (September 14, 1993). In the September 1993 proposal, EPA requested comment on three soil treatment standard options. These three options involved various combinations of percent reduction requirements for hazardous constituents (typically ninety percent—90%) and multipliers of the universal treatment standards (typically ten times the UTS—10 x UTS). In response to comment on the September 1993 proposal, EPA deferred a final decision on soil treatment standards to the Agency's broader evaluation of application of RCRA requirements to remediation wastes, the Hazardous Waste Identification Rule for Contaminated Media, or HWIR-Media.

On April 29, 1996, as part of the HWIR-Media proposal, EPA again proposed tailored land disposal restriction treatment standards for contaminated soils. 61 FR at 11804 (April 29, 1996). In the April 29, 1996 proposal, soil-specific treatment standards would have required reduction in concentrations of hazardous constituents by 90% with treatment for any given constituent capped at ten times the universal treatment standard. *Id.* This is commonly referred to as "90% capped at 10 times UTS."

In 1995, 1996 and 1997, EPA proposed new land disposal restriction treatment standards for waste identified as hazardous because of metal content and for mineral processing wastes. 60 FR 43654 (August 22, 1995) for metal wastes; 61 FR 2338 (January 25, 1996) for mineral processing wastes; and, 62 FR 26041 (May 12, 1997) supplemental proposal for both types of waste. In these proposals, soil contaminated with metal or mineral processing waste would have been subject to the new treatment standards for those wastes. This was consistent with the way EPA had historically addressed contaminated soil and, at the time, considered proper given that the proposals to establish soil-specific treatment standards were not yet resolved.

EPA did not reopen the issue of whether LDRs apply to contaminated soil or whether it is appropriate to require that contaminated soil achieve the same LDR treatment standards as the contaminating waste (soil contaminated by listed waste) or the characteristic property (soil that exhibits a characteristic of hazardous waste) in the August 22, 1995, January 25, 1996, or May 12, 1997 proposals. Commenters, nonetheless, strongly opposed application of the new LDR treatment standards for metal and mineral processing wastes to soil contaminated with those materials. At about the same time, EPA decided to go forward with the soil-specific LDR treatment standards proposed in April 1996. Therefore, the Agency is promulgating the land disposal restriction treatment standards tailored to contaminated soils proposed on April 29, 1996 (i.e., 90% capped at 10xUTS) today, with the new LDR treatment standards for metal and mineral processing wastes. The soil-specific treatment standards promulgated today may be applied to any contaminated soil that is restricted from land disposal, including but not limited to soil contaminated by metal and mineral processing wastes.

The land disposal restriction treatment standards for contaminated soil promulgated today differ from the standards proposed on April 29, 1996 in three major ways. First, the Agency proposed that the soil treatment standards would be available only for contaminated soil that was managed under an approved cleanup plan (termed a remediation waste management plan, or RMP). In today's final rule, the Agency is making the soil treatment standards available for all contaminated soil that is restricted from land disposal. Second, the Agency proposed that, for soil contaminated by listed hazardous waste, treatment would be required only for the hazardous constituents that originated from the contaminating listed hazardous waste. When the soil treatment standards are used, today's final rule requires all hazardous contaminated soil, including soil contaminated by listed hazardous waste, to be treated for each underlying hazardous constituent reasonably expected to be present when such constituents are initially found at concentrations greater than ten times the universal treatment standard. Third, in response to comments asserting that the proposed regulations governing the applicability of LDRs to contaminated soils were difficult to understand, the Agency has reformatted these regulations into an easier-to-read table. These changes, as well as other significant issues associated with the soil treatment standards and responses to comments, are discussed below.

Today's promulgation of land disposal restriction treatment standards specific to contaminated soil is largely based on the April 29, 1996 proposal (62 FR at 18804–18818). It also relies on the Agency's first effort to establish soil-specific treatment standards, the LDR Phase II proposal (58 FR 48092, September 14, 1993). Today's action

resolves the portions of the April 29, 1996 and September 14, 1993 proposals that address land disposal restriction treatment standards for contaminated soil. However, other elements of the April 29, 1996 proposal remain open and will be acted on in a future rulemaking. Responses to comments submitted on the soil treatment standards proposals are included in the Soil Treatment Standards Response to Comments Background Document, available in the docket for today's action.

A. Application of Land Disposal Restriction Treatment Standards to Contaminated Soil and Justification for Soil Specific LDRs

Prior to today's rule, soil that contained listed hazardous waste or exhibited a characteristic of hazardous waste were prohibited from land disposal unless they had been treated to meet the treatment standards promulgated for pure industrial hazardous waste. This means the same treatment standards which apply to a pure, industrial hazardous waste were also applied to contaminated soil. 61 FR at 18804 (April 29, 1996) and other sources cited therein. In most cases then, contaminated soils were subject to the treatment standards listed in 40 CFR 268.40, and the associated treatment standards in 40 CFR 268.48(a) table Universal Treatment Standards (UTS).[14]

As EPA has discussed many times, the treatment standards developed for pure, industrial hazardous waste may be unachievable in contaminated soil or may be inappropriate for contaminated soil due to particularities associated with the soil matrix and the remediation context under which most contaminated soil is managed, as discussed below. For that reason, EPA is promulgating today's LDR treatment standards specifically tailored to contaminated soil and to the remedial context.

With respect to the soil matrix, the treatment standards developed for pure hazardous waste (i.e., the universal treatment standards) are generally either technically unachievable or technically or environmentally inappropriate. For metal constituents, the UTS may not be achievable in contaminated soil even using model technologies such as stabilization or high temperature metal recovery. Stabilization technologies are sensitive to soil characteristics such as the presence of oxidizing agents and hydrated salts, the distribution of soil particle size and the concentrations of sulfate and chloride compounds. Various combinations of soil characteristics can impair the effectiveness or rate of reaction in stabilization technologies. For example, insoluble materials, such as materials that will pass through a number 200 mesh sieve, can delay setting and curing during stabilization, or small soil particles can coat larger soil particles weakening bonds between particles and cement or other reagents. High temperature metal recovery technologies may not be appropriate for some contaminated soil given the low concentrations of metals that might be present in the soil. In addition, clay and silt content in some soil matrices may add undesired impurities to the metal concentrates or alloys that are formed during high temperature metal recovery.

Although EPA has data showing that some soils can be treated to the existing universal treatment standards for metals using stabilization [15] and high temperature metals recovery, the Agency continues to believe that tailored soil treatment standards are appropriate for metal contaminated soil to ensure that the wide variety of soils can be effectively treated to meet the treatment standards. In addition, the soil treatment standards will have the added environmental benefit of encouraging greater use of innovative soil treatment technologies such as soil or enhanced soil (acid) washing. See, Proposed BDAT Background Document for Hazardous Soils, August 1993; Technical Resource Document: Solidification/Stabilization and its Application to Waste Materials, EPA/530/R–93/012, June 1993; and, Technology Screening Guide for Treatment of CERCLA Soils and Sludges, EPA 540/2–88/004, September 1988.

For soil contaminated with organic constituents, EPA has noted many times that, notwithstanding the fact that such soils can be treated by combustion to meet the universal treatment standards, it is generally unsuitable or impractical from a technical standpoint to combust large volumes of mildly contaminated soil. See, for example, 55 FR at 8760 and 8761 (March 8, 1990) and 61 FR 18806–18808 (April 29, 1996). In addition, the Agency has documented potential difficulties that may arise from the combustion of soil due to soil/contaminant characteristics that affect incineration performance such as the concentrations of volatile metals, the presence of alkali salts, fine particles of soils such as clays and silts, and the ash fusion point of the contaminating waste. For example, operation of an incinerator at or near the waste ash fusion temperature can cause melting and agglomeration of inorganic salts; the loading of clays and silts in some soils may also result in high loadings of particulate matter in flue gases. Proposed BDAT Background Document for Hazardous Soils, August 1993 and Technology Screening Guide for Treatment of CERCLA Soils and Sludges, EPA 540/2–88/004, September 1988.

With respect to the remedial context, EPA, the states, and the regulated and environmental communities have long recognized that application of the LDR treatment standards developed for pure, industrial hazardous waste to contaminated soil can be counterproductive. See, for example, "Hazardous Waste: Remediation Waste Requirements Can Increase the Time and Cost of Cleanups' U.S. General Accounting Office, GAO/RCED–98–4, October 1997. Application of LDRs developed for pure, industrial hazardous waste to contaminated soil often presents remediation project managers with only two choices: pursue a legal option of capping or treating hazardous contaminated soil in place thereby avoiding a duty to comply with LDRs, or excavate the soil and treat it to the full extent of best demonstrated available technology, usually, for organic constituents, incineration. EPA has found that this situation often creates an incentive to select remedies that minimize application of LDRs (e.g., remedies that involve capping or leaving untreated soil in place) a result obviously not contemplated by Congress in enacting the LDR program.[16] 62 FR at pages 64505–64506 (Dec. 5, 1997) and 61 FR at 18808 (April 29, 1996) and other sources cited therein.

Because of the differences between the remedial context (responding to wastes which have already been released to the environment) and

[14] The exception is when waste contaminating soil is subject to a specified treatment method; in that case, the contaminated soil would also be subject to the specified treatment method.

[15] These soil treatment data have been claimed as confidential business information.

[16] As discussed in the April 29, 1996 proposal, EPA has, in the past, justified the existing treatment standards, in part, because they create an incentive to generate less of the affected waste in the first instance. See, Steel Manufactures Association v. EPA, 27 F.3d 642, 649 (D.C. Cir. 1994). In the remedial context, the waste is already in existence; therefore waste minimization is not an issue. Thus, application of the current LDR treatment standards to remediation waste can have the perverse effect of creating an incentive to avoid "generating" waste by leaving it in the ground. The Agency believes that the goals of remediation are better served by more aggresive remedial approaches, such as excavation and management (including some degree of treatment) of remediation wastes, that generally result in more permanent remedies. Such approaches should, therefore, be encouraged.

regulation of wastes generated by ongoing industrial process (preventing wastes from being released into the environment in the first instance), EPA has rejected the conclusion that treatment standards for soil must be based upon the performance of the "best" demonstrated available treatment technology in the way the Agency has historically interpreted these terms. Instead, the Agency has chosen to develop soil treatment standards that can be achieved using a variety of treatment technologies which achieve substantial reductions in concentration or mobility of hazardous constituents and, because they are generally used to treat contaminated soils in remedial settings, do not present site managers with the type of dilemma described above. As EPA has long maintained, the strong policy considerations that argue for using the traditional BDAT analysis as the basis for LDR treatment standards for hazardous wastes generated by ongoing industrial operations do not apply when evaluating BDAT in the remedial context. In the remedial context, for example, waste minimization is not an issue and the additional increment of treatment necessary to achieve traditional BDAT may yield little if any environmental benefit over other treatment options that adequately protect human health and the environment. 54 FR 41568 (October 19, 1989). Indeed there is a legitimate question as to whether a technology whose use results in foregoing other substantial environmental benefits (such as more aggressive, permanent remedies) can be considered a "best" technology. *Portland Cement Association* v. *Ruckelshaus*, 486 F. 2d 375, 385–86 at n. 42 (D.C. Cir. 1973); Essex Chemical Corp. v. Ruckelshaus, 486 F. 2d 427, 439 (D.C. Cir. 1973). This issue was discussed fully in the April 29, 1996 proposal and in a number of other EPA documents, see, for example, 54 FR 41568 (October 19, 1989) and 61 FR at 18808 (April 29, 1996) and other sources cited therein.

The soil treatment standards promulgated today will significantly improve management of contaminated soil and remediations that involve contaminated soil. However, the Agency emphasizes that today's rule does not resolve the larger, more fundamental issues associated with application of RCRA Subtitle C to remediation generally. The Agency maintains that additional reform is needed to address, more fundamentally, the application of certain RCRA subtitle C requirements to all remediation wastes, including contaminated soil. The Agency will continue to participate in discussions of potential legislation to promote this additional needed reform. If legislation is not forthcoming, the Agency may reexamine its approach to remediation waste management, including the soil treatment standards.

B. Detailed Analysis of Soil Treatment Standards

All land disposal restriction treatment standards must satisfy the requirements of RCRA section 3004(m) by specifying levels or methods of treatment that "substantially diminish the toxicity of the waste or substantially reduce the likelihood of migration of hazardous constituents from that waste so that short-term and long-term threats to human health and the environment are minimized." As EPA has discussed many times, the RCRA Section 3004(m) requirements may be satisfied by technology-based standards or risk-based standards. This conclusion was upheld in Hazardous Waste Treatment Council v. EPA, 886 F.2d 355, 362–64 (D.C. Cir. 1989), where technology-based LDR treatment standards were upheld as a permissible means of implementing RCRA Section 3004(m) provided they did not require treatment beyond the point at which threats to human health and the environment are minimized. Today's treatment standards for contaminated soils are primarily technology-based; however, a variance from the technology-based standards is allowed when EPA or an authorized state makes a site-specific determination that threats posed by land disposal of any given volume of contaminated soil are minimized at higher concentrations.

1. Technology Basis for Soil Treatment Standards

The land disposal restriction treatment standards for soil require that concentrations of hazardous constituents subject to treatment be reduced by ninety percent (90%) with treatment for any given constituent capped at ten times the universal treatment standard (10 X UTS). In other words, if treatment of a given constituent to meet the 90% reduction standard would reduce constituent concentrations to less than 10 X UTS, treatment to concentrations less than 10 X UTS is not required. This is commonly referred to as "90% capped by 10xUTS."

As first discussed in the September 14, 1993 proposal, the Agency has not used the statistical methods historically used in the land disposal restriction program to establish the soil treatment standards. In the past, the Agency has typically evaluated treatability data to identify the "most difficult to treat" waste and established treatment standards based on a statistical analysis of data from the best demonstrated available treatment technology for that waste. See, for example, 55 FR 26594 and 26605, June 23, 1989. While the existing regulations allow treatment using any technology that will satisfy the treatment standards, the practical impact of that approach is that treatment using the most aggressive treatment technology available (i.e., for organic constituents, destruction of organic constituents based upon the performance of incineration) is often necessary to achieve the treatment standards.

For contaminated soil, the Agency has chosen to establish technology-based soil treatment standards at levels that are achievable using a variety of common remedial technologies which destroy, remove or immobilize substantial amounts of hazardous constituents. 58 FR 48129 (September 14, 1993). The levels chosen—90% reduction capped at 10 X UTS—are within the zone of reasonable levels the Agency could have selected as treatment standards for contaminated soil.

Soil treatability data from EPA's Soil Treatment Database indicate that the soil treatment standards are achievable and that the Agency has selected a reasonable level of performance for the standard. After screening the Database to eliminate data from tests reflecting poorly designed or operated treatment, tests where EPA believes inappropriate technologies were applied (for example, data from "immobilization" of organic constituents), and other inappropriate data, the Agency was left with 2,541 data pairs representing treatment of eighty hazardous constituents including nine BDAT list metals.[17] EPA then analyzed these data to determine if the soil treatment standards could be reliably achieved using demonstrated soil treatment technologies. Based on this analysis, the Agency concluded that the soil treatment standards can be reliably achieved using a variety of available soil treatment technologies. The Agency concluded that the soil treatment standards can be reliably achieved using: biological treatment, chemical extraction, dechlorination, soil washing, stabilization and thermal desorption. Of course, since soil treatment is generally matrix dependent, the exact treatment technology which

[17] A complete discussion of the Agency's method for screening the Soil Treatment Database can be found in the LDR Phase II proposal (58 FR 48129—48131, September 14, 1993) and the Best Demonstrated Available Technology Background Document for Hazardous Soil (August 1993).

might be applied to any given contaminated soil will depend on the specific properties of the soil and the hazardous constituents of concern. Choices about which soil treatment technology to apply should be informed by appropriate use of bench and pilot scale studies and good engineering judgement. EPA acknowledges that the treatment efficiency necessary to achieve the soil treatment standards will depend on, among other things, the initial concentrations of hazardous constituents in any given volume of contaminated soil. Thus, not all soil treatment technologies will be capable of treating every contaminated soil to meet the standards adopted in this rule. However, the Agency finds that the soil treatment standards typically can be achieved by at least one of the demonstrated technologies, even in the case of hard-to-treat hazardous constituents such as dioxins and furans, polychlorinated biphenyls, and polynuclear aromatics.

Furthermore, the Agency has concluded that it is appropriate to express the soil treatment standards as a treatment performance goal capped by specific treatment levels. More specific standards, for example, a single numerical standard for all soil, could be counterproductive—less often achievable—given the varying combinations of hazardous constituents and soil properties that might be encountered in the field. 58 FR 48130 (September 14, 1993). An express objective of this rule is to increase the range of appropriate treatment alternatives available to achieve the LDR treatment standards in soil to increase the likelihood that more remediations will include treatment as a component of the remedy. This objective could be impeded by adopting single numeric values as treatment standards, since that approach would reduce needed flexibility. The resulting soil treatment standards, while still technology-based, thus depart from EPA's past methodology developed for process wastes in that they are not based exclusively on the application of the most aggressive technology to the most difficult to treat waste and are not expressed as a single numeric value.

Like any land disposal restriction treatment standard, the soil treatment standards may be achieved using any treatment method except treatment methods which involve impermissible dilution (e.g., addition of volume without destroying, removing or immobilizing hazardous constituents or transfer of hazardous constituents from soil to another medium such as air). For organic constituents, the soil treatment standards for volatile organic constituents are based on the performance of biotreatment, chemical extraction, dechlorination, thermal desorption or soil vapor extraction. The standards for semivolatile organic constituents are based on the performance of biotreatment, chemical extraction, dechlorination, soil washing, thermal desorption, or soil vapor extraction. The standards for organochlorine pesticides are based on the performance of biotreatment, dechlorination, hydrolysis, or thermal desorption. The standards for phenoxyacetic acid pesticides are based on the performance of dechlorination. The standards for polychlorinated biphenyls are based on the performance of chemical extraction, dechlorination, or thermal desorption. The standards for dioxins and furans are based on the performance of dechlorination or thermal desorption. EPA does not have specific data in the record on treatment of organophosphorous insecticides. Because they are based on a similar chemical structure, these contaminants, however, are likely as difficult to treat as other polar nonhalogenated organic compounds and are expected to respond to treatment in a manner similar to other polar nonhalogenated phenols, phenyl ethers, and cresols. Therefore, EPA believes that organophosphorous insecticides can be treated using the same technologies as would otherwise be used to treat polar nonhalogenated organics, i.e., biotreatment, chemical extraction, or thermal desorption. For all organic constituents the soil treatment standards are also achievable using combustion. EPA notes also that a number of judicial opinions have upheld EPA's extrapolation of achievability results for technology-based treatment standards based on chemical structure and activity similarity, as has been used here. See, e.g., *Chemical Manufacturers Ass'n* v. *EPA*, 870 F. 2d 177, 248 (5th Cir. 1989) and *National Ass'n of Metal Finishers* v. *EPA*, 719 F. 2d 624, 659 (3d Cir. 1983). For metals, the soil treatment standards are based on the performance of stabilization, and for mercury, chemical extraction. Achievability of the soil treatment standards is discussed, in detail, in section VII.B.8 of today's preamble.

a. Measuring Compliance With the Soil Treatment Standards For hazardous constituents which have a treatment standard measured by total waste analysis (i.e. standards for organic constituents and for cyanide), compliance with the 90% reduction standard should generally be measured using total constituent concentrations. For hazardous constituents which have a treatment standard measured based on concentrations in a TCLP extract (i.e., standards for metals and for carbon disulfide, cyclohexanone and methanol), compliance with the 90% reduction standard should generally be measured in leachate using the toxicity characteristic leaching procedure. The exceptions to these rules would be, for example, if soils contaminated with metal constituents were treated using a technology which removed or destroyed, rather than stabilized, metals. In an example like this, compliance with the 90% reduction standards should generally be measured using total constituent concentrations.

EPA takes this opportunity to clarify that when establishing the concentrations of hazardous constituents in any given volume of contaminated soil from which the 90% reduction will be measured, normal soil characterization techniques and procedures for representative sampling should be used. For example, it is not necessary to measure the 90% reduction from the soil sample with the lowest concentrations of hazardous constituents. EPA will publish additional guidance on establishing and validating 90% reduction levels for contaminated soil in the near future.

Today's rule does not change existing policies or guidance on soil sampling or site characterization. Although soil is often characterized using composite sampling, EPA notes that, consistent with the way the Agency measures compliance with other LDR treatment standards, compliance with the soil treatment standards will be measured and enforced using grab samples. This is appropriate because well-designed and well-operated treatment systems should ensure that soil is uniformly treated.

b. Major Comments A number of commenters expressed concern about the achievability of the soil treatment standards and/or the methodology EPA used to develop the soil treatment standards. These concerns are discussed in Section VII.B.8 of today's preamble and in the response to comments document, available in the docket for today's rulemaking.

2. The Soil Treatment Standards Satisfy RCRA Section 3004(m) Requirements

The technology-based "90% capped by 10 X UTS" treatment standard for contaminated soil is sufficiently stringent to satisfy the core requirement of RCRA Section 3004(m) that short-term and long-term threats to human health and the environment posed by

land disposal are minimized. Technology-based standards provide an objective measure of assurance that hazardous wastes are substantially treated before they are land disposed, thus eliminating the "long-term uncertainties associated with land disposal." Eliminating these uncertainties was a chief Congressional objective in prohibiting land disposal of untreated hazardous wastes. Hazardous Waste Treatment Council v. EPA, 886 F.2d at 361–64. In addition, the extent of treatment required, 90 % reduction capped at treatment to concentrations within an order of magnitude of the UTS, "substantially" reduces mobility or total concentrations of hazardous constituents within the meaning of RCRA Section 3004(m)(1).

EPA has made two changes from proposal which strengthen the soil treatment standards to assure that they minimize threats to human health and the environment. First, the Agency has modified its approach to which hazardous constituents will be subject to treatment. In today's rule, when the soil treatment standards are used, EPA requires treatment for all hazardous constituents reasonably expected to be present in contaminated soil when such constituents are initially found at concentrations greater than ten times the universal treatment standard. This treatment is required both for soil contaminated by listed hazardous waste and soil that exhibits (or exhibited) a characteristic of hazardous waste. Constituents subject to treatment are discussed further in Section VII.B.4 of today's preamble.

To further ensure that contaminated soil treated to comply with the soil treatment standards is safely managed, EPA has included additional restrictions on the use of treated contaminated soil in hazardous waste-derived products that are used in a manner constituting disposal (i.e., when such products will be placed on the land). The restrictions on use of treated contaminated soil in hazardous waste-derived products that are used in a manner constituting disposal are discussed in Section VII.B.5 of today's preamble.

Finally, the Agency reiterates that, in the remediation context, in assessing whether threats posed by land disposal have been minimized, one should appropriately consider the risks posed by leaving previously land disposed waste in place as well as the risks posed by land disposal of waste after it is removed and treated. 62 FR at 64506 (December 5, 1997). For example, if a treatment standard for organic constituents based on performance of incineration typically results in already land disposed materials such as contaminated soils being capped in place rather than more aggressively remediated, threats posed by land disposal of the waste ordinarily would not be minimized. Conversely, a treatment standard that results in substantial treatment followed by secure land disposal can be said to minimize threats, taking into account the totality of threats posed (i.e. including those posed if the soil were left in place untreated). *Id.* The soil treatment standards will ordinarily ensure that contaminated soil is appropriately treated within the meaning of RCRA Section 3004(m), considering both the threats posed by new land disposal of treated soil and the threats posed by on-going land disposal of existing contaminated soil (e.g., if the soil were left in place untreated).

EPA recognizes that some people may be concerned that a situation may arise where the soil treatment standards are at levels that are higher than those that EPA or an authorized state believes should be required for soil cleanup under a cleanup program. The Agency acknowledges that this may occur. The soil treatment standards, like other land disposal restriction treatment standards, are based on the performance of specific treatment technologies. As discussed earlier in today's preamble, technology-based standards have been upheld as a permissible means of implementing RCRA Section 3004(m). Most soil cleanup levels are based not on the performance of specific treatment technologies but on an analysis of risk. For this reason, technology-based treatment standards will sometimes over-and sometimes under-estimate the amount of treatment necessary to achieve site-specific, risk-based goals.

The purpose of the land disposal restriction treatment standards is to ensure that prohibited hazardous wastes are properly pre-treated before disposal (i.e., treated so that short- and long-term threats to human health and the environment posed by land disposal are minimized). As discussed above, the Agency believes the soil treatment standards promulgated today fulfill that mandate for soil that contains prohibited listed hazardous waste or exhibits a characteristic of prohibited hazardous waste. However, technology-based treatment standards are not necessarily appropriate surrogates for site-specific risk-based cleanup levels. In a circumstance where the soil treatment standards result in constituent concentrations that are higher than those determined, on a site-specific basis, to be required for soil cleanup, existing remedial programs such as RCRA Corrective Action, CERCLA and state cleanup programs could be applied to ensure that remedies are adequately protective. These programs already ensure protection of human health and the environment when managing most contaminated soils—i.e., soils that are not subject to the LDRs—and other remediation wastes. Furthermore, as discussed later in today's rule, treated contaminated soil would remain subject to regulation under RCRA Subtitle C unless and until EPA or an authorized state made an affirmative decision that the soil did not contain hazardous waste or, in the case of characteristic soil, no longer exhibited a hazardous characteristic.

3. Variance From the Soil Treatment Standards at Risk-Based Levels

EPA has long indicated that its preference would be to establish a complete set of risk-based land disposal treatment standards at levels that minimize short- and long-term threats to human health and the environment. See, for example, 55 FR at 6641 (Feb. 26, 1990). However, the difficulties involved in establishing risk-based standards on a nationwide basis are formidable due in large part to the wide variety of site-specific physical and chemical compositions encountered in the field and the uncertainties involved in evaluating long-term threats posed by land disposal. *Id.*; 60 FR 66380—66081 (Dec. 21, 1995). For these reasons the Agency has chosen to establish land disposal restriction treatment standards based on the performance of specific treatment technologies. Although technology-based treatment standards are permissible, they may not be established at levels more stringent than those necessary to minimize short and long-term threats to human health and the environment. Hazardous Waste Treatment Council, 886 F. 2d at 362 (land disposal restriction treatment standards may not be established, "beyond the point at which there is not a "threat" to human health or the environment").

While using risk-based approaches to determine when threats are minimized on a national basis has proven extremely difficult, these difficulties will diminish when evaluating risks posed by a specific contaminated soil in a particular remediation setting since, during remediation, one typically has detailed site-specific information on constituents of concern, potential human and environmental receptors, and potential routes of exposure. For this reason, EPA is establishing a site-specific variance from the technology-based soil treatment standards, which

can be used when treatment to concentrations of hazardous constituents greater (i.e., higher) than those specified in the soil treatment standards minimizes short- and long-term threats to human health and the environment. In this way, on a case-by-case basis, risk-based LDR treatment standards approved through a variance process could supersede the technology-based soil treatment standards. This approach was first discussed in the September 14, 1993 proposal, where EPA proposed that determinations that contaminated soil did not or no longer contained hazardous waste could supersede LDR treatment standards, if the "contained-in" level also constituted a "minimized threat" level. It was repeated in the April 29, 1996 proposal where the Agency proposed that, in certain circumstances, variances from land disposal restriction treatment standards could be approved in situations where concentrations higher than the treatment standards minimized threats.[18] 58 FR at 48128 (September 14, 1993) and 61 FR at 18811 and 18812 (April 29, 1996).

At this time, EPA is allowing the risk-based variances only for contaminated soils. The Agency believes this limitation is appropriate for a number of reasons. First, contaminated soils are most often generated during agency overseen cleanups, such as CERCLA cleanups, RCRA corrective actions or state overseen cleanups. This type of involvement in cleanups positions EPA and authorized states to appropriately consider site-specific, risk-based issues. Second, during remediation, experts and field personnel typically gather detailed site-specific information on risks posed by specific hazardous constituents or combinations of hazardous constituents, potential direct and indirect exposure routes, risk pathways and human and environmental receptors. Through application of this information, overseeing agencies can eliminate many of the long-term uncertainties associated with land disposal and, therefore, make appropriate risk-based decisions regarding the extent of treatment needed to minimize short- and long-term threats to human health and the environment from any given hazardous constituent or combination of hazardous constituents. EPA and state officials already routinely make these types of decisions when developing site-specific, risk-based cleanup levels and when making decisions about whether any given contaminated medium contains hazardous waste.[19] After experience implementing the site-specific minimize threat variance for contaminated soil, the Agency may consider extending it to other environmental media and remediation wastes.

Some commenters expressed concern that allowing site-specific, risk-based minimize threat determinations would abrogate the Agency's responsibilities under RCRA Section 3004(m). The Agency strongly disagrees. RCRA Section 3004(m) requires EPA to establish "levels or methods of treatment, if any. * * *." In the case of contaminated soil, EPA is establishing those levels today based on the performance of available, appropriate soil treatment technologies. Providing a variance process to modify a level or method of treatment on a case-by-case basis reduces the likelihood that in any particular situation technology-based treatment standards will result in treatment beyond the point at which threats are minimized. The Agency is requiring that minimize threat variance determinations for contaminated soils be evaluated using the existing site-specific variance process set out in 40 CFR 268.44(h). EPA recently added language to this provision to clarify that variances cannot be approved without opportunity for public participation, including notice by appropriate means, opportunity for public comment and adequate explanation of an ultimate determination. 62 FR at 64507 (Dec. 5, 1997).

While not required, EPA anticipates that decisions about site-specific minimize threat decisions variances will often be combined with decisions that soil no longer contains hazardous waste. As discussed later in today's preamble, Agency guidance on "contained-in" determinations is essentially the same as the requirements for site-specific, risk-based minimize threat determinations promulgated today. For that reason, EPA believes it will always be appropriate to combine a contained-in determination with a site-specific, risk-based minimize threat variance. In these cases, EPA encourages program implementors and facility owners/operators to include information about the "contained-in" decision in the public notice of the site-specific minimize threat variance. In cases where a site-specific minimize threat variance is combined with a decision that a soil no longer contains hazardous waste, once treated to comply with the treatment standard imposed by the variance, the soil would no longer have any obligations under RCRA Subtitle C and could be managed—including land disposed—without further control under RCRA Subtitle C. The contained-in policy is discussed in more detail in Section VII.B.8 and Section VII.E of today's preamble.

EPA reminds program implementors that, consistent with the rest of the land disposal restriction program, site-specific determinations that threats are minimized cannot be based on the potential safety of land disposal units, or engineered structures such as liners, caps, slurry walls or any other practice occurring after land disposal. American Petroleum Inst. v. EPA, 906 F.2d 729, 735–36 (D.C. Cir. 1990) (land treatment cannot be considered in determining whether threats posed by land disposal have been minimized because land treatment is a type of land disposal and section 3004(m) requires that threats be minimized before land disposal occurs); see also S. Rep. No. 284, 98th Cong. 1st sess. at 15, stating that engineered barriers cannot be considered in assessing no-migration variances because "[a]rtificial barriers do not provide the assurances necessary to meet the standard." This means that site-specific minimize threat determinations must be based on the inherent threats any given contaminated soil would pose. The Agency recognizes that this will have the effect of precluding site-specific minimize threat variances for remedies that rely, even in part, on capping, containment or other physical or institutional controls. In

[18] In the April 29, 1996 proposal, the Agency proposed to limit variances based on a site-specific minimize threat determination to contaminated soils where all concentrations of hazardous constituents were below a "bright line," that is, below a certain risk level. The Agency also requested comment on extending site-specific minimize threat variances to other contaminated soils. Based on further consideration and consideration of comments, the Agency is persuaded that a site-specific minimize threat variance should be available to all contaminated soils. The Agency believes this is proper because the outcome of a site-specific, risk-based minimize threat variance—alternative, site-specific LDR treatment standards based on risk—will be the same regardless of the initial concentrations of hazardous constituents. In any case, the Agency is not, at this time, taking action on the portion of the April 29, 1996 proposal that would have established a "bright line" to distinguish between higher- and lower-risk media. If, in the future, the Agency takes action to establish a bright line, it will address the relationship of a bright line to site-specific minimize threat variances.

[19] While not forbidden, the Agency believes that site-specific, risk-based minimize threat determinations will rarely be made in the context of an independent or voluntary cleanup action, since, in these types of actions, an overseeing Agency will not, typically, have been involved in the identification exposure pathways and receptors of concern or the calculation of site-specific, risk-based cleanup levels. Of course, generators could apply for a site-specific, risk-based minimize threat variance during an independent or voluntary cleanup and, provided EPA or an authorized state agreed that the proposed alternative treatment standards minimized threats considering appropriate exposure pathways and receptors, a variance could be approved.

addition to being compelled by the statute, the Agency believes this approach is proper, in that it may encourage remedy choices that rely more predominantly on treatment to permanently and significantly reduce the concentrations (or mobility) of hazardous constituents in contaminated soil. The Agency has a strong and longstanding preference for these types of more permanent remedial approaches.

In addition, at a minimum, alternative land disposal restriction treatment standards established through site specific, risk-based minimize threat variances should be within the range of values the Agency generally finds acceptable for risk-based cleanup levels. That is, for carcinogens, alternative treatment standards should ensure constituent concentrations that result in the total excess risk from any medium to an individual exposed over a lifetime generally falling within a range from 10^{-4} to 10^{-6}, using 10^{-6} as a point of departure and with a preference, all things being equal, for achieving the more protective end of the risk range. For non-carcinogenic effects, alternative treatment standards should ensure constituent concentrations that an individual could be exposed to on a daily basis without appreciable risk of deleterious effect during a lifetime; in general, the hazard index should not exceed one (1). Constituent concentrations that achieve these levels should be calculated based on a reasonable maximum exposure scenario—that is, based on an analysis of both the current and reasonably expected future land uses, with exposure parameters chosen based on a reasonable assessment of the maximum exposure that might occur. The Agency believes these represent an appropriate range of minimum values for site-specific, risk-based minimize threat determinations because sites cleaned up to these levels are typically released from regulatory control under the Federal CERCLA program and the RCRA corrective action program. See, for example, the National Contingency Plan (55 FR 8666, March 8, 1990) the 1990 RCRA Corrective Action Subpart S Proposal (55 FR 30798, July 27, 1990), and the 1996 RCRA Corrective Action Subpart S ANPR (61 FR 19432, May 1, 1996). In addition to achieving protection of human health, alternative treatment standards must ensure that environmental receptors are protected and must also ensure that no unacceptable transfer of contamination from one medium to another, for example, from soil to ground water, will occur.[20] Protection of environmental receptors and against cross-media contamination may, in some cases, require more stringent (i.e., lower) alternative treatment standards than would be necessary to protect human health alone. The Agency recognizes that this approach is different from the approach used in developing national risk-based minimize threat levels proposed in the Hazardous Waste Identification Rule (HWIR-Waste). 60 FR 66344 (December 21, 1995). This difference is proper, in that the HWIR-Waste proposal contemplated nationally-applicable risk-based LDR treatment standards and, therefore, had to consider the myriad of potential exposure pathways and receptors which might occur at any given site, nation wide. A site-specific minimize threat determination is informed by actual and reasonable potential exposure pathways and receptors at a specific land disposal location.

Although not expressly limited to land disposal of contaminated soil on-site, EPA anticipates that site-specific minimize threat variances will, most often, be applied to these activities. The basis for developing an alternative land disposal restriction treatment standard during the site-specific minimize threat variance is application of risk information about specific exposure pathways and receptors of concern. To apply such a variance to off-site land disposal, the treatment standard would have to be informed by the exposure pathways and receptors present at the off-site land disposal areas (assuming no physical or engineered structures or other post-land-disposal controls). While such an analysis is allowed, this information is not, to the Agency's knowledge, routinely gathered during site remediation.

Most commenters supported the concept of using a treatment variance to reduce the likelihood that, in any particular case, technology-based soil treatment standards might prompt treatment beyond the point at which threats to human health and the environment are minimized.

One commenter was concerned that establishing a risk-based minimize threat variance without adequate minimum standards would be contrary to law and impossible to oversee. EPA was, in part, persuaded by these comments and has added a requirement that, at a minimum, alternative LDR treatment standards approved through a site-specific minimize threat variance be within the range of acceptable values the Agency typically uses for cleanup decisions, as discussed above. In addition, as discussed above, the Agency has clarified that, unlike some CERCLA or RCRA corrective action remedies, site-specific minimize threat variances may not rely on post-land disposal controls.

4. Constituents Subject to Treatment

For soil contaminated by listed hazardous waste, EPA proposed that treatment would be required for each hazardous constituent originating from the contaminating waste. For soil which exhibits (or exhibited) a characteristic of hazardous waste, EPA proposed that treatment would be required: (1) in the case of TC soil, for the characteristic contaminant; (2) in the case of ignitable, reactive or corrosive soil, for the characteristic property; and, (3) in both cases, for all underlying hazardous constituents. 61 FR at 18809 (April 29, 1996). Under the 1996 proposal, treatment would have been required only when those constituents were initially present at concentrations greater than ten times the universal treatment standard. EPA also requested comment on, among other things, whether, for soil contaminated by listed hazardous waste, treatment should be required for all underlying hazardous constituents present at concentrations above ten times the UTS. Underlying hazardous constituent is defined in 40 CFR 268.2(i) as, "any constituent listed in 40 CFR 268.48 table UTS, except fluoride, sulfides, vanadium, selenium, and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste, at a concentration above the constituent-specific UTS treatment standards."

Many commenters supported the proposed approach. Some commenters, however, expressed concern that, because contaminated soil often contains numerous hazardous constituents from a variety of sources, limiting treatment of soil contaminated by listed hazardous waste to constituents originating from the contaminating waste might result in soil contaminated with listed waste undergoing less treatment than soil which exhibits (or exhibited) a characteristic of hazardous waste. One commenter also asserted that the proposed approach to constituents subject to treatment was, in the case of soil contaminated by listed hazardous waste, inconsistent with the Chemical Waste opinion. On further consideration, EPA was persuaded that it is prudent to apply the logic of the

[20] Unacceptable cross-media transfer would include, for example, transfer of contaminants from soil to air in excess of applicable air emission standards.

Chemical Waste opinion both to soil contaminated by listed hazardous waste and to soils which exhibit a characteristic of hazardous waste.

As the Agency explained in the 1996 proposal, contaminated soils are potentially contaminated with a wider range of hazardous constituents than most pure hazardous wastes generated by on-going industrial processes—in no small part because contaminated soils generally reflect uncontrolled disposal settings. 58 FR at 48124 (September 14, 1993). Since the Chemical Waste opinion addressed a similar situation (certain characteristic hazardous wastes that might contain a variety of hazardous constituents), the Agency is persuaded that it is prudent to apply the logic of the Chemical Waste opinion to contaminated soil and require treatment of all underlying hazardous constituents. See Chemical Waste Management v. US EPA, 976 F.2d at 16–18 (D.C. Cir 1992). Therefore, when the soil treatment standards are used, today's final rule requires that all contaminated soil subject to the LDRs be treated to achieve the soil treatment standards for each underlying hazardous constituent reasonably expected to be present in the soil when such constituents are initially found at concentrations greater than ten times the universal treatment standard. In addition to treatment of all underlying hazardous constituents as discussed above, as proposed, characteristic soil must also be treated, in the case of TC soil, for the TC constituent and, in the case of ignitable, corrosive, or reactive soil, for the characteristic property.

Although, when the soil treatment standards are used, treatment is now required for each underlying hazardous constituent when such constituents are initially found at concentrations greater than ten times the universal treatment standard, it will not be necessary to monitor soil for the entire list of underlying hazardous constituents. Generators of contaminated soil can reasonably apply knowledge of the likely contaminants present and use that knowledge to select appropriate underlying hazardous constituents, or classes of constituents, for monitoring. This is consistent with the approaches EPA typically takes in remedial programs, where it emphasizes that remediation managers should focus investigations on constituents of concern and with regulations that allow generators to rely on knowledge to determine whether any given solid waste is hazardous. *Cf.* 61 FR at 19444 where EPA encouraged remediation managers to "tailor [facility investigations] to the specific conditions and circumstances at the facility and focus on the units, releases, and exposure pathways of concern."

For nonanalyzable constituents, EPA is promulgating the approach discussed in both the September 14, 1993 and the April 29, 1996 proposals. In situations where contaminated soil contains both analyzable and nonanalyzable organic constituents, treating the analyzable constituents to meet the soil treatment standards is also reasonably expected to provide adequate treatment of the nonanalyzable constituents. In situations where contaminated soil contains only nonanalyzable constituents (i.e., soil contaminated only by nonanalyzable U or P listed wastes), treatment using the specified method for the appropriate U or P listed waste is required. 61 FR at 18810, April 29, 1996. Most commenters supported this approach.

5. Relationship of Soil Treatment Standards to Naturally Occurring Constituents

In the April 29, 1996 proposal EPA requested comment on whether concentrations of naturally occurring constituents should be evaluated when identifying constituents subject to treatment. Commenters who addressed this issue overwhelmingly recommended that, for naturally occurring constituents, EPA cap LDR treatment requirements for soil at natural background concentrations. After considering these comments, EPA was persuaded that treatment to comply with LDRs should not be required if constituent concentrations fall below naturally occurring background concentrations, provided the soil will continue to be managed on site or in an area with similar natural background concentrations. If soil will be sent for land disposal off-site, compliance with LDRs is required, since the Agency believes that natural background concentrations on-site will not automatically correspond to natural background concentrations at a remote land disposal facility.

The Agency notes that, for purposes of this discussion, natural background concentrations are constituent concentrations that are present in soil which has not been influenced by human activities or releases. Since these constituent concentrations are present absent human influence and EPA has determined that soil (like other environmental media) is not, of itself, a waste but may be regulated as hazardous waste under RCRA only when it contains (or contained) waste, EPA is not convinced the Agency would have the authority to require compliance with LDRs when constituent concentrations fall below background concentrations even if it felt compelled to do so. (Of course, such constituents could be regulated as hazardous constituents under state and Federal cleanup authorities, including RCRA corrective action and other authorities.)

Since natural background concentrations may vary across geographic areas, and to ensure that LDRs will only be capped at background where appropriate, EPA will require that individuals who wish to cap LDR treatment at natural background concentrations apply for and receive a treatment variance. EPA will presume that when LDRs would require treatment to concentrations that are less than natural background, such a variance will be appropriate, based on the finding that it is inappropriate, for contaminated soil, to require treatment to concentrations less than natural background concentrations. This issue has been clarified in today's final regulations, see 40 CFR 268.44(h)(4).

6. Restrictions on Use of Treated Hazardous Contaminated Soil in Products Used in a Manner Constituting Disposal

Although, as discussed earlier in today's preamble, EPA believes the soil treatment standards satisfy the requirements of RCRA Section 3004(m), EPA has determined that additional restrictions are necessary for hazardous contaminated soils that are used to produce products which are, subsequently, used in a manner constituting disposal (i.e., used to produce products which are placed in or on the land). Under current regulations, hazardous waste-derived products that are used in a manner constituting disposal must, among other things, comply with the applicable land disposal restriction treatment standards in 40 CFR part 268.40, that is, the Universal Treatment Standards. See 40 CFR 266.23(a). EPA has concluded that hazardous contaminated soil used to produce products which are, subsequently, used in a manner constituting disposal must continue to meet the universal treatment standards. Such products, then, are not eligible for the soil treatment standards promulgated today. EPA has made this decision for several reasons. First, EPA has chosen technology-based treatment standards (such as today's soil treatment standards) as a means of implementing the LDR statutory requirements in order to eliminate as many of the uncertainties associated with land disposal of hazardous waste as possible.

55 FR at 6642 (Feb. 26, 1990). These uncertainties increase sharply when one considers possible dispositions of hazardous waste-derived products used in a manner constituting disposal. These products can be placed virtually anywhere, compounding potential release mechanisms, exposure pathways, and human and environmental receptors. 62 FR at 64506 (Dec. 5, 1997) and 53 FR at 31197–98 (August 17, 1988). For these reasons, the Agency in 1988 determined that these wastes should be treated to reflect the best treatment available, 53 FR at 31197–98, and the Agency believes this reasoning continues to hold with respect to contaminated soils. Second, EPA has determined that the soil treatment standards adopted in today's rule are justified, in many instances, in order to encourage remediation involving treatment over remedies that involve leaving un-treated contaminated soils in place. The Agency is less sure that this is a desirable incentive if the contaminated soils are to be used in a manner constituting disposal, again because of the uncertainties posed by this method of land disposal.

Note that EPA has explained, however, that remediation activities involving replacement of treated soils onto the land is not a type of use constituting disposal, in part, because it is a supervised remediation instead of an unsupervised recycling activity. 62 FR 26063 (May 12, 1997). This interpretation is not affected by today's rulemaking.

7. Availability of Soil Treatment Standards

EPA proposed that soil-specific land disposal restriction treatment standards would be available only for contaminated soils managed under an agency approved, site-specific cleanup plan termed a Remediation Management Plan or "RMP." The Agency also specifically requested comment on whether soil-specific treatment standards should be made available to all contaminated soil. 61 FR at 18813 (April 29, 1996). The majority of commenters who addressed this issue strongly supported extending the soil treatment standards to all contaminated soil. These commenters argued that extending soil-specific LDRs to all contaminated soil would encourage voluntary and independent cleanups, especially at low and medium priority sites where a regulatory agency might not have the resources to provide real-time oversight through a "RMP." After considering these comments, EPA is persuaded that the soil treatment standards should be available for all contaminated soil and has revised the regulations accordingly.

EPA's thinking in proposing to require a site-specific remediation management plan to take advantage of the soil treatment standards was that site-specific oversight, and potentially modification of the treatment standards, would be necessary to ensure that all contaminated soils were appropriately treated. 61 FR at 18807 (April 29, 1996). However, EPA now concludes that the soil treatment standards will ensure adequate treatment of all contaminated soils for two reasons.

First and primarily, the residuals from treatment of hazardous contaminated soil will typically continue to be regulated as hazardous waste and will remain subject to applicable RCRA Subtitle C requirements. 61 FR at 18810 (April 29, 1996). Non-soil residuals, such as wastes generated during application of separation technologies, will be regulated as hazardous wastes if they exhibit a characteristic of hazardous waste or if they derive from treating a soil which contains listed hazardous waste. Therefore, these types of non-soil residuals will typically be subject to the universal treatment standards in 40 CFR 268.40. See 57 FR at 37240 (Aug. 18, 1992) where EPA took the same approach for residues from treating contaminated debris. Soil residuals will also be regulated as hazardous waste unless it is determined that the soil does not contain hazardous waste.[21] For example, application of a thermal desorption technology would likely generate two types of residuals: treated soil (soil residual) and concentrated contaminants removed from the soil and captured in an air pollution control device (non-soil residual). If the contaminated soil contained a listed hazardous waste or exhibited a characteristic of hazardous waste at the time of treatment, both residuals would continue to be subject to RCRA Subtitle C regulations. The non-soil residual would be required to comply with applicable universal treatment standards prior to land disposal; the soil residual would generally require land disposal in a Subtitle C unit unless a "contained-in" determination was made. Therefore, although a remediation management plan is no longer required to take advantage of the soil treatment standards, a site-specific decision is still required before treated contaminated soil can exit the system of RCRA regulations.

Second, as noted earlier, EPA has extended the treatment requirement to all underlying hazardous constituents reasonably expected to be present in contaminated soils when such constituents are found at initial concentrations greater than ten times the universal treatment standard and retained current treatment requirements for hazardous contaminated soils used to produce products that are subsequently used in a manner constituting disposal.

8. Achievability of Contaminated Soil Treatment Standards

The soil treatment standards promulgated today are based primarily on the data for soil treatability found in EPA's Soil Treatment Database (SDB). See, Best Demonstrated Available Treatment Background Document for Hazardous Soils, August 1993 and LDR Phase 2 proposal at 58 FR 48122, Sept. 14, 1993. Data from the soil treatment database are corroborated by more recent performance data for non-combustion treatment of remediation wastes. See Soil Treatability Analysis: Analysis of Treatability Data for Contaminated Soil Treatment Technologies (April 1998, USEPA) and references cited in note 5 below.

The soil treatment data base contains 6,394 pairs of data points (for the same sample, one datum for untreated soil and one datum for treated soil) describing the treatment of hazardous constituents in contaminated soils managed under the RCRA and the Superfund programs. After screening the database to eliminate data from tests reflecting poorly designed or operated treatment, tests where EPA believes inappropriate technologies were applied (for example, data from immobilization of organic constituents) and other inappropriate data, the Agency was left with 2,541 pairs of data points. These data pairs depict treatment of ninety-four hazardous constituents, including eighty-five organic constituents and nine BDAT list metals. The retained 2,541 pairs of data points from the soil treatment database represent the treatment of organic and metal constituents by various technologies including: combustion, biological treatment, chemical/solvent extraction, dechlorination, thermal desorption, air/steam extraction, photolysis, soil washing, stabilization, and vitrification. The soil treatment database includes performance data from bench, pilot, and full scale technologies. A complete discussion of the Agency's method for

[21] The exception would be soil residuals from treatment of soils which were determined no longer to contain a listed hazardous waste or were decharacterized and yet remained subject to LDRs. In this case, since the treatment would be performed on non-hazardous soil, the soil residuals would also be considered non-hazardous.

screening the Soil Treatment Database can be found in the LDR Phase II proposal (58 FR 48129–31, September 14, 1993) and the Best Demonstrated Available Technology Background Document for Hazardous Soil (August 1993).

A number of commenters were concerned that aggregated data, i.e., the 2,541 pairs of data points representing the combined performance of combustion and non-combustion technologies, may mask the performance of non-combustion technologies alone. Commenters urged EPA to disaggregate these performance data to allow for more accurate analysis of non-combustion technology performance. As a result, EPA has disaggregated the combustion and non-combustion treatment data for purposes of analyzing the achievability of today's soil treatment standards. See generally, Soil Data Analysis: Soil Treatability Analysis of Treatability Data for Contaminated Soil Treatment Technologies (April 1998, USEPA) and Additional Information on Treatability of Contaminated Soils as Discussed in Section VII.B.8. of Phase IV Final Rule Preamble (April 1998, USEPA).

After separating out combustion data, the remaining non-combustion soil treatment data base is reduced from 2,541 to 2,143 paired data points. These 2,143 [22] data pairs depict the treatment of 72 organics [23] and nine metals in contaminated by biological treatment, chemical and solvent extraction, dechlorination, thermal desorption, air and steam stripping, hydrolysis, photolysis, soil washing, and stabilization.

As discussed earlier in today's preamble, EPA did not use the traditional BDAT approach to develop the soil treatment standards. Instead, the Agency evaluated data from the 2,143 non-combustion data pairs in the soil treatment database to identify, generally, the level of performance non-combustion soil treatment technologies achieve. In light of our multi-faceted objectives regarding remediation of contaminated soils (discussed earlier in this preamble), this approach and methodology are appropriate. As noted earlier in today's preamble, the numerical values chosen for soil treatment standards—90% reduction capped at ten times the UTS—are within the zone of reasonable values from which the Agency can properly select.

For soil contaminated with organic constituents, the retained 2,143 data pairs from the soil treatment database show generally that soils with moderate levels of contamination are more amenable to treatment by non-combustion technologies than soils with high levels of contamination. However, the data also show that the soil treatment standards promulgated today can be achieved by non-combustion technologies even in cases when soils contain elevated levels of harder-to-treat organic hazardous constituents, such as dioxins and furans, polychlorinated biphenyls (PCBs), and polynuclear aromatics (PNAs). The available data on the performance of non-combustion technologies suggest that some technologies are more effective with certain organics within specific families or chemical functional groups. For example, while many organic treatment technologies were effective in removing volatile organics from the soils, dechlorination is more effective than other non-combustion treatment technologies for treating chlorinated organics. For soil contaminated by metals, the retained 2,143 data points from the soil treatment database show that metals can typically be treated via stabilization to meet the soil treatment standards.

Although, for the reasons discussed earlier in today's preamble, EPA has elected to base the soil treatment standards on the performance of non-combustion technologies, combustion of soil is not prohibited. This is consistent with all other numerical treatment standards, which can likewise be achieved through use of any technology (other than impermissible dilution). It may be that combustion is, in fact, chosen as the remedial treatment technology at certain sites, most likely because of economic considerations (such as in the case of low soil volumes where on-site treatment units are not economically viable). Selection of the best treatment technology for the specific soil type and range of contaminants present at any given remediation site is a site-specific decision assuming, for soils subject to the LDRs, that the selected technology does not involve impermissible dilution and that today's soil treatment standards are met. Further details about the results of EPA's examination of treatment technologies for different groups of contaminants are discussed in the succeeding sections.

a. Comments. Many commenters expressed concern that the retained 2,541 data points from the soil treatment database might not adequately address the many types of soils and contaminated site scenarios that may arise in the field. Among other things, these commenters asserted that: (1) the list of chemical organic constituents for which EPA has data may be too small to extrapolate to other organics in the list of underlying hazardous constituents that must meet treatment standards; (2) for organic constituents, many of the treatment test results examined by EPA involved mostly combustion rather than non-combustion technologies; (3) for soils with multiple hazardous constituents and other complex soil matrices, the soil treatment standards could only be met via incineration; and, (4) EPA should not pool data from bench, pilot, and full scale treatment applications. For the most part, these commenters suggested that EPA either exempt hazardous contaminated soil entirely from a duty to comply with land disposal restriction treatment standards or, if hazardous contaminated soil were to remain subject to LDRs, allow risk-based treatment standards to be developed entirely on a site-by-site basis pursuant to state oversight.

EPA closely considered these comments and carefully re-evaluated the data from the soil treatment database as well as other data from more recent sources. These evaluations are summarized in the background documents for today's final rule. EPA is not, at this time, taking action to categorically exempt large volumes of hazardous remediation waste (including contaminated soil) from RCRA hazardous waste management requirements and, therefore, the issue of achievability of today's soil treatment standards is germane.

Notwithstanding the treatment results described in this section below, which support the achievability of today's soil treatment standards, EPA realizes that national, technology-based treatment standards are sometimes not achievable because of site- and waste-specific characteristics. Thus, EPA has long provided for treatment variances under these circumstances (see 40 CFR 268.44). In addition, because EPA and authorized states are in a position during remediation to make site-specific risk-based minimize threat determinations, the Agency is also adopting in today's rule a new type of variance for contaminated soils. This variance can be granted if, on a case-by-case basis, it is determined that the technology-based treatment standard

[22] One single datum from the vitrification of p,p'DDT was not included since it appears to have resulted from treatment that was not optimally designed or conducted.

[23] Out of 85 organic constituents, only 13 were treated exclusively by combustion. See, however, the discussion later in this preamble with regard to presence of data from incineration and extrapolation of data among organic constituents.

would prompt treatment beyond the point at which threats are minimized.

Fundamentally, EPA agrees with many commenters that today's land disposal treatment standards for contaminated soil may not remove all of the barriers RCRA can impose on efficient and aggressive site remediation. As discussed earlier in today's preamble, the Agency hopes the application of RCRA Subtitle C requirements to remediation of contaminated soils and other wastes will be addressed through legislation. If there is no legislative action, EPA may choose to take additional regulatory action, which may include either a re-examination of the application of LDRs to contaminated soil or other remediation wastes or a re-evaluation of today's soil treatment standards, or both. In the meantime, today's rule represents a significant improvement over the current practice of applying the treatment standards developed for pure industrial hazardous waste to contaminated soil.

b. Analysis of Data from the Soil Treatment Database. The soil treatment standards promulgated today are based EPA's Soil Treatment Database (SDB). See, Best Demonstrated Available Treatment Background Document for Hazardous Soils (August 1993); LDR Phase 2 proposal (58 FR 48122, Sept. 14, 1993); and Soil Treatability Analysis: Analysis of Treatability Data for Contaminated Soil Treatment Technologies (April 1998, USEPA) (hereinafter, this document is referred to as the "Soil Treatability Analysis Report"). General concerns about the soil treatment database (and in particular, concerns about achieving the 10 times UTS or 90% reduction standard) are addressed here. Results of our analysis of the soil treatment database data on treatment performance for various technologies are shown in Table 1 below. Results of additional analysis for various organic and metal contaminant groups are shown in Tables 2–5 below. Further details of the analysis and additional findings are contained in the technical background documents in this docket.

TABLE 1.—SUMMARY OF TREATMENT RESULTS PER TECHNOLOGY IN SOIL DATA BASE[24]

Treatment technology	Total paired data points in the soil data base	Untreated	Treated			
		Data points meeting 10 times UTS standard	Data points meeting 10 times UTS but not 90% reduction standard	Data points meeting 90% reduction but not 10 times UTS standard	Data points meeting both 10 times UTS and 90% reduction standards	Data Points failing both 10 times UTS and 90% reduction standards
Biological Treatment	250	86	176	168	109	15
Chemical Treatment	242	58	226	206	200	10
Dechlorination	154	53	134	100	84	4
Stabilization	269	140	250	239	232	12
Stripping	236	88	206	103	103	30
Washing	35	10	21	14	11	11
Thermal Desorption	957	348	833	759	692	57
Total	2143[25]	773	1846	1589	1431	139

In aggregate, the results on Table 1 indicate that the Agency's selection of standards are within the range of reasonable values for non-combustion technologies to achieve. These data show that 139 (or 6%) paired data points out of 2143 would fail to meet the 10 times UTS or 90% reduction standard. Among possible reasons for these treatment performance deviations are that some soil samples represent cases in which the selected technology was not appropriate for the range of hazardous constituents in an organic chemical admixture. A better selection of treatment technology may include either a more aggressive non-combustion technology or may involve use of two or more technology trains in order to meet the soil treatment standards. It is common practice to employ multiple treatment trains at facilities that have complex chemical mixtures or soil textures at a site. As further explained in succeeding sections of this preamble and in various background documents, EPA believes that the hazardous soil treatment standards promulgated today are within a regime of reasonable treatment levels normally achieved by non-combustion technologies. See, e.g., Soil Treatability Analysis Report and Extrapolation of Treatment Performance Data in the Soil Data Base Among Hazardous Constituents in Contaminated Soils (April 1998, USEPA).

(1) Concerns About Presence of Data from Incineration and Extrapolation of Data to Other Constituents. As mentioned earlier, EPA has segregated the available treatment data (2,541 paired data points) so that we can better examine the 2,143 paired data points describing the treatment of hazardous soils by non-combustion technologies. Although 50 organic constituents in the original 2,541 paired data points were treated by combustion (i.e., incineration), only 13 of these 50 organics were treated exclusively by combustion. These 13 hazardous constituents are: 1,2,4-trichloro-benzene; p,p'-DDD; p,p'DDE; 2,4-dichlorophenol; methoxychlor; 2,4,6-trichlorophenol; 2,4,5-trichlorophenol; carbon tetrachloride; chloroform; hexachloroethane; 1,2-dibromo-3-chloro-propane; isodrin; and gamma-BHC. None of the data describing combustion of these 13 constituents or the other 37 organics (for which there are some combustion results) were relied upon in assessing achievability of today's hazardous soil treatment limits.

With respect to commenters' concerns about extrapolating the SDB data to organic and inorganic constituents that will need to be treated, EPA analyzed the various non-combustion technologies and their average treatment efficiencies against various chemical clusters and chemical functional groups of hazardous constituents. See: (1) Extrapolation of Treatment Performance Data in the Soil Data Base Among Hazardous Constituents in Contaminated Soils (April 1998, USEPA); (2) Derivation of Treatment Achievability Results of Organic Functional Groups and Types of Compounds (April 1998, USEPA); (3) Soil Treatability Analysis Report (USEPA, 1998); and (4) Additional

[24] For discussion of these treatment data, see Soil Treatability Analysis Report, and Extrapolation of Treatment Performance Data in the Soil Data Base Among Hazardous Constituents in Contaminated Soils (April 1998, USEPA).

[25] As noted earlier, EPA examined in detail up to 2,541 pairs of data points in total, and the number of non-combustion data pairs examined is 2,143.

Information on Treatability of Contaminated Soils as Discussed in Section VII.B.8. of the Final Rule Preamble (April 1998, USEPA).

The results are summarized in Tables 2–5 below. These results show that non-combustion technologies can achieve today's soil treatment standards. 93.5% (2,004 of the 2,143 data pairs) of the treatment test results meet the 10 times UTS or 90% reduction standard. Furthermore, non-combustion technologies can meet the soil treatment standards even in cases when soils contain elevated levels of harder-to-treat organic hazardous constituents, such as dioxins and furans, polychlorinated biphenyls (PCBs), and polynuclear aromatics (PNAs). See Appendix D in Soil Treatability Analysis Report.

As noted earlier, available data on the performance of non-combustion technologies treating organics also show that some technologies are more effective with certain organics within specific families or chemical functional groups, e.g., organic treatment technologies removing volatile organics from the soils and dechlorination removing halogenated organics. Treatability tests at certain complex sites corroborate these findings of achievability from the SDB.

Regarding organics, at the Ninth Avenue Dump Site in Indiana, hazardous soils were contaminated with low to moderate concentrations of PNAs, aromatics, chlorinated aliphatics, and phthalates. Untreated constituents showed concentrations that were about the same or up to two orders of magnitude higher than today's soil treatment standards.[26] Among the volatiles were toluene (1,100 ppm), total xylene (2,100 ppm), ethylbenzene (420 ppm), 1,1,1-trichloroethane (120 ppm), trichloroethene (93 ppm), tetrachloroethene (380 ppm), 1,1-dichloroethane (81 ppm), and methylene chloride (800 ppm). The following semivolatile organics-PNAs (and their highest concentration) were phenanthrene (92 ppm) and naphthalene (84 ppm). Bis(2-ethylhexyl) phthalate, a semivolatile phthalate, was reported at 110 ppm. The soil particle distribution of the contaminated soil was not quantified, but the soil was reported as comprised primarily of sand and silt. Biotreatment achieved the following average treatment reduction efficiencies:

- Volatile chlorinated aliphatics—99.9%;
- Ethylbenzene—100%;
- Volatile aromatics—99.9%;
- Semivolatile PNAs—97.4%;
- Bis(2-ethylhexyl)phthalate—93.2%.

Regarding complex metal remediations, the full-scale stabilization study conducted at the Portable Equipment Salvage Company, a transformer and metal salvage operation in Oregon, involved untreated levels of lead up to 880 mg/l (TCLP) and zinc up to 71 mg/l (TCLP). Organics were also present—the highest sample showing 610 mg/l lead (TCLP), 14,000 ppm oil and grease, 41,000 ppm total organic carbon, and 7.1 pH. The facility conducted treatability studies on three soil textures found at the site: (1) sandy loam, (2) loamy sand, and (3) loam. The stabilized sandy loam sample showed a concentration of 0.5 ppm lead, a 99.72% reduction efficiency. The facility also treated two samples of loamy sand, one to 47 mg/l lead (TCLP) (a 93.65% reduction efficiency) and the other to 2.5 mg/l lead (TCLP) (a 99.72% reduction efficiency). The treated loam sample showed 0.10 mg/l lead, a 99.97% reduction.

More information underlying EPA's rationale for extrapolating the available treatment performance data to other organic and inorganic hazardous constituents regulated under the land disposal restrictions can be found in the RCRA Docket for this rule (see Appendix D in Soil Treatability Analysis Report) and memorandum to docket on extrapolation of treatment performance data among different hazardous constituents.

Finally, we note that even though there were treatment data on soils containing cyanide in the larger data base (6,394 paired data points), none of the retained 2,541 or 2,143 paired data points included treatment data on cyanide. However, the current UTS for cyanide is based on the performance of alkaline dechlorination, a non-combustion technology. Cyanides can form complexes with metals and organics and, therefore, technologies capable of removing both organic and metals are also able to remove cyanide from contaminated soils. As a result, it is reasonable to expect that the average treatment performance attained by treating organics in soils will also be achieved for cyanide-bearing contaminated soils. We note that, for example, 90% reduction can be achieved based on the performance efficiency that thermal desorption attained in removing PNA's (with more than five rings) and chlorinated organics from contaminated soil. These constituents are among the hardest chemical species to remove via thermal desorption. For these reasons, the Agency has concluded that today's soil treatment standard for cyanide can be achieved by a non-combustion technology as well.

(2) Technology Scale and Soil Variability Issues. As noted earlier, several commenters objected to EPA's pooling of treatment data from pilot, bench, and full scale processes, and urged EPA to consider only performance data from full-scale field studies characterizing the treatment of soil volumes. EPA prefers, generally, to rely on full scale studies for the purpose of developing and promulgating treatment standards, and this is true with respect to the soil treatment standards as well. However, in this case as well as in many prior LDR treatment standard efforts, EPA's data base includes more than just full scale data upon which EPA can properly rely. Bench and pilot scale technologies can be appropriately considered by EPA (and EPA has historically done so) in setting treatment limits as long as full scale operations of the treatment system under consideration exist or have been demonstrated on wastes/soils. Except for hydrolysis,[27] the technologies in the SDB are demonstrated full scale, and the administrative docket contains bench, pilot, and full scale studies that reflect the Agency's field experiences at contaminated sites.

Furthermore, in this rulemaking, given the variability of hazardous soils (in terms of types, concentrations and numbers of hazardous constituents and soil matrices), plus the special policy considerations associated with remediations, the Agency is adopting treatment standards from the zone of reasonable values that could be permissibly selected based upon the treatment performance data. Thus, the data are not being used so much to establish a precise performance level as to confirm the typical achievability of the promulgated standards, i.e., ten times UTS or 90% reduction.

With respect to the SDB and commenters' concerns about the impact of soil variability on achievability of the soil treatment standards by non-combustion technologies, EPA collected 6,394 pairs of data point describing the treatment of various hazardous soils.

[26] The following constituents were present at levels below the soil treatment standards: fluorene, fluoranthene, pyrene, acenaphthalene, benzo(a)anthracene, chrysene, di-n-butyl phthalate, and diphenylnitrosamine.

[27] Hydrolysis can be of normal occurrence or intentionally induced at hazardous waste sites. EPA does not have full-scale ex-situ demonstration studies on this technology but considers the data in the SDB to be indicative of what levels can be achieved.

The retained 2,143 non-combustion paired data points are reasonably sufficient to adequately describe the treatment of metal, organics, and multiple metal and organic contaminants that are frequently found at different type of sites, including both Superfund and RCRA sites. For instance, the SDB has treatment data on soils with varying textures including top soils, silty/loam soils, and clay soils. For the 14 different soil type groupings analyzed, only 139 out of 2,143 data pairs (about 6.5%) would not meet today's soil treatment standards (see Appendices C and D in Soil Treatability Analysis Report).

With respect to these 6.5% data pairs, several potential reasons exist to explain why 90 % reduction or 10 times UTS level might not have been achieved. First, the treatment study objectives may not primarily have been to test whether these standards could be met. For example, the treatment study may have been designed either to assess the feasibility of using a particular (but not necessarily optimum) technology on a particular contaminated soil, or to meet a prescribed risk-based level under a RCRA or CERCLA site remediation plan.

Second, a treatment technology may have been applied to soils contaminated with multiple hazardous constituents where the technology may have been inappropriate for a subset of those contaminants (and for which data were reported anyway). For example, air stripping is a technology that operates best on volatile organics within a given range of Henry constant values. In contrast, air stripping of semivolatile organics and metals is expected to be much poorer. (In this type of situation, a technology amendment or treatment train may be appropriate, i.e., air stripping may be improved if steam stripping is applied first to enhance the pool of semivolatiles that can respond to the physical separation treatment process.)

Third, these treatment data likely include instances when a treatment technology encountered soil heterogeneities that resulted in undertreatment of portions of the soil. For instance, during the clean up of contaminated debris and soils, detailed sampling protocols are typically developed to ensure that desired treatment constituent concentrations are met because of the deleterious impact of heterogeneous soil strata and the presence of debris on treatment technology performance. Re-processing can often be required to comply with the applicable treatment standards. Another alternative is to optimize specific technology operating parameters that can enhance the ability of the technology to meet the prescribed treatment limits. Optimization can involve: (1) feeding the correct soil/debris particle size fractions to the treatment system, (2) creating more turbulence between soil and gaseous/liquid treatment fluids, (3) using a greater-than-normal amount of chemical agents, (4) operating at the higher end of an operating temperature range, (5) adjusting the pH of the soil, (6) adding adequate pre-/post-treatment steps that address specific contaminants that may be expected to receive sub-optimal treatment, or (7) allowing longer residence time in the treatment unit.

It is not possible to determine precisely how many of these techniques were used in the 139 instances that failed the 90% reduction or 10 times UTS levels. However, EPA expects that not all optimization measures were used since the operators of the treatment technologies did not have as their primary objective the attainment of these particular levels, which are being adopted today as the soil treatment standard. On balance, the weight of evidence and analysis from the SDB are believed to reasonably indicate that today's standards are achievable for soils that may exhibit variability, particularly if optimization techniques or treatment technology trains are fully considered. Of course, should an unusual situation present itself in which these measures are not successful, a treatment variance can be sought under 40 CFR 268.44(h) or under the risk-based variance provisions being adopted in today's rule.

Furthermore, EPA has a number of bench and pilot studies on the treatment of contaminated soils from wood preserving, petroleum refining, and electroplating sites, which contain a wide range of constituents such as polynuclear aromatic, phenolic, chlorinated organics, spent solvents, creosote, and metals. It is reasonable to expect that these treatment results, showing achievability, also lend support to the conclusion that treatment at other RCRA and Superfund sites, containing these types of complex contaminant and soil variability scenarios, can be expected to achieve today's soil treatment standards.[28] See also Chapter 4 in Soil Treatability Analysis Report.

[28] See (1) *Remediation Case Studies: Bioremediation and Vitrification*, July 1997, EPA 542–R–97–008 or PB97–177554; (2) *Remediation Case Studies: Soil Vapor Extraction and Other In Situ Technologies*, July 1997, EPA 542–R–97–009 or NTIS PB97–177562; (3) *Analysis of Selected Enhancements for Soil Vapor Extraction*, September 1997, EPA–542–R–97–007; (4) *Remedial Case Studies: Thermal Desorption, Soil Washing, and In Situ Vitrification*, March 1995, EPA 542–R–95–005 or NTIS PB95–182945; (5) *Remediation Case Studies: Soil Vapor Extraction*, March 1995, EPA 542–4–95–004 or NTIS PB95–182937; and (6) *Remediation case Studies: Bioremediation*, March 1995, EPA 542–R–95–002 or NTIS PB95–182911.

Pooled bench, pilot, and full scale data in the SDB are expected to depict what the various treatment technologies can achieve for other hazardous soils managed under CERCLA and RCRA. As noted earlier, non-combustion technologies will behave better on a given range or class of organic and metal constituents. A given range of soil characteristics that may inhibit treatment performance can be amended to facilitate the treatment of hazardous soils. Available information on other full scale operations of the tested technologies demonstrate that optimization techniques can be used to overcome potential soil interferences and thus attain, generally, treatment design objectives. Hence, it is important to carefully evaluate the characteristics of each site against the expected capabilities of various non-combustion technologies, which are summarized below.

(3) Performance Data for Organic Constituents. EPA's conclusions with respect to achievability of soil treatment standards for organics in hazardous soils are based on the performance of biological treatment, chemical extraction, dechlorination, soil washing, thermal desorption, and soil vapor extraction. Other treatment technologies capable of achieving the treatment limits (such as combustion) are not prohibited except for those that may constitute impermissible dilution. Tables 2 and 3 below provide an overview of the number of data points and the average treatment efficiency ranges that each of the technology categories achieved. Also, each Table below reports the range of test scales as well as the available treatment performance data per major chemical family category/cluster assigned to chemical constituents in the BDAT List. (For the whole list of BDAT constituents and their classification, see Appendix B in the BDAT Background Document for Hazardous Soils, August 1993.) Further details and discussion on the results for major chemical family categories/clusters is contained in the docket.

TABLE 2.—SUMMARY OF NONTHERMAL TREATMENT PERFORMANCE DATA ON GROUPS OF ORGANIC HAZARDOUS CONSTITUENTS [29]

BDAT organic cluster	Biotreatment scale: 0.01 kg to 1,250,000 kg		Chemical extraction scale: 0.0075 kg to 37,000 kg		Dechlorination scale: 0.1 kg to 127,913 kg		Soil washing scale: 0.08–204 kg		Hydrolysis scale: 0.1 kg to 2.75 kg	
	Data points	Average removal efficiency	Data points	Average removal efficiency	Data points	Average removal efficiency	Data points	Average removal efficiency	Data points	Average removal efficiency

Dioxins and Furans	37	85.6–97.6%	None	None
Total Number of Data Points	957		236	

As shown on Tables 2 and 3, EPA lacks performance data for the thermal or non-thermal treatment of four organic constituents classified in the BDAT list as organophosphorous insecticides. These four constituents are disulfoton, famphur, methyl parathion, and phorate. However, we can determine achievability for these four organic constituents based upon the transfer of treatment data for other, similarly difficult to treat organics. Because of structural and chemical similarities, these four organophosphorous compounds are expected to behave similarly during treatment to other polar nonhalogenated phenols, phenyl ethers, and cresols. Thus, EPA believes that these four organophosphorus compounds can be treated by the same technologies as other polar nonhalogenated organic compounds, for which EPA has data. Therefore, based on the available data for polar nonhalogenated compounds, EPA concludes that the treatment standards for soils contaminated with these four organophosphorous compounds can be achieved by biodegradation, chemical extraction, and thermal desorption (semivolatiles).

(4) Other Indicia of Achievability for Organic Constituents

EPA also re-analyzed certain portions of the SDB with regard to ability of various technologies to meet today's soil treatment standards by looking more closely at organic treatability groups based on the structural features of the hazardous constituents of concern. The results of this analysis, presented in Table 4 below, corroborate those in Tables 1–3 and EPA's conclusion that the soil treatment standards—ten times UTS or 90% reduction—are within the zone of reasonable values that could have been selected. For further information on the derivation of Table 4, see the background document entitled "Derivation of Treatment Achievability Results for Organic Functional Groups and Types of Compounds."

[29] For a discussion of these treatment data, see the Soil Treatment Achievability Report: Extrapolation of Treatment Performance Data in the Soil Data Base Among Hazardous Constituents in Contaminated Soils (April 1998, USEPA); and the Additional Information on Treatability of Contaminated Soils as Discussed in Section VII.B.8. of Phase IV Final Rule Preamble, (April 1998, USEPA). These documents indicate the numbers and types of data pairs that meet the 10 times UTS level, both prior to treatment and after the treatment described in the table.

[30] Cyclical hydrocarbons with more than five rings undergo lower reduction efficiencies.

[31] EPA is transferring the available performance data from the chemical extraction and the biological treatment of (semivolatile) polar nonhalogenated organics in the hazardous solid treatment data base. Thus, the columns are intentionally left blank.

[32] Only one test was performed.

[33] For a discussion of these treatment data, see the Soil Treatment Achievability Report: Extrapolation of Treatment Performance Data in the Soil Data Base Among Hazardous Constituents in Contaminated Soils (April 1998, USEPA) and the Additional Information on Treatability of Contaminated Soils as Discussed in Section VII.B.8. of Phase IV Final Rule Preamble, (April 1998, USEPA). These documents indicate the numbers and types of data pairs that meet the 10 times UTS level, both prior to treatment and after the treatment described in the table.

[34] The term thermal desorption, as used in this table, is a general description of various thermal techniques. No conclusion may be drawn about the regulatory status or classification of a particular thermal desorber from the inclusion of treatment data from that device in this column.

[35] The performance of combustion and soil vapor extraction is less effective in treating semivolatile organics that contain aromatic and heterocyclical structures. The same is true for and nonvolatile chlorinated organics.

[36] EPA is transferring the available performance data from the chemical extraction and the biological treatment of (semivolatile) polar nonhalogenated organics in the hazardous soil treatment data base.

TABLE 4.—TREATMENT EFFICIENCY—PERCENT REDUCTION RANGES BY TECHNOLOGY FOR VARIOUS FUNCTIONAL GROUPINGS

[Average percent reduction in brackets; number of data points analyzed in parentheses] [37]

(5) Performance Data for Metal Contaminants

Performance data for metals contaminants are based on the performance of stabilization and chemical extraction (mercury) of soils contaminated with metals. Other metal treatment technologies are not prohibited (except if impermissible dilution were to occur). The results of EPA's analysis of the data on treatment of metals in soils are summarized in Table 5 below.

TABLE 5.—SUMMARY OF PERFORMANCE DATA FOR HAZARDOUS METALS CONSTITUENTS [40]

BDAT metals cluster	Stabilization scale: bench, pilot, and full scale		Chemical extraction scale: pilot		Soil washing scale: bench & pilot	
	Data Points	Average removal efficiency	Data points	Average removal efficiency	Data points	Average removal efficiency
Metals	269	91.1–99.8%	4	97.7% [41]	14	17.9–97.2%
Total	269		4		14	

The results in Table 5 corroborate EPA's conclusion that the soil treatment standards—ten times UTS or 90% reduction—are within the zone of reasonable values that could have been selected. For further information on the derivation of Table 5, see Soil Treatability Analysis Report.

With respect to multiple metal constituents or organometallic constituents in a contaminated soil, we

[37] Table based on data from "*Delivery of Graphs and Data Tables Showing Corrected Treated Concentrations vs. Data Point Number Index for Selected Constituents*," February 19, 1992 (Administrative Record of the proposed LDR Phase 2 rules as F–93–CS2P–S0597). See also (1) Derivation of Treatment Achievability Results for Organic Functional Groups and Types of Compounds, April 1998 (USEPA); (2) Additional Information on Treatability of Contaminated Soils as Discussed in Section VII.B.8. of Phase IV Final Rule Preamble, (April 1998, USEPA); (3) Extrapolation of Treatment Performance Data in the Soil Data Base Among Hazardous Constituents in Contaminated Soils (April 1998, USEPA); and (3) Soil Treatability Analysis Report (April 1998, USEPA). These documents indicate the numbers and types of data pairs that meet the 10 times UTS level, both prior to treatment and after the treatment described in the table.

[38] The term thermal desorption, as used in this table, is a general description of various thermal techniques. No conclusion may be drawn about the regulatory status or classification of a particular thermal desorber from the inclusion of treatment data from that device in this column.

[39] These include air stripping, photolysis, and treatment trains.

[40] For a discussion of these treatment data, see the Soil Treatment Achievability Report; Extrapolation of Treatment Performance Data in the Soil Data Base Among Hazardous Constituents in Contaminated Soils (April 1998, USEPA); and the Additional Information on Treatability of Contaminated Soils as Discussed in Section VII.B.8 of Phase IV Final Rule Preamble, (April 1998, USEPA). These documents indicate the numbers and types of data pairs that meet the 10 times UTS level, both prior to treatment and after the treatment described in the table.

[41] Available data are exclusively for the treatment of mercury on soils.

recognize that a situation may call for two or more treatment technology trains to achieve the treatment standards promulgated today (e.g., one treatment for organics and another for metals). This must include proper consideration of the order in which various treatment processes should be applied to the contaminated soil so that treatment effectiveness is optimized. However, if these considerations have been properly made and the required treatment standards are not being met because, for example, of unique soil matrices or difficult to treat sites, then we expect that entities may elect to seek a treatment variance pursuant to 40 CFR 268.44(h) or a risk-based soil treatment variance, which is being adopted in today's rule.

c. Data Submitted by Commenters

At least four commenters submitted treatment data from studies describing the performance of innovative and conventional treatment technologies on hazardous soils. DuPont submitted bench, pilot, and full scale treatment data from various vendors describing the operation of soil washing. DuPont asserts these data supports the viability of soil washing as an innovative technology for hazardous soils.

The Environmental Technology Council (formerly the Hazardous Waste Treatment Council) submitted full, pilot, and bench scale treatment data from various vendors of innovative treatment technologies and provided an extensive review of EPA's soil treatment data base. See document entitled, Evaluation of Proposed BDAT Soil and Process Treatment Technologies—Report to the Hazardous Waste Treatment Council, November 1993 (filed as document number CS2P00060.E in Docket No. F–92–CS2P–FFFFF). Based on the ETC's technical report and the subsequent comments of the ETC to the HWIR-Media rule (see comments from the Environmental Technology Council, filed as comment number MHWP 00088 in Docket No. F–92–CS2P–FFFFF), the ETC believes that today's treatment standards for hazardous soils are achievable using thermal treatment. Although the ETC report stated that EPA may lack full-scale treatment data for several innovative or alternative technologies, the ETC data support EPA's view that the many full scale operations of non-combustion technologies demonstrated in the field were sufficient to support a view that the soil treatment standards were achievable. Further, the ETC pointed to various examples of how various non-combustion treatment technologies can be better optimized. EPA concurs with many of those observations on how non-combustion technologies can be optimized.

Two other commenters submitted data in the Phase 2 rule regarding the performance of non-combustion technologies—USPCI and Sierra Environmental Services. USPCI's performance data describe the treatment of polynuclear organics in soils via chemical oxidation followed by stabilization. These data were determined to be insufficient to support a broad national determination that stabilization of organics can be considered BDAT for organics. However, use of organic stabilization may, in some situations, be a permissible treatment option since the LDRs do not specifically prohibit the use of stabilization or solidification to treat nonwastewaters containing hazardous organic constituents. See Response to Comment Document, Comment from Chemical Waste Management, Inc. (No. PH4P–00048). There are, however, specific circumstances in which stabilization or solidification would be considered impermissible dilution. We expect that, for these types of situations to be properly evaluated, it will be necessary to petition for a treatment variance under 40 CFR 268.44(h) or under the provisions for a risk-based soil treatment variance being adopted in today's rule. The Agency also is currently considering whether, in the near future, to issue guidance on when stabilization or solidification of organic-bearing waste is appropriate and when it may constitute impermissible dilution.

Sierra Environmental Services submitted performance data regarding the treatment of carcinogenic polyaromatic hydrocarbons (cPAH) via bioremediation. These data are based on in-situ treatment of a 7.5 acre lagoon which was divided into two cells. Although the facility remediated 35 volatile, 65 semivolatile organics, PCBs, and pesticides, the facility only submitted data describing the treatment of major PAHs. Based on the performance of the biotreatment process applied to this site, the commenter argued the proposed treatment standards, if promulgated as proposed, would eliminate biotreatment as an alternative at this facility. EPA disagrees. Remediation processes that are applied in-situ do not trigger land disposal restrictions. If the facility were biotreating the lagoon sludges ex-situ, EPA concurs that the facility may be unable to land dispose the treated lagoon sludges. We also note that, under the existing regulations and regulations being adopted today, the commenter may be able to avail itself of a treatment variance, depending on the site-specific circumstances involved.

9. Applicability of Soil Treatment Standards and Readability of Final Regulations

Many commenters asserted that the proposed regulations governing applicability of LDRs to contaminated soil were difficult to understand and apply. EPA was persuaded by these comments and has reformatted the applicability regulations into an easier-to-read table. The Agency recognizes that determining whether or not LDRs apply to any given volume of contaminated soil can be complicated. To further assist program implementors and facility owners/operators, we will review and discuss the principles that govern LDR applicability for contaminated soil in this section of today's preamble.

The following principles informed EPA's decisions concerning application of LDRs to contaminated soils.

First principle: land disposal restrictions only attach to prohibited hazardous waste (or hazardous contaminated soil) when it is (1) generated and (2) placed in a land disposal unit.[42] Therefore, if contaminated soil is not removed from the land (i.e., generated), LDRs cannot apply. Similarly, if contaminated soil is removed from the land (i.e., generated) yet never placed in a land disposal unit, LDRs cannot apply.[43] In other words, LDRs do not apply to contaminated soil *in situ* or force excavation of contaminated soil. If soils are excavated, however, LDRs may apply, as discussed below.

Second principle: once a decision has been made to generate and re-land-dispose contaminated soils, LDRs generally only apply to contaminated soils that contain hazardous waste. The Agency considers soil to contain hazardous waste: (1) when it exhibits a

[42] As discussed earlier in today's final rule, all hazardous wastes that were listed or identified at the time of the 1984 Hazardous and Solid Waste Amendments to RCRA have been prohibited from land disposal. EPA is required to prohibit hazardous wastes listed or identified after 1984 within six months of the wastes' listing or identification. RCRA Section 3004(g)(4). A table in 40 CFR Part 268 Appendix VII. outlines the dates of LDR applicablity for hazardous wastes.

[43] Note that, as discussed later in today's preamble, nothing in today's final rule affects implementation of the existing "area of contamination" policy. Therefore, soil managed within areas of contamination, even if it is "removed from the land" within such an area, would not be considered to be "generated." See the discussion of the area of contamination policy later in today's preamble.

characteristic of hazardous waste; and, (2) when it is contaminated by certain concentrations of constituents from listed hazardous waste. The contained-in policy is discussed in Section VII.E of today's preamble.

Third principle: once LDRs attach (generally, at the point of generation, see principle (1)) to any given hazardous waste or volume of hazardous contaminated soil, the LDR treatment standards continue to apply until they are met. This principle comes from application of the logic of the Chemical Waste opinion. In that opinion, the D.C. Circuit held that land disposal prohibitions attach at the point that a hazardous waste is generated and continue to apply until threats posed by land disposal of the waste are minimized. Chemical Waste Management v. EPA, 976 F.2d at 13, 14 and 24. In illustration of this principle, the court held that (in the case of characteristic hazardous waste) elimination of the property that caused EPA to identify a waste as hazardous in the first instance does not automatically eliminate the duty to achieve compliance with LDRs. As discussed later in this section of today's preamble, EPA has determined that, although the Chemical Waste opinion did not address contaminated soils *per se*, it is prudent to apply the logic of the Chemical Waste opinion to contaminated soils.

Using these principles, EPA created the regulations and table that govern application of LDRs to contaminated soils, as discussed below.

The regulations that address application of LDRs to soil that exhibits a characteristic of hazardous waste are relatively straightforward. Soil that exhibits a characteristic of hazardous waste when it is generated is subject to LDRs and must be treated to meet LDR treatment standards prior to land disposal. EPA's conclusion that soil that exhibits a characteristic of hazardous waste must be treated to meet LDRs prior to land disposal derives from a simple application of the principles above. First, LDRs have the opportunity to attach to contaminated soil at the point of generation (principle (1)) and, second, under the contained-in policy, soil that exhibits a characteristic of hazardous waste must be managed as hazardous waste (principle (2)) and, therefore, must comply with LDRs. Note that, once LDRs have attached to soil that exhibits a characteristic of hazardous waste, LDR treatment standards must be met prior to land disposal of the soil, even if the characteristic is subsequently eliminated (principle (3)).

The remainder of today's regulations on application of LDRs to contaminated soil, which are in table form, apply to soil contaminated with listed hazardous wastes. The table lists four scenarios.

In the first scenario, soil is contaminated with untreated listed hazardous waste that was prohibited from land disposal when first land disposed (e.g., prohibited hazardous waste that was illegally placed or prohibited hazardous waste that was spilled). In this case, LDRs have already attached to the hazardous waste. Therefore, since LDRs have attached to the waste and threats have not yet been minimized (i.e., treatment standards have not been met), under principle (3) LDRs continue to apply to the waste and, automatically, to any contaminated soil.[44] The Agency has concluded that LDRs apply to soils contaminated in this way regardless of whether the soil is determined not to (or no longer to) "contain" hazardous waste either when first generated or at any time in the future. This conclusion comes from application of principle (3): once something is prohibited from land disposal, LDRs continue to apply until threats to human health and the environment posed by land disposal are minimized regardless of whether the material is at some point determined no longer to be "hazardous."

In the next two scenarios, soil is contaminated with hazardous wastes that were not prohibited from land disposal when first land disposed, but, sometime after land disposal, LDRs have gone into effect. In these cases, whether or not LDRs apply to contaminated soil is governed by a determination of whether or not any given volume of contaminated soil "contains" hazardous waste at its point of generation. If any given volume of soil is determined to contain hazardous waste at its point of generation, LDRs attach (principles (1) and (2)) and, therefore, the LDR treatment standards must be met prior to placement of such soil in a land disposal unit (principle (3)). If any given volume of soil is determined not to contain hazardous waste at its point of generation, there is no hazardous waste to which a land disposal prohibition could attach and the soil, thus, would not be prohibited from land disposal (principles (1) and (2)). (It would be the same if a hazardous waste land disposed before the effective date of an applicable land disposal prohibition were delisted when first re-generated. In that case too, there would be no hazardous waste to which a land disposal prohibition could attach and the delisted waste, thus, would not be prohibited from land disposal.) Note that, under principle (3), once LDRs attach to contaminated soil, the treatment standards must be met prior to land disposal even if the soil is, subsequently, determined no longer to contain hazardous waste.

The final scenario requires no elaboration; it simply makes clear that if soil is contaminated by hazardous waste that was never prohibited from land disposal, LDRs do not apply. This is through application, primarily, of principle (2)—LDRs attach only to hazardous wastes or soil that contains hazardous waste.

Note that, because LDRs apply to the waste "contained-in" soil, and not the soil itself (see principle (2)), LDRs do not apply to soil that is at any time completely separated from its contaminating waste (i.e., the soil contains no solid or hazardous waste, it's "just soil"). One might determine that soil contained no solid or hazardous waste, for example, if concentrations of hazardous constituents fall below natural background levels or are at non-detectable levels. Such a determination would terminate all RCRA Subtitle C requirements, including LDRs, since waste would not longer be "contained-in" the soil. See September 15, 1996 letter from Michael Shapiro (EPA) to Peter Wright (Monsanto Company), making this finding; see also, 61 FR 18806 (April 29, 1996) and other sources cited therein.

The following examples illustrate application of LDRs to contaminated soil:

1. Generator A is excavating soil mildly contaminated with wastewater treatment sludge (listed waste F006). The sludge was land disposed before 1980. The soil does not exhibit a characteristic of hazardous waste and has been determined by an authorized state not to contain listed hazardous waste. The soil is not prohibited from land disposal. This is because, for LDR purposes, the point of generation is when the soil is first excavated from the land (principle (1)). Since no prohibited hazardous waste existed before that time (i.e., the contaminating waste was not prohibited) and the soil does not contain listed hazardous waste or exhibit a characteristic of hazardous waste at its point of generation, there is

[44] EPA is assuming that the waste did not meet a treatment standard when it was placed on the soil. Wastes which meet a treatment standard are no longer prohibited from land disposal and, unless it is determined to "contain" hazardous waste at its point of generation and are subsequently land disposed, soils contaminated by these wastes are, likewise, not prohibited from land disposal. See, RCA section 3004(m)(2) (hazardous wastes meeting treatment standards are no longer prohibited from land disposal).

no hazardous waste to which a land disposal prohibition could attach (principle (2)).

2. Generator B is excavating soil contaminated by leaks from a closing hazardous waste surface impoundment. The surface impoundment received listed hazardous wastes K062 (spent pickle liquor) and characteristic hazardous waste D018 (wastes that fail the TCLP test for benzene). The surface impoundment stopped receiving K062 waste in 1987 and D018 waste in 1993. The soil does not exhibit a characteristic of hazardous waste and has been determined by an authorized state not to contain listed hazardous waste. The soil is not prohibited from land disposal. This is because, for LDR purposes, the point of generation is when the soil is first excavated from the land (principle (1)). Since no prohibited hazardous waste existed before that time (i.e., the contaminating wastes were not prohibited) and the soil does not contain listed hazardous waste or exhibit a characteristic of hazardous waste at its point of generation, there is no hazardous waste to which a land disposal prohibition could attach (principle (2)).

3. Generator C is excavating soil contaminated with listed hazardous waste F024. The F024 waste was land disposed after 1991, after it was prohibited from land disposal, and was not first treated to meet applicable land disposal treatment standards (i.e., it was illegally land disposed or accidentally spilled). Since the contaminating waste was prohibited from land disposal and treatment standards were not achieved prior to land disposal, the LDR prohibition continues to apply to any soil contaminated by the waste (principle (3)) regardless of whether the soil "contains" hazardous waste when generated. The soil is prohibited from land disposal and, before land disposal, must be treated to meet applicable technology-based treatment standards or until a site-specific, risk-based minimize threat determination is made through the variance process.

4. Generator D is excavating soil contaminated by an accidental spill of benzyl chloride, which, when discarded, is listed hazardous waste P028 and is prohibited from land disposal. The accidental spill occurred yesterday. The contaminating waste was prohibited from land disposal and, since the treatment standards were not achieved prior to the accidental spill, the prohibition continues to apply to any soil contaminated by the waste (principle (3)). Thus, the soil is prohibited from land disposal and, before land disposal, must be treated to meet applicable technology-based treatment standards or until a site-specific, risk-based minimize threat determination is made through the variance process.

5. Generator E is excavating soil contaminated by listed hazardous waste F004 (generally, spent non-halogenated solvents). The F004 waste was land disposed in 1984, prior to the effective date of an applicable land disposal prohibition; however, on generation the soil contains high concentrations of cresols constituents, so that an authorized state determines it "contains" hazardous waste. The soil is prohibited from land disposal. Although the contaminating waste was not prohibited from land disposal, since the soil contained hazardous waste at the point of generation (and the waste had since become prohibited from land disposal), the land disposal prohibition attaches to the contaminated soil and, before land disposal, the soil must be treated to meet applicable technology-based treatment standards or until a site-specific, risk-based minimize threat determination is made through the variance process (principles (1), (2), and (3)).

EPA acknowledges that the reading of LDR applicability to contaminated soil discussed above creates potential administrative difficulties, since, in many cases, a factual determination will be required as to when hazardous wastes were land disposed in order to determine whether they were prohibited at that time and whether, therefore, the prohibition continues to apply to contaminated soil. The Agency expects that these difficulties will be minimal because, in most cases, contamination will be caused by hazardous wastes placed before the effective date of applicable land disposal prohibitions since land disposal after prohibition would be illegal. The exception is accidental spills of hazardous waste, which the Agency believes are (1) rare, and (2) known, so determining dates of land disposal should not be problematic. This issue was discussed in detail in the HWIR-Media proposal. 61 FR 18805 (April 26, 1996).

As discussed in the April 29, 1996 proposal, the Agency continues to believe that, if information is not available or inconclusive, it is generally reasonable to assume that contaminated soils do not contain untreated hazardous wastes placed after the effective dates of applicable land disposal prohibitions. This is because placement of untreated hazardous waste after applicable LDR effective dates would be a violation of RCRA, subject to significant fines and penalties including criminal sanctions. 61 FR at 18805 (April 29, 1996). Of course, program implementors and facility owners/operators cannot make the determination that information on the types of waste contamination or dates of waste placement is unavailable or inconclusive without first making a good faith effort to uncover such information. By using available site- and waste-specific information such as manifests, LDR records required under 40 CFR 268.7, vouchers, bills of lading, sales and inventory records, storage records, sampling and analysis reports, accident reports, site investigation reports, spill reports, inspection reports and logs, EPA believes that program implementors and facility owners/operators will typically be able to make informed decisions about the types of waste contamination and dates of waste placement. Most commenters supported this approach.

EPA notes that it is not critical for a decision about whether contaminated soil contains listed hazardous waste or exhibits a characteristic of hazardous waste to be made without removing any of the soil (other than the sample volume) from the land. In an area of generally dispersed soil contamination, soil may be consolidated or managed within the area of contamination to facilitate sampling, for example, to ensure that soil samples are representative or to separate soil from non-soil materials. However, care should be taken not to remove hazardous contaminated soils from separate areas of contamination at a facility and place such hazardous contaminated soil into a land disposal unit unless, of course, the soil meets applicable LDR treatment standards. The area of contamination policy is discussed later in this section of today's preamble.

A few commenters expressed concern or confusion over the application of LDRs to soil contaminated by accidental spills of hazardous wastes. The Agency clarifies that accidental spills of hazardous wastes (or products or raw materials) are not considered placement of hazardous waste into a land disposal unit since, in the case of a spill, prohibited waste is not being placed in one of the identified units named in RCRA Section 3004(m).[45] See, 45 FR 76626 (Nov. 19, 1980), issuing clarifying regulations at 40 CFR 264.10(g) to provide that hazardous waste treatment

[45] Although, if such a spill were not cleaned up in a timely way, EPA or an authorized state could determine that the contaminated area should be considered a land disposal unit for purposes of requiring cleanup under RCRA Subtitle C. 55 FR at 20809 (July 27, 1990).

and storage activities undertaken in immediate response to an accidental spill are exempt from the 40 CFR Part 264 and 265 regulations governing treatment and storage and do not require permits and Sept. 29, 1986 memo from J. Winston Porter (EPA Assistant Administrator) to Fred Hansen interpreting the 40 CFR 264.10(g) regulations; also see, 55 FR at 30808–30809 (July 27, 1990) ("a one-time spill of hazardous waste would not be considered a solid waste management unit.") However, contaminated soils generated through remediation of spills of untreated listed prohibited hazardous wastes are, as discussed above, subject to land disposal prohibitions since the LDR prohibition that had attached to the contaminating hazardous waste continues to apply until threats are minimized, and, therefore, any contaminated soil remains subject to LDRs (see principle (3)).

A number of commenters expressed concern that EPA's interpretation of LDR applicability to contaminated soil might preclude application of the existing area of contamination policy. In the area of contamination policy, EPA interprets RCRA to allow certain discrete areas of generally dispersed contamination to be considered a RCRA unit (usually a landfill). 55 FR 8758–8760 (March 8, 1999). This interpretation allows hazardous wastes (and hazardous contaminated soils) to be consolidated, treated *in situ* or left in place within an area of contamination without triggering the RCRA land disposal restrictions or minimum technology requirements—since such activities would not involve "placement into a land disposal unit," which is the statutory trigger for LDR. EPA clarifies that its interpretation of LDR applicability for contaminated soil does not, in any way, affect implementation of the area of contamination policy.

Finally, many commenters expressed concern over EPA's application of the LDR treatment standards to soil that is determined no longer to contain hazardous waste or exhibit a characteristic of hazardous waste. As discussed in detail in the 1996 proposal, at this time EPA has concluded that although the Chemical Waste opinion did not speak to contaminated soil specifically, it is prudent to apply the Chemical Waste logic—that a duty to comply with LDRs attaches to hazardous waste when it is first generated and elimination of the indicia of "hazardousness" does not, necessarily, fulfil the statutory land disposal restriction treatment standard—to contaminated soil. See Chemical Waste Management v. EPA, 976 F.2d at 13–16. Although, as discussed later in today's preamble, EPA believes that contained-in determinations will rarely, if ever, be made at constituent concentrations which do not minimize threats, without codifying the contained-in policy, the Agency cannot make the generic finding that this will be the case at every site. For this reason, EPA is requiring that the standards and procedures promulgated today for site-specific, risk-based minimize threat variances alone be used to make minimize threat determinations. This issue is discussed in section VII.E of today's preamble.

C. Conforming and Supporting Changes

To support the land disposal restriction treatment standards for contaminated soil, the Agency is today promulgating a number of conforming and supporting regulations, as follows.

1. Recordkeeping Requirements

A number of commenters expressed confusion over the recordkeeping and reporting requirements that would apply to contaminated soil. The Agency is today clarifying that contaminated soil subject to the land disposal restrictions must comply with the same recordkeeping and reporting requirements as other wastes subject to the land disposal restrictions. That is, the recordkeeping and reporting requirements of 40 CFR 268.7 will apply.

EPA has clarified this in the final regulations by adding appropriate recordkeeping requirements for contaminated soils to the tables in 40 CFR 268.7(a) and 40 CFR 268.7(b). These rules specify that, for contaminated soil, generators and/or treaters must include the following information with their land disposal restriction paperwork: the constituents subject to treatment as described in 40 CFR 268.49(d) and this statement, "this contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and [is subject to/complies with] the soil treatment standards as provided by 268.49(c) or the universal treatment standards." Note that because in some cases contaminated soil will continue to be subject to LDRs even after it has been determined not to or no longer to contain listed hazardous waste (or de-characterized), the statement includes a notification of whether the soil is still considered hazardous. This is consistent with the approach the Agency used when establishing land disposal restriction treatment standards for hazardous contaminated debris.

2. Definition of Soil

The Agency is promulgating the definition of soil from the April 29, 1996 proposal with one change made in response to comments. Soil is defined as, "unconsolidated earth material composing the superficial geologic strata (material overlying bedrock), consisting of clay, silt, sand, or gravel size particles as classified by the U.S. Soil Conservation Service, or a mixture of such materials with liquids, sludges or solids which is inseparable by simple mechanical removal processes and is made up primarily of soil by volume, based on visual inspection." The Agency has added the phrase "by volume, based on visual inspection" in response to comments recommending that EPA explicitly conform the definition of soil with the definition of debris. See 57 FR 37222 (August 18, 1992). This clarification is consistent with the Agency's intent, as discussed in the 1996 proposal, that determinations of whether any material was "soil," "debris," or "waste" to be made in the field. 61 FR 18794 (April 26, 1996).

The definition of soil includes the concept that mixtures of soil and other materials are to be considered soil provided the mixture is made up predominantly of soil and that the other materials are inseparable using simple physical or mechanical means. This approach allows program implementors and facility owners/operators to determine whether any given material is soil, waste, or debris based on the results of simple mechanical removal processes commonly used to separate materials, such as pumping, dredging, or excavation by backhoe, forklift or other device. It avoids requiring chemical analysis for soil properties in order to differentiate precisely between wastes, soil and debris. As discussed in the April 29, 1996 and September 14, 1993 proposals, the Agency believes that attempting to distinguish more precisely between waste, soil or debris using chemical analysis or other tests would be prohibitively difficult to develop and support and cumbersome to administer. *Cf.* 57 FR at 37224, August 18, 1992, where the Agency adopted a similar classification system for hazardous debris. Most commenters supported this approach. Note that any non-soil that is separated from contaminated soil that contains listed hazardous waste or is found to exhibit a characteristic of hazardous waste should be considered hazardous waste and is subject to the applicable universal treatment standard.

EPA also emphasizes that any dilution of a prohibited contaminated soil (or of a prohibited hazardous waste with soil) as a substitute for adequate treatment to achieve compliance with LDR treatment standards or to circumvent the effective date of an LDR prohibition is considered a type of impermissible dilution and is illegal. Therefore, any deliberate mixing of prohibited hazardous waste with soil in order to change its treatment classification (i.e., from waste to contaminated soil) is illegal. Existing regulations concerning impermissible dilution already make this point. See 40 CFR 268.3(a) and (b); see also 57 FR at 37243 (Aug. 18, 1992) (adopting the same principle for contaminated debris). The Agency expects that deliberate mixing of hazardous waste with soil (and vice versa) will be rare because such actions are clearly illegal and would subject generators to substantial fines and penalties, including criminal sanctions. In addition, the resulting mixture (hazardous waste impermissible diluted by soil) would continue to be subject to the LDRs for the original hazardous waste (i.e., generally, the universal treatment standards), so no benefit in terms of reduced treatment requirements would occur. The Agency took a similar approach when promulgating treatment standards specific to hazardous debris. See 57 FR at 37224 (August 18, 1992).

The Agency notes that the normal mixing of contaminated soil from various portions of a site that typically occurs during the course of remedial activities or in the course of normal earthmoving and grading activities is not considered intentional mixing of soil with non-media or prohibited soil with non-prohibited soil and, therefore, is not a type of impermissible dilution.

D. Seeking Treatment Variances Because the National Treatment Standard is Unachievable or Inappropriate

Under existing regulations at 40 CFR 268.44, people may obtain a variance from a land disposal restriction treatment standard when a waste cannot be treated to the specified level or when a treatment standard may be inappropriate for the waste. With respect to contaminated soils, EPA has to this point presumed that a treatment variance would generally be needed because the LDR treatment standards developed for process wastes were either unachievable (generally applied to soil contaminated by metals) or inappropriate (generally applied to soil contaminated by organic constituents). See, for example, 55 FR 8760 (March 8, 1990); 58 FR 48092, 48125 (September 14, 1993); 61 FR 18805–18808, 18810–18812 (April 29, 1996); and, 61 FR 55717 (October 28, 1996). This presumption will no longer apply once today's soil treatment standards take effect. This is because today's standards were developed specifically for contaminated soils and are intended to specifically address the past difficulties associated with applying the treatment standards developed for process waste to contaminated soil.

This is not to say that treatment variances based on the "unachievable" or "inappropriate" prongs of the test are now unavailable for contaminated soils. For example, in some cases it may prove that even though an appropriate technology, suited to the soil matrix and constituents of concern was used, a particular soil cannot be treated to meet the soil treatment standards using a well-designed well-operated application of one of the technologies EPA considered in establishing the soil standards. In these types of cases, under existing regulations, the soil treatment standard would be considered "unachievable" and a treatment variance could be approved. In other cases, under existing regulations, application of the soil treatment standards might be "inappropriate" in that, for example, it would present unacceptable risks to on-site workers.

As noted earlier in today's preamble, alternative LDR treatment standards established through treatment variances must, according to 40 CFR 268.44(m), "minimize threats to human health and the environment posed by land disposal of the waste." In cases where an alternative treatment standard does not meet this requirement, a treatment variance will not be approved even though application of a technology more aggressive than the technologies on which the soil treatment standards are based might then be necessary. For example, in cases where the soil treatment standards cannot be achieved through application of a well-designed, well-operated application of one of the model soil treatment technologies and application of the model technology or other non-combustion technologies will not result in constituent concentrations that minimize threats, a variance would not be approved and combustion would be necessary. This is proper given that the soil treatment standards were not developed using the methodology typically used in the land disposal restriction program (i.e., application of the most aggressive treatment technology to the most difficult to treat waste), but, instead are designed to accommodate a variety of soil treatment technologies that are typically used during remediation. Variances for treatment of contaminated soil will be applied during the remedial context, where, as discussed in Section VII.B.3 of today's preamble, EPA and authorized states will typically have detailed information about the risks posed by specific hazardous constituents, direct and indirect exposure routes, risk pathways and human and environmental receptors. This information can be used to inform decisions about whether threats are minimized.

E. The Contained-In Policy

The contained-in principle is the basis for EPA's longstanding interpretation regarding application of RCRA Subtitle C requirements to mixtures of contaminated media and hazardous wastes. Under the "contained-in" policy, EPA requires that soil (and other environmental media), although not wastes themselves, be managed as if they were hazardous waste if they contain hazardous waste or exhibit a characteristic of hazardous waste. See, for example, 53 FR 31138, 31148 (August 17, 1988) and 57 FR 21450, 21453 (May 20, 1992) (inadvertently citing 40 CFR 261(c)(2) instead of 40 CFR 261.3(d)(2)); see also Chemical Waste Management v. EPA, 869 F.2d 1526, 1539–40 (D.C. Cir. 1989) (upholding the contained-in principle as a reasonable interpretation of EPA regulations). In practice, EPA has applied the contained-in principle to refer to a process where a site-specific determination is made that concentrations of hazardous constituents in any given volume of environmental media are low enough to determine that the media does not "contain" hazardous waste. Typically, these so called "contained-in" determinations do not mean that no hazardous constituents are present in environmental media but simply that the concentrations of hazardous constituents present do not warrant management of the media as hazardous waste.[46] For contaminated soil, the result of "contained-in determinations" is that soil no longer "contains" a

[46] Of course, as noted earlier, EPA or an authorized state could determine, at any time, that any given volume of environmental media did not contain (or no longer contained) any solid or hazardous waste (i.e., it's just media). These types of determinations might be made, for example, if concentrations of hazardous constituents fall below background levels, or are at non-detectable levels. Such a determination would terminate all RCRA Subtitle C requirements, including LDRs. See, September 15, 1995 letter from Michael Shapiro (EPA) to Peter Wright (Monsanto Company), making this finding, and 61 FR 18806 (April 29, 1996).

hazardous waste; however, as discussed above, the result is not automatically that soil no longer must comply with LDRs.

In order to preserve flexibility and because EPA believes legislative action is needed, the Agency has chosen, at this time, not to go forward with the portions of the September 14, 1993 or April 29, 1996 proposals that would have codified the contained-in policy for contaminated soils. The Agency continues to believe that legislation is needed to address application of certain RCRA subtitle C requirements to hazardous remediation waste, including contaminated soil. If legislation is not forthcoming, the Agency may, in the future, re-examine its position on the relationship of the contained-in policy to site-specific minimize threat determinations based on implementation experience and/or may choose to codify the contained-in policy for contaminated soil in a manner similar to that used to codify the contained-in policy for contaminated debris.

1. Current Guidance on Implementation of the Contained-in Policy

EPA has not, to date, issued definitive guidance to establish the concentrations at which contained-in determinations may be made. As noted above, decisions that media do not or no longer contain hazardous waste are typically made on a case-by-case basis considering the risks posed by the contaminated media. The Agency has advised that contained-in determinations be made using conservative, health-based levels derived assuming direct exposure pathways. 61 FR at 18795 (April 29, 1996) and other sources cited therein. A compilation of many of the Agency's statements on the contained-in policy has been placed in the docket for today's rulemaking.

The land disposal restriction treatment standards for contaminated soil promulgated today do not affect implementation of the contained-in policy. They are not considered, and should not be used, as de facto "contained-out" concentrations although, in some cases, it may be appropriate to determine that soil treated to the soil treatment standards no longer contains hazardous waste. Remediation project managers should continue to make contained-in decisions based on site-specific conditions and by considering the risks posed by any given contaminated media.

2. Relationship of the Contained-In Policy to Site-Specific, Risk-Based Minimize Threat Determinations

As discussed above, the D.C. Circuit held in the Chemical Waste opinion that the RCRA Section 3004(m) obligation to minimize threats can continue even after a waste would no longer be identified as "hazardous." Chemical Waste Management v. EPA, 976 F.2d at 13–16. The Agency believes that it is prudent to apply the logic of the Chemical Waste opinion to contaminated soil. Therefore, when the contained-in policy is applied to soil that is already subject to a land disposal prohibition, the Agency is compelled to decide if a determination that soil does not or no longer "contains" hazardous waste is sufficient to determine that threats posed by subsequent land disposal of those soils have been minimized. As discussed earlier in today's preamble, EPA is not, at this time, able to make a generic finding that all contained-in determinations will automatically satisfy this standard. This is largely because, for reasons of needed administrative flexibility and because we believe legislation is needed, EPA has not codified standards for approving contained-in determinations and has not codified procedures for making such determinations. Absent such standards and procedures, the Agency cannot, at this time, make a generic finding that all contained-in determinations will result in constituent concentrations that also minimize threats within the meaning of RCRA Section 3004(m). These decisions, of course, could be made on a site-specific basis, by applying the standards and procedures for site-specific, risk-based minimize threat variances, promulgated today.

The regulations governing site-specific, risk-based minimize threat determinations promulgated today are, essentially, the same as the Agency's guidance for making contained-in determinations. See, for example, 61 FR 18795 (April 29, 1996) and other sources cited therein. That is, decisions should be made by considering the inherent risks posed by any given soil, assuming direct exposure (i.e., no post-land disposal controls) and applying conservative information to calculate risk. Therefore, the Agency expects that, in most cases, a determination that soils do not (or no longer) contain hazardous waste will equate with minimize threat levels and, therefore, encourages program implementors to combine contained-in determinations, as appropriate, with site-specific, risk-based minimize threat variances.

F. Relationship of Soil Treatment Standards to the Final HWIR-Media Rule

In the April 29, 1996 HWIR-Media proposal, EPA proposed to establish a comprehensive alternative management regime for hazardous contaminated media, of which the treatment standards for contaminated soil would have been a small part. The HWIR-Media proposal discussed a number of options for comprehensive management standards for hazardous contaminated media.

Today's action resolves and finalizes the portion of the HWIR-Media proposal that addressed land disposal restriction treatment standards for contaminated soil. See 61 FR 18805–18814, April 29, 1996. Other portions of the proposal are not resolved by this action and will be addressed by EPA in future actions. EPA continues to emphasize that, while the soil-specific LDR treatment standards will improve contaminated soil management and expedite cleanups, the Agency also recognizes that additional reform is needed, especially for management of non-media remediation wastes like remedial sludges. The Agency will continue to participate in discussions on potential legislation to promote this additional needed reform.

VIII. Improvements and Corrections to LDR Regulations

Summary: The regulated community has pointed out several examples of the LDR regulations that were unclear or had typographical errors. These sections are clarified and corrected below.

A. Typographical Error in Section 261.1(c)(10)

A typographical error was found in the cross reference in the note in § 261.1(c)(10). The first Phase IV final rule ("Minirule," 62 FR 25998) said "They are covered under the exclusion from the definition of solid waste for shredded circuit boards being recycled (261.4(a)(13))." The correct cross reference is to "(261.4(a)(14)." This typographical error is corrected in this final rule.

B. Typographical Error in Section 268.4(a)(2)(ii) and (a)(2)(iii)

These paragraphs have referred to § 268.8 for some time. Section 268.8 was where the so called "soft hammer" provisions were once found in the regulations. These provisions expired in 1990, and the provisions have been removed from the regulations; thus there is no need to continue to include references to § 268.8.

C. Clarifying Language Added to Section 268.7

The first item in the paperwork tables requires that the EPA Hazardous Waste and Manifest numbers be placed on the notification forms. Today's changes clarify that the manifest number required to be placed on the notification form is that of the first shipment of waste to the treatment or disposal facility.

The tables of paperwork requirements found at § 268.7(a)(4) and (b)(3) have entries that describe what waste constituents have to be identified on the one-time LDR notification (see item 3 in the generator table at § 268.7(a)(4), and item 2 in the treatment and storage facility table at § 268.7(b)(3)). The language of these items has been changed to avoid confusion about whether wastes managed at facilities subject to the Clean Water Act (CWA), CWA-equivalent facilities, or wastes injected into deepwells subject to the Safe Drinking Water Act (SDWA) are subject to a paperwork requirement (and if so, what requirements). Wastes managed in these facilities are subject to a one-time notification requirement. This notification must be placed in the facility's on site files and must contain the information described in the paperwork tables. Therefore, the parenthetical language that appeared to exclude such facilities from the paperwork requirements has been removed from item 2 in the "Generator" table, and item 3 in the "Treatment Facility" table.

In addition, these items have been further clarified by adding the language "in characteristic wastes" after the clause "and underlying hazardous constituents," to indicate exactly what type of wastes must be considered when determining whether underlying hazardous constituents are present. The title of the paperwork table at § 268.7(b)(3) has been changed to clarify that the requirements apply to storage facilities as well as treatment facilities. A number of certifications were inadvertantly removed from § 268.7(b) through Office of Federal Register drafting errors. Those certifications are reinstated because it was never the intention of the Agency that they were removed.

D. Correction to Section 268.40—Treatment Standards for Hazardous Waste

In the Phase III Final Rule (61 FR 15566), the Agency promulgated a UTS of 12.0 mg/L for 1,4-dioxane wastewaters based on the performance of distillation. At that time, 1,4-dioxane was the only UTS constituent for which EPA had promulgated a nonwastewater standard but not a wastewater standard. However, as part of that rule, the Agency failed to extend the treatment standard to wastewater forms of U108 wastes. Today, the Agency is correcting this oversight in Section 268.40—Treatment Standards for Hazardous Wastes, by replacing the "NA" designation under AU108 -1,4-Dioxane wastewaters@ with "12.0 mg/L." As such the 1,4-Dioxane alternate treatment standard now applies to both wastewater and nonwastewaters forms of U108 waste.

E. Removal of California List Requirements and de minimis Provision From Section 268.42

In the Phase IV rule promulgated on May 12, 1997, EPA removed the California List requirements because they have all been superseded by more specific treatment standards. The California List included liquid wastes containing certain metals, cyanide, polychlorinated biphenyls (PCBs) above specified levels, and liquid and nonliquid halogenated organic compounds (HOCs) above specified levels. These wastes were removed from the Table of Treatment Standards in § 268.40; however, the requirements in § 268.42(a)(1) and (a)(2) were overlooked. These paragraphs are removed by today's rule. And because these paragraphs are being removed, it is necessary to revise the language of § 268.42(a) to remove references to these paragraphs.

The de minimis provision of paragraph § 268.42(a)(3) is also being removed by today's rule. The de minimis provision applied to wastewaters regulated under the Clean Water Act (CWA) mixed with high total organic carbon (TOC) ignitable wastes. In the Phase III final rule, however, wastes discharged under the CWA, or in a facility that is CWA-equivalent, are not subject to the LDRs (61 FR 15660, April 8, 1996). Therefore the *de minimis* provision was redundant and has been removed by today's rule.

F. Typographical Errors and Outdated Cross-References in Section 268.45

There is a typographical error in § 268.45(a). The language has referred to § 261.3(c)(2), a section removed from the regulations on September 30, 1992 (57 FR 49278). It should refer to § 261.3(f)(2). The correction is being made in this final rule.

In paragraphs (3) and (4) in § 268.45(d) there are outdated cross-references to treatment standards that were once found at § 268.42 and § 268.43 (the treatment standards once found in these sections have been consolidated into the "Table of Treatment Standards" at § 268.40). These cross references have been removed from § 268.45(d)(3) and (d)(4).

G. Correction to § 268.48 to Explain That Sulfides are not Regulated as Underlying Hazardous Constituents in Characteristic Wastes

In response to a comment received on the original Phase IV proposal, EPA reviewed the basis for the universal treatment standard for sulfides in the Universal Treatment Standard Table at 40 CFR 268.48. EPA is correcting the table in this rule. Sulfides are regulated only in Waste Code F039 (multi-source leachate), and not as underlying hazardous constituents in characteristic wastes.

H. Cross References in Section 268.50(e)

Erroneous references appeared in this section to §§ 268.41, 268.42, 268.43, and 268.32. They are eliminated in this final rule.

I. Mistakes in Appendices VII and VIII

Table 1 includes entries for F033. There is no hazardous waste with the EPA waste code F033. Therefore, these entries are being removed. The second entry for waste codes F032, the second entry for F034, and the first entry for K088 contained typographical errors that are being revised in today's final rule. In addition, two entries for waste code F035 are being added to the table. Table 2 is amended by revising entry number 9 to change the prohibition date for soil and debris contaminated with K088 wastes.

The title of appendix VIII is revised to clarify that it provides the effective dates for wastes injected into deep wells.

J. Clarification Regarding Point of Generation of Boiler Cleanout Rinses

In the May 12, 1997 final Phase IV rule, EPA included in the preamble an interpretive discussion regarding at what point the Agency considers a waste to be generated when power plant boilers are cleaned out using multiple rinses. 62 FR at 26006. The question is relevant to the issue of whether subtitle C rules apply to such waste, and also, if the waste is to be land disposed, whether LDR prohibitions apply. In essence, the interpretation is that the cleanout of the boiler is to be viewed as a single process, so that if the boiler cleanout liquids are commingled in a single tank system, the hazardousness of the resulting cleanout liquids is to be determined at the end of the cleaning process. *Id.*

Some confusion has arisen regarding whether this interpretation applies to permanent storage tanks, or only to temporary tanks brought on-site to manage the boiler cleanout rinses. The Agency's view is that the interpretation applies to temporary tanks, and also to permanent tanks when such units are used exclusively for the management of boiler cleanout during the boiler cleanout process. (Such tanks could, of course, be engaged in other activities when they are not dedicated to management of boiler cleanout waste during the cleanout process.)

EPA did state in the May 12 notice that "[t]he interpretation * * * does not apply where there are permanent storage units involved." 62 FR at 26007. What the Agency had in mind was a tank already engaged in the permanent storage of hazardous waste. However, so long as a tank is dedicated solely to storage of boiler cleanout rinses during the boiler cleanout process, there is no environmental distinction between whether or not a temporary or permanent tank is used for the purpose. Consequently, the point of generation interpretive principle announced in the May 12 notice applies to both permanent and temporary tanks systems.

IX. Capacity Determination for Phase IV Land Disposal Restrictions

A. Introduction

This section summarizes the results of the capacity analysis for the wastes covered by today's rule. For a detailed discussion of capacity analysis-related data sources, methodology, and response to comments for each group of wastes covered in this rule, see the background document for the capacity analysis and the background document for the comment summary and response for capacity-related issues (i.e., collectively referred to as the Capacity Background Documents).

In general, EPA's capacity analysis focuses on the amount of waste to be restricted from land disposal that is currently managed in land-based units and that will require alternative treatment as a result of the LDRs. The quantity of wastes that are not managed in land-based units (e.g., wastewater managed only in RCRA exempt tanks, with direct discharge to a Publicly Owned Treatment Works (POTW)) is not included in the quantities requiring alternative treatment as a result of the LDRs. Also, wastes that do not require alternative treatment (e.g., those that are currently treated using an appropriate treatment technology) are not included in these quantity estimates.

EPA's decisions on when to establish the effective date of the treatment standards (e.g., by granting a national capacity variance) are based on the availability of alternative treatment or recovery technologies. Consequently, the methodology focuses on deriving estimates of the quantities of waste that will require either commercial treatment or the construction of new on-site treatment as a result of the LDRs. EPA also estimates the quantities of waste that will be treated adequately either on site in existing systems or off site by facilities owned by the same company as the generator (i.e., captive facilities), and attempts to subtract that amount from the overall amount of required capacity.

B. Available Capacity for Surface Disposed Wastes

Available capacity was estimated for four treatment technology categories that are expected to be used for the majority of wastes in today's rule: stabilization (including chemical fixation), vitrification, metal recovery, and thermal treatment. (Numerous other types of treatment also can meet the treatment standards for much of these wastes, although the Agency did not find it necessary to present the estimates of available capacity of these treatments. See the Capacity Background Documents for further information.)

1. Stabilization

EPA estimates that there are at least several million mt/yr of available stabilization capacity, with most of it able to meet the treatment requirements for the TC metal wastes and newly identified mineral processing wastes. Furthermore, the Agency found that currently utilized stabilization capacity can be quickly modified (i.e., in less than 90 days) to meet the new treatment standards by implementing relatively simple changes to formulations. For additional details, see the Capacity Background Documents.

2. Vitrification

EPA has determined that vitrification technology is commercially available for treating limited quantities of Phase IV wastes, such as some arsenic wastes, that are difficult to treat using stabilization and other techniques. EPA estimates that there are approximately 15,000 mt/yr of available vitrification capacity.

3. Metal Recovery

High temperature and other types of metal recovery appears to be the most applicable treatment for certain wastes containing high concentrations of metal constituents. EPA identified and reviewed several metal recovery technologies that are commercially available, and has determined that at least 800,000 mt/yr of metal recovery capacity exists.

EPA recognizes, however, that not all of this capacity will be available for Phase IV wastes. For example, there are technical constraints on the metal recovery systems stemming from metal content limitations of the waste. Nevertheless, the Agency believes that a significant portion of this capacity is amenable to Phase IV wastes. For additional details, see the Capacity Background Documents.

4. Thermal Treatment

EPA estimates that there are approximately 231,000 mt/yr of commercial sludge/solid/soil combustion capacity and 651,000 mt/yr of commercial liquid combustion capacity available for wastes covered by today's rule. Other types of thermal treatment, such as thermal desorption, also are available. For additional details, see the Capacity Background Documents.

C. Required Capacity and Variance Determination for Surface Disposed TC Metal Wastes

EPA estimates that at most, 1.2 million mt/yr of TC metal wastes could require alternative treatment as a result of promulgation of today's rule. This estimate includes both wastes that are newly-identified TC wastes (i.e., wastes that do not fail the EP test, and, consequently, were not part of the Third Third LDR rule) and wastes that fail the EP test (i.e., those wastes that were regulated in the Third Third LDR rule). Although only the newly identified TC wastes are eligible for a national capacity variance, the capacity analysis includes all wastes affected by the rule because estimates for each category are not available, and, furthermore, because all of these wastes need to be assessed to determine the full impact of this rule on the need for a capacity variance. Additionally, the 1.2 million estimated quantity is likely to be an overestimate because most of these wastes are already meeting the new treatment standards. Also, most of these wastes are likely to fail the EP test and, therefore, are no longer eligible for a capacity variance.

The wastes that will require alternative treatment are expected to primarily only require optimization of existing stabilization formulations and systems. Also, sufficient vitrification capacity exists to treat the otherwise difficult-to-treat TC metal wastes, high temperature metal recovery capacity

exists for some of the TC metal wastes, and sufficient and other combustion capacity exists to pre-treat TC metal wastes that contain organic underlying hazardous constituents (UHCs). The Agency has determined that these conclusions also apply to TC metal contaminated debris. In addition, the other debris treatment technologies set out in 268.45 are widely available.

For TC metal contaminated soils, the Agency believes that the treatment standards, ten times UTS or 90% reduction, will not result in any capacity problems for treating metals since most soils are already meeting these standards and, furthermore, there is an excess of stabilization treatment capacity. Additionally, for treating organics to the alternative treatment standards, sufficient treatment capacity exists from use of other technologies (e.g., thermal desorption, soil washing, biotreatment).

To allow facilities time to determine whether their wastes are affected by this rule and identify and locate alternative treatment capacity if necessary, EPA is providing 90 days between the publication of today's rule and the effective date of the treatment standards for the TC metal wastes, including soil and debris, covered by today's rule. For a detailed discussion on data sources, methodology, and comments and responses for these wastes, see the Capacity Background Documents.

D. Required Capacity and Variance Determination for Surface Disposed Mineral Processing Wastes

EPA estimates that the maximum quantity of newly identified mineral processing wastes potentially requiring alternative treatment is approximately 1.9 million mt/yr. Most of these wastes (approximately 1.8 million mt/yr) are already being treated to nonhazardous levels and, therefore, are not expected to require much, if any, additional treatment. The remaining wastes, approximately 71,000 mt/yr, will require treatment to meet the treatment standards. However, adequate on-site and off-site treatment capacity is available for these wastes. The Agency has determined that these conclusions also apply to debris contaminated with mineral processing wastes. In addition, the other debris treatment technologies set out in 268.45 are widely available. For soils contaminated with mineral processing wastes, the Agency believes that the treatment standards, ten times UTS or 90 percent reduction, will not result in any capacity problems. Nevertheless, to allow time for activities such as treatment system modifications or to identify and locate alternative treatment capacity for process wastes, soil, and debris, EPA is providing 90 days between the publication of today's rule and the effective date of the treatment standards for the mineral processing wastes, contaminated soil (including MGP soil; see discussion below), and debris covered by today's rule (one exception is the elemental phosphorus wastes; see discussion below). For a detailed discussion on data sources, methodology, and comments and responses for these wastes, see the Capacity Background Documents.

EPA estimates that up to 1.2 million mt/yr of soil contaminated with "de-Bevilled" wastes may be remediated from historic manufactured gas plant (MGP) sites. In response to the first supplemental proposal, several commenters stated that more than 50 percent of the MGP remediation sites are currently co-burning the wastes in on-site coal-fired utility boilers and requested the Agency to allow co-burning of MGP soils in coal-fired utility boilers and exclude them from RCRA requirements. In today's rulemaking, the Agency is confirming its existing (and not reopened) interpretation that residues from co-burning hazardous MGP soils along with coal are covered by the Bevill amendment (assuming the residues are not significantly affected by such burning, as provided in section 266.112). In addition, as discussed elsewhere in this notice, the Agency is promulgating treatment standards (ten times UTS or 90 percent reduction) for contaminated soils. On-site treatment and existing commercially available treatment technologies can readily achieve—and to a large extent are already achieving—the treatment standards for contaminated MGP soil. Therefore, the Agency does not anticipate any capacity problems. To allow facilities time to determine whether their wastes are affected by this rule, to identify alternative treatment capacity if necessary, and to make contractual arrangements for transportation and other logistics, EPA is providing 90 days between the publication of today's rule and the effective date of the treatment standards for MGP soils.

In the first supplemental proposed rule, the Agency identified the following three waste streams generated from elemental phosphorus production as lacking sufficient commercial treatment capacity: Medusa scrubber blowdown, Anderson filter media rinsate, and furnace building washdown. A major generator of these waste streams, the FMC Corporation's Pocatello, Idaho facility, provided a substantial amount of data to show that these waste streams pose unique treatability problems (e.g., due the presence of naturally occurring radioactive materials (NORM)) and that a two-year national capacity variance is needed to develop and construct treatment capacity. After careful review of the data, EPA discussed in the May 10, 1996 Notice of Data Availability, the possibility of a two-year national capacity variance for these three large volume wastewater streams. In May 1997, EPA proposed the second supplemental Phase IV rule (62 FR 26041) and, in response to this proposal, FMC submitted a comment to EPA with new information identifying three other waste streams (NOSAP slurry, precipitator slurry, and phossy water) at its Pocatello, Idaho facility that FMC believes would be subject to Phase IV LDR requirements. FMC requested that a two-year national capacity variance also be granted for these three new waste streams. Like the original waste streams, the three newly identified streams are generated in the elemental phosphorous production process and contain varying amounts of both NORM and elemental phosphorous. FMC also noted that the AFM Rinsate waste stream, for which FMC originally requested a national capacity variance, has been completely eliminated, and that therefore a national capacity variance would no longer be needed for this waste stream. The Agency made these additional data available for public comment in a November 10, 1997 NODA (62 FR 60465). No adverse comments were received. The Agency has decided to grant a two-year capacity variance for all five FMC wastestreams.

Details of the methodology and estimates of affected facilities and waste quantities for the newly identified mineral processing wastes are provided in the Capacity Background Documents.

E. Phase IV Mineral Processing and TC Metal Wastes Injected Into Underground Injection Control (UIC) Class I Wells

Summary: EPA is granting a two-year capacity variance for UIC wells that inject newly identified mineral processing wastes from titanium dioxide production.

There are approximately 272 Class I injection well facilities nationwide. The Agency identified approximately 46 of those facilities as potentially injecting Phase IV wastes. These injected Phase IV wastes account for less than 15 percent of the total injectate being managed by Class I wells annually. Most of these facilities potentially identified already have approved no-migration

petitions. In assessing the impact of the Phase IV rule to operators of UIC facilities, the Agency found that the only potentially affected wells are those injecting newly identified characteristic mineral processing wastes, since other characteristic wastewaters were already prohibited in 1990 and the period for possible capacity extensions for these wastes has run out. (See UIC background document explaining in detail why the other wastes are unaffected.)

For a facility with an existing approved no-migration determination, the facility operator may have already incorporated the subject waste in the original petitions. Any facility with an approved no-migration determination without the waste already incorporated may submit a modified petition (40 CFR Part 148.20 (f)). However, if an injection well has received a no-migration determination, it can inject a newly prohibited waste only if the waste is similar to wastes included in the initial no-migration petition. The new wastes must behave hydraulically and chemically in a similar manner to those already included in the initial petition demonstration such that they will not interfere with the containment capability of the injection zone and the location of the waste plume will not significantly differ from the initial demonstration (See 40 CFR 148.20 (f) & UIC Program Guidance # 74)). Based on this information, promulgation of the Phase IV LDRs should have little impact on any facilities with approved petitions.

EPA estimates that approximately five million tons of mineral processing wastes are being disposed annually in UIC wells. Of these, approximately three million tons are attributable to titanium dioxide production from two DuPont facilities. This volume is a conservative estimate based on highly complex, non-segregable waste stream mixtures. This total volume would be subject to the LDR treatment standards. Titanium dioxide (TiO_2) production wastes are either generated onsite at facilities with injection wells, or at facilities without injection. For these DuPont facilities, this waste is generated and disposed onsite by injection wells. In order for these facilities to continue injection of this restricted waste, a no-migration petition must be approved to meet the conditions of 40 CFR Part 148.20 of the UIC regulations.

For those facilities disposing restricted Phase IV TiO_2 mineral processing waste, their options may be limited to meeting treatment standards (onsite or offsite), submitting a no-migration petition, transporting their waste to a commercial Class I hazardous disposal well facility, or deactivating (diluting) the waste to make it nonhazardous before injection (see RCRA section 3004 (g) (9), a recent amendment which allows such dilution). All of these options are resource intensive and owners/operators of these facilities will be faced with critical economic and business decisions. These TiO_2 facilities do not have immediate capability to treat their waste onsite. If they were to opt for treatment onsite, it would require substantial time and resources to build a treatment facility or to substantially modify their existing facility. It would take at least two years (and possibly longer) to construct such a treatment system. In evaluating various disposal alternatives, one DuPont facility is currently constructing a treatment works that will integrate a neutralization project based on current production. As an alternative to deep well injection disposal, the long term construction at this facility has been costly and operational start-up will require additional time to work out issues. See DuPont letter of Feb. 5, 1998.

With respect to the options of managing the waste water offsite, severe practical constraints limit the availability of capacity to these DuPont $Ti02$ facilities. A typical volume of $Ti02$ wastewater is 900,000 Gallons (3,750 tons) per day; and peak production volumes are 1 million Gallons (4,167 tons) per day. DuPont letters of Feb. 5 & 20, 1998. At peak production, this would take 200 tanker trucks per day for each affected facility to ship the volume of waste that is currently injected. Additionally, these trucks must be constructed with fiberglass or titanium tanks to be compatible to the low pH-highly corrosive acid waste (Note from ICF to R. E. Smith to RCRA Docket (Feb. 17, 1998)). Indeed, it is not even certain that existing 10, 000 gallon tanker trucks are compatible with this wastestream, due to its weight (the TDS content is so high that a 10, 000 gallon tanker could only be half full) and corrosivity. Dupont letter of Feb. 20, 1998.

Commercial waste management facilities normally cannot feasibly accommodate this daily volume. There are at least ten operating commercial Class I hazardous waste injection facilities nationwide, it is uncertain whether they have the capacity to accept 3 million tons of TiO_2 mineral processing waste annually for disposal because of permitting limitations. These commercial wells also have finite capacity limitations. The Agency studied the operational permit parameters of these commercial facilities and found that individual injection and flow capacity rates (UICWELLS Database) may restrict injection of additional high volumes of waste. Rates are scientifically and mathematically determined to avoid damage to the well and the injection zone. Further study of compatibility requirements for these wells suggest that they have acceptable construction for most wastes disposed but not necessarily for the TiO_2 production waste in its present concentration. Without pretreatment, these waste characteristics would require a more exotic well construction that is composed of fiberglass injection tubing, titanium casing and packer, epoxy and acid resistance compatible cement.

EPA has also looked at commercial wastewater treatment capacity in the vicinity of the two DuPont facilities. For one facility, there are no available commercial waste water treatment plants within 200 miles. For the other facility, there are two treatment plants within 75 miles but neither has the capacity to accept the high volumes of waste generated by either DuPont facility (based on BSR data). Commercial waste water treatment facilities generally handle corrosive toxic metal waste waters by stabilization and neutralization techniques. Treatment plants managing the $Ti02$ production waste waters would have to be specially constructed and equipped not only to be amenable to a high volume of acidic waste but also have the capacity to manage the huge amount of solids that will yield from treatment. Thus, wastewater treatment requires having pre-storage and processing units, adequate chemicals to neutralize the corrosive characteristic of the waste and stabilization technology to immobilize the metals before they are either stored onsite, marketed, or landfilled. While the Agency is satisfied that this treatment technology is applicable to $Ti02$ waste water, there is much reservation whether DuPont's facilities could realistically mobilize 200 tanker trucks per day per facility to safely ship this waste to these treatment facilities even if treatment capacity were readily available at them.

The statute also allows injection of waste waters which no longer exhibit a characteristic into Class I wells without meeting any other LDR treatment standard, and dilution may be used as a means of decharacterizing the waste. RCRA section 3004 (g) (9). However, deactivation of certain characteristic wastes through dilution is not always practical or even feasible. The whole waste stream process may not be amenable to dilution prior to injection

at the wellhead, and the geologic reservoirs into which the wells inject have a finite capacity. Sometimes filling up reservoirs with huge volumes of additional water shortens the life of the well operation because reservoir pressures build up much more quickly and the injection zone becomes "overpressurized." EPA finds that this is the case for the TiO2 wastewater at issue here. Thus, the dilution option cannot be utilized here to find that there is adequate available treatment capacity for these TiO2 wastes.

Capacity analyses usually focus on the demand for alternative capacity once existing on-site capacity and captive off-site capacity have been accounted for. However, capacity also may be unavailable if there is no practical means of utilizing it due to logistical problems. For example, in the Third Third rule, EPA relied on such logistical factors to determine when capacity was realistically available (see 55 FR 22645–22646, June 1, 1990). The Agency noted that injection wells at on-site facilities are directly connected to the plant operations and that in order to realistically arrange for off-site disposition of the waste, the plant managers will need time to make considerable logistical adjustments such as, repiping, retooling, and development of transportation networks at the plant operations. Similarly, for TiO2 waste facilities, the Agency doesn't believe that treatment capacity is available since there is no feasible way for generators to transport their wastes to the treatment facilities at this time, plus all of the other repiping that would be entailed. The Agency believes that it would take at least two years for the TiO2 facilities to alter their operations to ship wastewater to offsite facilities and for off-site facilities to make corresponding changes to their operations to accommodate the large influx of highly corrosive, high volume, dense wastewater (even if off-site facilities were to be willing to accept the waste, which is quite unclear).

Under these circumstances, the Agency finds that there is inadequate treatment, recovery, or disposal capacity presently available for TiO2 injected waste waters currently being injected into Class I hazardous wells, and therefore is granting a two-year national capacity variance for these wastes. The Agency expects that affected generators will utilize this period for applying for no-migration petitions for their existing wells, or to construct on-site wastewater treatment systems.

EPA estimates that there is approximately 2 million tons of other injected Phase IV mineral processing wastes (i.e. from processes other than TiO2 production). One facility with the largest volume of that injected waste has applied for and received an approved no-migration petition thus meeting the conditions of 40 CFR Part 148.20. The rest of these facilities are either applying dilution as a means of decharacterizing their waste (as allowed under Section 3004(g)(9)), or are treating their waste before disposal. Their waste volumes are much less than the TiO2 production waste being injected. Since the volume of wastes is so much less than TiO2, and the wastes are more amenable to conventional management, EPA does not see the same types of difficulties arising, and is therefore not delaying the effective date of the prohibition for these facilities. (See UIC background document).

F. Mixed Radioactive Wastes

Significant uncertainty exists about quantities of mixed radioactive wastes containing wastes that will require treatment as a result of today's rule. Despite this uncertainty, any new commercial capacity that becomes available will be needed for mixed radioactive wastes that were regulated in previous LDR rulemakings and whose variances have already expired. Thus, EPA has determined that sufficient alternative treatment capacity is not available, and therefore is granting a two-year national capacity variance for mixed RCRA/radioactive TC metal wastes that are newly identified (i.e., wastes, soil, or debris identified as hazardous by the TCLP but not the EP), and newly identified characteristic mineral processing wastes including soil and debris.

G. Summary

Table 1 summarizes the capacity variance determination for each category of Phase IV RCRA wastes for which EPA is promulgating LDR treatment standards.

TABLE OF CAPACITY VARIANCES FOR PHASE IV WASTES

[Note: Capacity variances begin from the publication date]

Waste description	Surface-disposed wastes	Deep well-injected wastes
Newly identified wastes from elemental phosphorus processing	Two years	Not applicable.
Newly identified mineral processing wastes from titanium dioxide production	90 days	Two years.
Newly identified TC metal wastes (i.e., wastes identified as hazardous by the TCLP but not the EP), and newly identified characterisitc mineral processing wastes including soil and debris.	90 days	90 days.
Radioactive wastes mixed with newly identified TC metal wastes (i.e., wastes identified as hazardous by the TCLP but not the EP), and mixed with newly identified characteristic mineral processing wastes, including soil and debris.	Two years	Two years.

X. Change to Definition of Solid Waste To Exclude Wood Preserving Wastewaters and Spent Wood Preserving Solutions From RCRA Jurisdiction

Summary: As proposed on May 12, 1997 (FR 62 26055), EPA is today amending the definition of solid waste to exclude wood preserving wastewaters and spent wood preserving solutions from RCRA jurisdiction provided that certain conditions are met, as specified below.

A. Summary of the Proposal

On May 12, 1997 in the Phase IV LDR second supplemental rulemaking, EPA proposed to amend the RCRA regulations to provide an exclusion from the definition of solid waste for certain materials generated and recycled by the wood preserving industry. Specifically, the proposal would exclude certain wood preserving wastewaters and spent wood preserving solutions from classification as solid waste under RCRA. Any wood preserving plant claiming the exclusion for these wastes would need to manage them according to the following criteria: (1) the materials must be recycled and reused on-site in the production process for their original intended purpose; (2) the materials must be managed to prevent release; (3) the plant must assure that the units managing these materials can be visually or otherwise determined to

prevent releases; and (4) drip pads managing these materials must comply with Subpart W drip pad standards regardless of whether the plant has been classified as a conditionally exempt small quantity generator (CESQG) (see 40 CFR 261.5). For a more detailed discussion of these conditions, please consult the relevant sections in the May 12, 1997 proposed rule.

As noted above, the exclusion was to be limited to wood preserving wastewaters and spent wood preserving solutions that are recycled and reused on-site at wood preserving plants in the production process for their original intended purpose. As EPA explained in the proposal, any listed wastewater or spent solution that is not recycled on-site according to the conditions of the exclusion is not excluded from the definition of solid waste. Moreover, the F032, F034 and F035 listings cover wastestreams other than wastewaters and spent solutions. These other listed wastestreams would not be eligible for exclusion even if recycled. This could include materials associated with wastewaters and spent solutions, such as residues that accumulate in a drip pad sump. EPA affirms this scope of the exclusion for the final rule.

It was neither the Agency's intent nor belief that the proposed exclusion would in any way reduce the obligations that wood preserving plants have under 40 CFR Part 264, Subpart W and Part 265, Subpart W, including the requirements for drip pads and the § 264.570(c) and § 265.440(c) requirements under for response to infrequent and incidental drippage in storage yards. The Agency specifically requested comment on whether the proposed exclusion would reduce these requirements. The Agency also sought comment on whether a plant claiming the proposed exclusion should be required to place a notification form to that effect in its files on-site and/or to submit it to either the EPA Regional Administrator or State Director to allow review. Finally, EPA asked for comment concerning the conditions under which the proposed exclusion, once claimed, would no longer apply.

Of course, this exclusion from the definition of solid waste under the federal RCRA statute does not modify any regulatory requirements that are independently imposed under other environmental statutes.

B. Modifications to the Proposal

The Agency received four sets of comments on the proposed exclusion for wood preserving wastewaters and spent wood preserving solutions. While some comments were supportive of the proposal, others were critical of the Agency for, among other things, relinquishing some regulatory oversight of the wood preserving industry. The comments EPA received on the scope of the proposed exclusion and the Agency's response can be found in the docket for this rulemaking. All comments were carefully considered. This section addresses those changes that EPA made to the proposed rule based on comments the Agency received. The next section ("Other Comments") addresses those aspects of the proposal that, though they remain unchanged by today's rule, require further clarification based on the comments received.

1. Notification

EPA received two responses to its request for comment on whether it was necessary for a plant claiming the proposed exclusion to provide notice to the appropriate regulatory agency and, if so, what type of notice that should be. One commenter suggested that the publication of the exclusion and its effective date by EPA in this final rule would serve as sufficient notice, and that notification on a plant specific basis is unnecessary. EPA does not consider publication of the final rule to provide adequate notice on the names and locations of wood preserving plants planning to operate under the conditional exclusion. Moreover, EPA is concerned that this commenter may have assumed that the exclusion would take effect nationwide upon publication. As explained below in the section titled "state authorization," this is not correct. The exclusion will not take effect in any authorized state unless and until the state adopts it.

The other commenter suggested that it is appropriate for wood preserving plants claiming an exclusion for their recycled wastewaters and spent solutions to notify the appropriate state agency. EPA considers notification to the appropriate regulatory agency to be essential to the proper implementation of this provision. To allow EPA and authorized states to verify that the conditions placed upon today's exclusion are properly met, it is important that wood preserving plants inform the appropriate Regional Administrator or State Director that they are claiming the exclusion and will therefore be reporting significantly lower waste generation totals. EPA is therefore revising the proposed exclusion to require a plant owner or operator (prior to operating pursuant to this exclusion) to submit to the appropriate Regional Administrator or State Director a one-time notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records for a period of no less than 3 years from the date specified in the notice.

2. Conditions Under Which the Exclusion Would No Longer Apply

EPA requested comment on conditions that void the exclusion. Specifically, EPA asked whether a spill should result in the loss of the exclusion just for the spilled material, or also for the wastewaters and spent solutions generated after the spill occurred. EPA received two comments on conditions under which the exclusion, once claimed, would no longer apply. One commenter stated that RCRA regulation should be required for all materials that are spilled or otherwise exit the recycling loop. The other commenter suggested that "a simple spill . . . is obviously not related to the normal operation of the drip pad . . ." and should therefore not void the exclusion for wastewaters and spent solutions that are collected and not spilled or released.

EPA agrees with the commenter who took the position that the spilled material itself should be ineligible for the exclusion. The spilled material inherently fails to meet the condition requiring plant operators to manage wastewaters and solutions so as to prevent releases. Although there could potentially be conditions under which a spilled material could still be eligible for the existing exclusions under § 261.4(a)(9)(i) and (ii) following reclamation, such materials are in all cases ineligible for today's new exclusion under § 261.4(a)(9)(iii).

To respond to the second comment, EPA has decided to clarify the effect of a violation of any condition, including the condition prohibiting spills, on wastewaters and spent solutions generated after a violation occurs. EPA has decided that the exclusion should not be available until the plant owner or operator notifies the appropriate regulatory agency, and the agency determines that the problem has been adequately addressed. It is appropriate to impose this requirement even for spills, because the significance of a spill may vary greatly from plant to plant and from incident to incident. EPA hopes

that a reviewing agency would quickly reinstate the exemption after a one-time spill, particularly if small, and would not require specific actions to correct the problem. In contrast, EPA would expect the reviewing agency to require specific actions (such as creation and implementation of a spill prevention plan) for a plant that experienced repeated spills. EPA believes the severity of any violation and the precise actions needed to return the plant to compliance can best be assessed on a case-by-case basis. EPA has added language to the regulation to clarify this issue. It applies to all of the conditions of the exclusion.

C. Other Comments

A number of comments indicated a need for EPA to clarify other aspects of the proposal that the Agency is finalizing today.

1. Oil Borne Facilities

One commenter suggested that the exclusion that EPA is finalizing today applies not only to water borne wood treating plants but also to oil borne wood treating plants. At the time of proposal, EPA intended to create an exclusion only for plants using water borne preservatives. See, for example, the discussion at 63 FR 26057, col. 1. EPA did not evaluate oil borne plants at the time. It is EPA's general understanding that plants which use oil borne preservatives do not recycle wastewaters and spent solutions by using them in the work tank to treat wood. Rather, they reuse these wastewaters in cooling systems, vacuum seals, and other devices. EPA wants to limit today's exclusion to materials that are reused for their original intended purpose—the treatment of wood. EPA has not had time to investigate the jurisdictional and factual issues posed by the use of wastewaters for other, more ancillary purposes. Consequently, EPA is not expanding the exclusion beyond the proposal. It applies only to water borne processes.

2. Application of the Conditions to Units Other Than the Drip Pad

One commenter expressed opposition to "any language that would extend the EPA's RCRA authority to devices that have previously not been regulated under RCRA." In view of this comment, the Agency is prompted to clarify that the conditions for claiming the exclusion must be met with regard to any unit that comes into contact with the recycled wastewaters and spent wood preserving solutions excluded in today's rule.

Thus, sumps or other units that are arguably part of an exempt wastewater treatment unit and that manage wastewaters and spent solutions are subject to these conditions. EPA has already stated that "management to prevent releases would include, but not necessarily be limited to, compliance with [Subpart W] and maintenance of the sumps receiving the wastewaters and spent solutions from the drip pad and retort to prevent leaching into land and groundwater." (62 FR 26057). The Agency must be able to verify that the excluded materials are being managed to prevent release at every step of the recycling process through reclamation to ensure that the basic technical and policy conditions underlying the exclusion are properly met.

3. Relationship of Today's Exclusion to Previous Industry Exclusions

One commenter wanted to assure that today's exclusion would not now regulate units that transmit or store materials that have been excluded according to other, currently existing regulations. EPA does not intend to use today's exclusion to rescind either of the exclusions that the Agency has previously granted the wood preserving industry under §§ 261.4(a)(9)(i) and (ii).

4. Units That May Be Visually or Otherwise Determined to Prevent Release

One commenter expressed concern that the term "units" is an overly broad way to refer to those portions of the system subject to RCRA inspection. EPA will now clarify which "units" are subject to inspection under the conditions of this exclusion. As mentioned above, all units that come into contact with the excluded materials prior to reclamation must necessarily be subject to verification that they are able to contain these materials in a manner that prevents their release to the environment. This includes, but is not necessarily limited to, any drip pad, sump, retort or conduit that comes into contact with the wastewaters and spent solutions prior to reclamation. This also includes any unit that is arguably part of a plant's wastewater treatment system but that comes into contact with the wastewaters or spent solutions prior to reclamation. An inspector must be able to determine (by visual or other means) whether these units are managing the wastewaters and spent solutions in a manner that prevents release. When relying on a visual inspection (as opposed to a leak detection system or other means), it may be necessary for an inspector to require these units be drained or cleaned for the inspector to make an informed determination as to whether the unit is cracked or leaking.

5. CESQG Status

One commenter also requested EPA to prevent wood preserving plants from becoming conditionally exempt small quantity generators (CESQGs) after claiming the exemption. The commenter was concerned that other, non-excluded wastestreams generated at these plants that are covered by the listings would no longer be subject to any hazardous waste regulation. As explained in more detail in the response to comment document, EPA lacks sufficient information about the volumes of these other wastes and the risks they pose to promulgate a rule creating an exception to the long-established CESQG exemption for them.

D. State Authorization

Upon promulgation, this exclusion will immediately go into effect only for plants in those states and territories that are not currently authorized to implement the RCRA program (i.e., Alaska, Iowa, Hawaii, American Samoa, Northern Mariana Islands, Puerto Rico and Virgin Islands). Plants in these states are subject to the provisions of the federal program. Conversely, any plant located in a RCRA authorized state will be unable to claim the exclusion we are finalizing today unless and until that state amends its regulations to include the exclusion. Because EPA allows state programs to be more stringent than the federal program, it is not necessarily guaranteed that all authorized states will elect to adopt this exclusion.

XI. Clarification of the RCRA Exclusion of Shredded Circuit Boards

In the May 12, 1997 final rule on Land Disposal Restrictions, the Environmental Protection Agency (EPA) excluded shredded circuit boards from the definition of solid waste conditioned on containerized storage prior to recovery. To be covered by this exclusion shredded circuit boards must be free of mercury switches, mercury relays, nickel-cadmium batteries or lithium batteries. On a related issue, current Agency policy states that *whole* circuit boards may meet the definition of scrap metal and therefore be exempt from hazardous waste regulation. In a parenthetical statement in the May 12, 1997 rule, the Agency asserted that whole used circuit boards which contain mercury switches, mercury relays, nickel-cadmium batteries, or lithium batteries also do not meet the definition of scrap metal because mercury (being a liquid metal) and batteries are not within the scope of the

definition of scrap metal. The preamble cited 50 FR 614, 624 (1985).

Members of the electronics industry expressed concern to the Agency about the preamble statement regarding the regulatory status of whole used circuit boards which contain mercury switches, mercury relays, nickel-cadmium batteries, or lithium batteries. The electronics industry indicated that its member have developed a sophisticated asset/materials recovery system to collect and transport whole used circuit boards to processing facilities. The industry explained that the boards are sent to processing facilities for evaluation (continued use, reuse or reclamation) where the switches and the types of batteries are generally removed by persons with the appropriate knowledge and tools for removing these materials. Once these materials are removed from the boards, they become a newly generated waste subject to a hazardous waste determination. If they fail a hazardous waste characteristic, they are handled as hazardous waste, otherwise they are managed as a solid waste. Information was also provided regarding the quantity of mercury on these switches and on the physical state in which they are found on the boards. The information indicates that the mercury switches and relays on circuit boards from some typical applications contain between 0.02–0.08 grams of mercury and are encased in metal which is then coated in epoxy prior to attachment to the boards.

In today's final rule, the Agency recognizes that the preamble statement in the May 12, 1997 final rule is overly broad in that it suggested that the scrap metal exemption would not apply to whole used circuit boards containing the kind of minor battery or mercury switch components and that are being sent for continued use, reuse, or recovery. It is not the Agency's current intent to regulate under RCRA circuit boards containing minimal quantities of mercury and batteries that are protectively packaged to minimize dispersion of metal constituents. Once these materials are removed from the boards, they become a newly generated waste subject to a hazardous waste determination. If they meet the criteria to be classified as a hazardous waste, they must be handled as hazardous waste, otherwise they must be managed as a solid waste.

XII. Regulatory Requirements

A. Regulatory Impact Analysis Pursuant to Executive Order 12866

Executive Order No. 12866 requires agencies to determine whether a regulatory action is "significant." The Order defines a "significant" regulatory action as one that "is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect, in a material way, the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or (4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order."

The Agency estimated the costs of today's final rule to determine if it is a significant regulation as defined by the Executive Order. The analysis considered compliance costs and economic impacts for newly identified wastes affected by this rule, as well as media contaminated with these wastes. In addition, the analysis addresses the cost savings associated with the new soil treatment standards being promulgated in today's rule. Newly identified mineral processing wastes covered under this rule include 118 mineral processing wastes identified as potentially characteristically hazardous. Also covered under this rule are TC metal wastes. Today's final rule also covers treatment standards for contaminated media (i.e., soil and sediment). EPA estimates the total cost of the rule to be a savings of $6 million annually, and concludes that this rule is not economically significant according to the definition in E.O. 12866. However, the Agency does consider this rule to be significant for novel policy reasons. The Office of Management and Budget has reviewed this rule.

Detailed discussions of the methodology used for estimating the costs, economic impacts and the benefits attributable to today's proposed rule for newly identified mineral processing wastes, followed by a presentation of the cost, economic impact and benefit results, may be found in the background documents: (1) "Regulatory Impact Analysis of the Phase IV Land Disposal Restrictions Final Rule for Newly Identified Mineral Processing Wastes," (2)"Regulatory Impact Analysis of the Phase IV Land Disposal Restrictions Final Rule for TC Metal Wastes," and (3) "Regulatory Impact Analysis of the Phase IV Land Disposal Restrictions Final Rule for Contaminated Media," which were placed in the docket for today's final rule.

1. Methodology Section

The Agency estimated the volumes of waste and contaminated media affected by today's rule to determine the national level incremental costs (for both the baseline and post-regulatory scenarios), economic impacts (including first-order measures such as the estimated percentage of compliance cost to industry or firm revenues), and benefits or risk-screens used to document the inherent hazard of materials being evaluated.

2. Results

a. Volume Results. EPA estimates that there are 29 mineral commodity sectors potentially affected by today's rule, including an estimated 136 facilities that generate 118 streams of newly identified mineral processing secondary materials. The estimated volume for these potentially affected newly identified mineral processing secondary materials is 22 million tons. Also, approximately 1.3 million tons of contaminated soil containing coal tar and other wastes from manufactured gas plants are potentially affected by this rule. As discussed below, EPA does not believe that any TC metal process wastes are potentially affected by today's final rule. EPA estimates that approximately 165,000 tons per year of soil and sediment contaminated with TC metals and approximately 90,000 tons per year of previously regulated contaminated soils is impacted by today's rule.

b. Cost Results For the part of today's final rule that prohibits land storage of mineral processing residues (below the high volume threshold) prior to being recycled, EPA estimates these expected case annualized compliance costs to be $10 million. The cost results for this part of today's final rule are a function of two factors: (1) the expense associated with purchasing new storage units or upgrading existing storage units, and (2) the transfer of some mineral processing residues either from recycling to disposal resulting in increased costs or from disposal to recycling resulting in a cost savings.

For TC metal wastes the Agency believes that there will be no incremental costs associated with stabilization of these wastes from the promulgation of these treatment standards.[47] In addition, EPA believes

[47] One possible exception to this are producers of hazardous waste-derived fertilizers. This is

that there will be no incremental treatment costs for the treatment of TC metal wastes that contain organic underlying hazardous constituents. Based on public comment and data collected from commercial hazardous waste treaters and generators, EPA believes that TC metal wastes are often already treated to these universal treatment standard levels when waste handlers treat to the current treatment standards using bona fide treatment reagents (e.g., portland cement).[48] Therefore, no additional treatment reagent or capital equipment associated with stabilization is required with these wastes.

Previously, EPA had estimated costs to the nonferrous foundry industry associated with complying with today's treatment standards. This estimate was modeled on trisodium phosphate with a ph buffer. When this type of treatment reagent is used, incremental quantities are required to achieve the universal treatment standards for cadmium promulgated in today's rule. However, based on contacts with trade associations and vendors of stabilization equipment, EPA believes that portland cement is equal to or less than the cost of trisodium phosphate and is therefore a more appropriate choice for modeling a compliance baseline from which to estimate the costs of the rule. Unlike trisodium phosphate, portland cement currently being used to meet existing treatment standards has been shown to meet the universal treatment standards without additional reagent. Accordingly, EPA believes that no incremental costs (or benefits) for stabilization are attributable to the promulgation of the universal treatment standards for TC metal wastes.

Although according to the American Foundrymen's Society iron filings are used by many nonferrous foundries as a treatment reagent, for the reasons discussed above under Section III (f), EPA does not believe that iron filings are a legitimate and effective form of treatment. Therefore, the costs of switching from iron filings to another form of treatment reagent such as portland cement is more appropriately characterized as a cost of coming into compliance with already existing treatment standards rather than an incremental cost attributable to today's rule. Although EPA does not believe the cost of switching from iron filings to another treatment reagent is attributable to today's final rule, the Agency has estimated these compliance costs and included this information in the background document "Regulatory Impact Analysis of the Phase IV Land Disposal Restrictions Final Rule for TC Metal Wastes," which was placed in the docket for today's final rule. EPA estimates that the annual cost to nonferrous foundries to switch from iron to portland cement to stabilize hazardous foundry sands is $11.7 million. Results from the risk screen for nonferrous foundry sands are discussed below.

For TC metal hazardous wastes that contain organic underlying hazardous constituents, one commenter has suggested that the Phase IV final rule would result in costs resulting from changing from stabilization of these wastes to incineration. EPA has evaluated data from the National Hazardous Waste Constituent Survey to assess both the prevalence and level of organic underlying hazardous constituents in TC metal wastes (solid and sludges). The results indicate that organic underlying hazardous constituents are rarely present in these wastes. Only seven of 181 TC metal hazardous wastes examined contained organic underlying hazardous constituents. Of these seven, only three contained organics above the Univeral Treatment Standard. None of the three waste steams that contained organics above the Univeral Treatment Standard was present in concentrations high enough to warrant incineration. In short, it is unlikely that organic underlying hazardous constituents will be present in TC metal wastes. And if present, incineration is unlikely to be used to treat these wastes. For reasons, EPA believes that the Phase IV final rule will not result in incremental costs for TC metal wastes containing organic underlying hazardous constituents.

The Agency is also promulgating new soil treatment standards in today's final rule. As these standards are less stringent than those currently required for previously regulated soils, an estimate of the cost savings associated with these standards has been prepared. The total incremental savings estimated for the new soil treatment standards is $25 million per year.

For contaminated soils which exhibit a characteristic for TC metals (including soils containing newly identified mineral processing wastes) but do not contain organic underlying hazardous constituents, there is no incremental cost expected from today's rule. These soils are subject to the new treatment standards which are less stringent than current LDR treatment standards for contaminated soils. The one category of TC hazardous metal contaminated soil that is potentially impacted by today's rule is TC hazardous metal contaminated soil which contains organic underlying hazardous constituents. These soils require additional treatment over that received in the baseline to effectively treat the organic constituents of concern. The Agency estimates that this additional requirement will result in a $3 million per year cost for these wastes, occurring mainly at voluntary cleanups and Superfund sites.

Manufactured gas plant contaminated soils (MGP) are a class of contaminated media that has heretofore not been subject to LDR treatment standards. EPA believes that some incremental costs may result from today's final rule to MGP clean ups involving the use of MGP soils in land applied recycling such as hot or cold mix asphalt, brick and concrete. It is possible that some of these soils will not meet the conditional exemption for waste-derived products that are used in a manner constituting disposal. 40 CFR § 266.20(b). For this reason, it is also possible that owner/operators of these sites may select an alternative remedy such as in-situ treatment or co-burning which are not affected by today's rule. On balance, EPA still believes that the promulgation of new treatment standards will encourage remediation of hazardous soils. The estimated annual costs to owner/operators of MGP sites for selecting remedies that are alternatives to asphalt, brick or concrete recycling are $6.2 million.

c. Economic Impact Results. To estimate potential economic impacts resulting from today's final rule, EPA has used first order economic impacts measures such as the estimated compliance cost of the rule as a percentage of sales/revenues, value added (sales less and material cost) and profit or return on capital. EPA has applied these measures to newly identified mineral processing hazardous wastes.

For recycled mineral processing secondary materials, EPA has evaluated the estimated compliance costs as a percentage of value (i.e. sales), value added and profits of the mineral commodities produced in each sector. In addition EPA has compared estimated compliance costs as a percentage of revenues to specific mineral processing firms to provide additional information on potential impacts.

---

discussed below under the Regulatory Flexibility section.

[48] December 19, 1996 letter to Anita Cummings, USEPA Office of Solid Waste from Michael G. Fusco, Director of Regulatory Analysis, Rollins Environmental Inc., p.4 of edited draft EPA trip report letter to Rollins Highway 36 facility in Colorado.

Economic impacts from today's rule for mineral processing facilities may or may not be substantial for selected mineral processing sectors depending on the actual storage and management of mineral processing residues prior to being recycled. In the expected case scenario up to 5 of the 29 commodity sectors are expected to incur compliance costs equal to or greater than 1 percent of the economic value of the mineral commodities produced under the Agency's proposed option in today's rule. These sectors include: cadmium, fluorspar and hydrofluoric acid, mercury, selenium and tungsten. The range of percentages in these sectors is between 2 percent (cadmium) and 36 percent (mercury). Because many of these sectors are actually co-processed with other mineral commodity sectors, these impacts may be distributed over the economic value of the other minerals, rather than concentrated solely on the mineral commodity associated with generating the secondary materials. For example, EPA has estimated that today's final rule may affect the cadmium and selenium sectors by imposing incremental costs equal to 18 percent of the value added of those minerals. The value added is equal to the market value of the minerals less the cost of the raw materials (i.e., ore concentrate). Cadmium is a co-product of zinc production and selenium is co-product of copper production; hence, these economic impacts are expected primarily to affect the production of these co-products and the reclamation of their residuals rather than the mineral processing operation as a whole. Because recovery for these co-product residuals is generally less expensive than treatment and disposal, EPA believes that the costs for these residuals will not significantly decrease their recovery although the storage costs could add to the expense.

As stated above, the Agency believes that there are no incremental costs associated with today's final rule for stabilization for handlers of TC metal hazardous wastes. Moreover, the Agency believes that there are no incremental costs associated with TC metal wastes containing organic underlying hazardous constituents may incur costs as described above and corresponding impacts. Accordingly, there is no economic impact for waste handlers managing TC metal wastes.

For TC hazardous foundry sands, EPA also believes that there is no economic impact attributable to today's final rule. As stated above, EPA views the cost associated from switching from iron filings to cement or other treatment reagent are not properly considered attributable to this rulemaking but rather a cost of coming into compliance with existing regulations. Moreover, even if these costs were attributable to this rulemaking, EPA estimates that incremental costs attributable to this switching from iron filings to portland cement are less than one percent of industry revenues and six percent of industry profits and therefore would not create a significant impact to these facilities. More detailed information on this estimate can be found in the regulatory impact analysis placed into today's docket.

As previously stated, EPA does not believe there are incremental costs associated with today's rule for TC hazardous metal contaminated soils except for TC hazardous metal contaminated soils that contain organic underlying hazardous constituents. EPA has evaluated the industries generating these TC metal organometallic soils and has determined that incremental costs from today's final rule do not impose a significant impact.

Similarly, EPA has determined for MGP site clean ups that the economic impact of today's rule is not a significant impact. The estimated percentage of compliance costs to firm sales is less than 1 percent.

d. Individual Risk Estimate Results. The Agency has performed an individual risk analysis to estimate the quantifiable central tendency and high-end hypothetical individual risk for mineral processing secondary materials associated with today's final rule to be above levels of concern for cancer and noncancer risks for specific mineral processing streams in both groundwater and nongroundwater pathways. Results suggest that central tendency and high-end hypothetical individual cancer and non-cancer risks may be decreased below 1×10^{-5} and below a reference dose ratio of 1 in a number of mineral processing facilities. These results are linked primarily with mineral processing liquid secondary materials stored in surface impoundments prior to reuse. The data used to calculate these results are based on the groundwater pathway as well as other potential routes of exposure such as air or surface water. The risk results indicate that the highest individual risks are associated with exposure through groundwater and surface water pathways. These results are also limited to a subset of the mineral processing universe being regulated today where the Agency has collected data from individual mineral processing facilities. EPA also notes that in completing these individual risk results that the entire mass of hazardous constituents available for release in the waste management unit was available for release through each pathway. This could result in overestimation in risks due to double counting of constituent mass. To address this factor, EPA conducted mass balance calculations for all non-groundwater release pathways. These calculations indicate that this potential overestimate would result in negligible bias because only a very small percentage of hazardous constituents in the waste mass is available for release. In addition, EPA did not conduct these mass balance calculations for the groundwater pathway because of limitations in the methodology for which individual groundwater risks were calculated. The Agency believes that the potential bias in risk results for both surface impoundments and waste piles is low.

As stated above the Agency's efforts to evaluate benefits for mineral processing secondary materials were limited to calculations for central tendency and high-end individual risk. However, due to data limitations, the Agency has been unable to evaluate additional more explicit risk-reduction benefits, including populations benefits. In general, the Agency's experience has been that it is unusual to predict high population risks, unless there is an unusually large water well supply impacted by the facility, because ground water contamination generally moves slowly and locally.

Although the regulatory impact analysis completed for today's rule does not address benefits associated with ecological risk reduction and a decrease in natural resource damages, based on a review of available information on damage incidents associated with mining and mineral processing operations[49], the Agency's experience is that, while these types of benefits are extremely difficult to quantify, this rule may produce benefits in the area of ecological risk reduction and reduced natural resource damage.

For TC metals, because the analysis shows that many handlers of TC metal wastes are already meeting the universal treatment standards being promulgated

[49] See Human Health and Environmental Damages from Mining and Mineral Processing Wastes, Technical Background Document Supporting the Supplemental Proposed Rule Applying Phase IV Land disposal Restrictions to Newly Identified Mineral Processing Wastes, U.S. Office of Solid Waste, U.S. Environmental Protection Agency, December 1995; Ecological Risk Assessment Southshore Wetlands for the Kennecott Utah Copper Salt Lake City, Utah. Working Draft March 4, 1996; May 7, 1996 letter from Max H. Dodson, Assistant Regional Administrator for Ecosytem Protection and Remediation, U.S.E.P.A, Region VIII to Michael Sahpiro, Director, Office of Solid Waste, U.S.E.P.A.

in today's rule, EPA does not believe that there are either incremental costs or benefits associated with stabilization of these wastes. However, for TC hazardous nonferrous foundry sands, the Agency has completed a risk screening for groundwater releases of lead and cadmium resulting from the disposal of untreated or poorly treated sands in municipal solid waste landfills. The results of the screen indicate that the probability the lead and cadmium would exceed the action level for lead of 0.015 mg/l or the drinking water standard for cadmium of 0.005 mg/l for untreated foundry sands was approximately 9 percent for lead and 14 percent for cadmium. The risk results also showed that the probability for hazardous foundry sands treated to the universal treatment standard to exceed these standards were approximately 2 percent for lead and 7 percent for cadmium. Because of data limitations, EPA is not able to demonstrate population benefits associated with effective treatment of foundry sands. These risk results do, however, document the intrinsic hazard of the sands and the need for effective treatment of these sands. However, as indicated above, EPA would attribute any public health benefits associated with decreasing lead and cadmium concentrations from foundry sands leachate to coming into compliance with existing regulations rather than promulgation of today's universal treatment standards.

B. Regulatory Flexibility

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions. Based on the following discussion, this final rule will not have a significant impact on a substantial number of small entities.

With respect to mineral processing facilities that are small entities, EPA believes that today's final rule will not pose a significant impact to a substantial number of these facilities. EPA identified 22 firms owning 24 mineral processing facilities that are small businesses based on the number of employees in each firm. Under the Agency's proposed option, zero firms out of the 24 identified incurred estimated compliance costs that exceed 1 percent of reported firm revenues.

As discussed above in the cost and economic impact section on TC metal wastes, EPA has determined that treating TC metal wastes will not result in incremental costs to the regulated community. As stated above, data from commercial treaters and generators of TC metal wastes indicate that the wastes are already treated to below UTS levels. Moreover, today's rule will not result in increased costs from incinerating TC metal wastes with organic underlying hazardous constituents. EPA's review of data from commercial hazardous wastes treatment facilities indicates that TC metal wastes with organic underlying hazardous constituents are not prevalent and when present would rarely require incineration.

Finally, after the close of the public comment period, representatives of small business hazardous waste-derived fertilizer producers met with the Agency claiming economic hardship resulting from the Agency's proposed UTS for metal wastes. Under existing 40 CFR § 266.20(b) commercial fertilizers sold for public use must meet treatment standards in order to be placed on the land. Currently all such hazardous waste fertilizers (except for K061–derived fertilizers) are subject to treatment standards for metals at the characteristic level. Based on available information, the Agency has found that out of 10 secondary small business zinc fertilizer producers only two firms in the United States produce a hazardous waste-derived fertilizer, meet the definition of a small business and are subject to this today's rule. Considering a limited range of regulatory responses (such as switching from a hazardous to a non-hazardous source of zinc waste), EPA believes that only one of the two firms could potentially incur a significant economic impact. Because only one firm in this industry is potentially affected by today's rule, EPA does not consider this to be a substantial number of small entitities.

Additionally, there are incremental costs estimated to result from today's rule to facilities undergoing remediation of TC metal contaminated soils and sediments with organic underlying hazardous constituents. EPA estimates that between 34 and 93 small entities would be impacted by these costs. Two firms out of the 93 identified as an upper bound estimate incurred estimated compliance costs that exceed 1 percent of reported firm revenues. Therefore, I certify that this action will not have a significant economic impact on a substantial number of small entities.

C. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), P.L. 104–4, establishes requirements for Federal Agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under Section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with "Federal mandates" that may result in expenditures to State, local, and tribal governments, in the aggregate, or to the private sector, of $100 million or more in any one year. Before promulgating an EPA rule for which a written statement is needed, section 205 of the UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost-effective, or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted. Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed under section 203 of the UMRA a small government agency plan. The plan must provide for notifying potentially affected small governments, enabling officials of affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

EPA has determined that this rule does not include a Federal mandate that may result in estimated costs of $100 million or more to either State, local, or tribal governments in the aggregate. The rule would not impose any federal intergovernmental mandate because it imposes no enforceable duty upon State, tribal or local governments. States, tribes and local governments would have no compliance costs under this rule. It is expected that states will adopt similar rules, and submit those rules for inclusion in their authorized RCRA programs, but they have no legally enforceable duty to do so. For the same reasons, EPA also has determined that this rule contains no regulatory

requirements that might significantly or uniquely affect small governments. In addition, as discussed above, the private sector is not expected to incur costs exceeding $100 million. EPA has fulfilled the requirement for analysis under the Unfunded Mandates Reform Act.

D. Paperwork Reduction Act

The information collection requirements in this rule have been submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 et seq. EPA has prepared an Information Collection Request (ICR) document: OSWER ICR No. 1442.15 would amend the existing ICR approved under OMB Control No. 2050–0085. This ICR has not been approved by OMB and the information collection requirements, although they are less stringent than those previously required by the EPA, are not enforceable until OMB approves the ICR. EPA will publish a document in the **Federal Register** when OMB approves the information collection requirements showing the valid OMB control number. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR Part 9 and 48 CFR Chapter 15.

Copies of this ICR may be obtained from Sandy Farmer, OPPE Regulatory Information Division; U.S. Environmental Protection Agency (2136); 401 M St., S.W.; Washington, D.C. 20460 or by calling (202) 260–2740. Include the ICR number in any request.

The Agency has estimated the average information collection burden of this final Phase IV rule to the private sector and the government. The burden of this final rule to the private sector is approximately 4,880 hours over three years, at a cost of $943,942. The burden to EPA is approximately 787 hours over three years, at a cost of $29,841. The term "burden'means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information; process and maintain information and comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Send comments on the Agency's burden reduction, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection of techniques to the Director, OPPE Regulatory Information Division; U.S. Environmental Protection Agency (2136); 401 M St., S.W.; Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th St., N.W., Washington, D.C. 20503, marked "Attention: Desk Officer for EPA." Include the ICR number in any correspondence.

XIII. Environmental Justice

A. Applicability of Executive Order 12898

EPA is committed to address environmental justice concerns and is assuming a leadership role in environmental justice initiatives to enhance environmental quality for all residents of the United States. The Agencies goals are to ensure that no segment of the population, regardless of race, color, national origin, or income bears disproportionately high and adverse human health and environmental effects as a result of EPA's policies, programs, and activities, and all people live in clean and sustainable communities.

B. Potential Effects

Today's rule covers high-metal wastes ("TC metal wastes," hazardous mineral processing wastes, and mineral processing materials). The rule will possibly affect many facilities nationwide, with the potential for impacts to minority or low-income communities. Today's rule is intended to reduce risks to human health and the environment, and to benefit all populations. It is not expected to cause any disproportionate impacts to minority or low income communities versus affluent or non-minority communities.

XIV. State Authority

A. Statutory Authority

Under section 3006 of RCRA, EPA may authorize qualified States to administer and enforce the RCRA hazardous waste program within the State. Following authorization, EPA retains enforcement authority under sections 3008 (a)(2), 3013, and 7003 of RCRA, although authorized States have primary enforcement responsibility. The standards and requirements for authorization are found in 40 CFR Part 271.

Prior to the Hazardous and Solid Waste Amendments of 1984 (HSWA), a State with final authorization administered its hazardous waste program in lieu of EPA administering the Federal program in that State. The Federal requirements no longer applied in the authorized State, and EPA could not issue permits for any facilities that the State was authorized to permit. When new, more stringent Federal requirements were promulgated or enacted, the State was obliged to enact equivalent authority within specified time frames. New Federal requirements did not take effect in an authorized State until the State adopted the requirements as State law.

In contrast, under RCRA section 3006(g) (42 U.S.C. 6926(g)) new requirements and prohibitions imposed by HSWA take effect in authorized States at the same time that they take effect in unauthorized States. Although States are still required to update their hazardous waste programs, EPA is directed to carry out the HSWA requirements and prohibitions in authorized States, including the issuance of permits, until the State is granted authorization.

Authorized States are required to modify their programs only when EPA promulgates Federal requirements that are more stringent or broader in scope than existing Federal requirements. RCRA section 3009 allows the States to impose standards more stringent than those in the Federal program. See also 40 CFR 271.1(i). Therefore, authorized States can, but do not have to, adopt Federal regulations, both HSWA and non-HSWA, that are considered less stringent. Less stringent regulations, promulgated under both HSWA and non-HSWA authority, do not go into effect in authorized States until those States adopt them and are authorized to implement them.

B. Effect on State Authorization

Today's rule is promulgated in part pursuant to non-HSWA authority, and in part pursuant to HSWA. The more stringent HSWA portions of this rule will become effective at the same time in all states. The new LDR treatment standards for metal-bearing and mineral processing wastes are being promulgated pursuant to section 3004 (g)(4) and (m), provisions added by HSWA. (Note, however, that the treatment standards, even though they are promulgated pursuant to HSWA, will not apply to mineral processing wastes unless the wastes are currently included in the authorized State's

definition of solid waste.) The application of the TCLP to mineral processing wastes likewise implements a HSWA provision, section 3001(g). These requirements are being added to Table 1 in 40 CFR 271.1(j), which identifies the Federal program requirements that are promulgated pursuant to HSWA, and would take effect in all States, regardless of authorization status. States may apply for final or interim authorization for the HSWA provisions in Table 1, as discussed in the following section of this preamble. Table 2 in 40 CFR 271.1(j) is also modified to indicate those provisions of this rule that are self-implementing provisions of HSWA. Note that there are other HSWA provisions that are not more stringent than the current program, such as the revisions to certain of the existing LDR treatment standards. These would not be implemented by EPA in those states authorized for the existing provisions prior to a State being authorized for them. These provisions are further discussed below.

Today's rule contains provisions, both under HSWA and non-HSWA authority, that are less stringent than the current Federal program. First is the non-HSWA provision which would allow mineral processing spent materials being reclaimed within the mineral processing industry sector, or in beneficiation processes, to be excluded from the definition of solid waste. This provision can be adopted at the States' option, although EPA strongly encourages States to adopt this provision. As stated earlier in the preamble, part of the purpose of this rule is to eliminate distinctions among reclaimed spent materials, by-products, and sludges within this industry. This change, in combination with the conditioned exclusion for the reclaimed byproducts and sludges, will result in more control over land-based mineral processing units than exists presently, encourage additional material recovery within the industry, properly control land-based storage of mineral processing industry secondary materials awaiting intra-industry recovery, and also simplify the solid waste regulatory classification scheme. In addition, State adoption of these provisions will provide national consistency.

Similarly, another less stringent non-HSWA provision in this rule excludes from RCRA regulation certain recycled wood preserving wastewaters and spent wood preserving solutions. The exclusion will not be effective in authorized States until they amend their regulations and received authorization. Although the States do not have to adopt these provisions, EPA strongly encourage them to do so, because the exclusion encourages properly conducted material recovery in the wood preserving industry.

Last, the treatment standards for soil contaminated with hazardous waste (and the associated site-specific risk based variance provision for contaminated soils), promulgated under HSWA, are less stringent than the existing treatment standards. Although the authority for these standards is under HSWA, EPA will not implement them in those States that are authorized for the existing standards because they are less stringent. EPA will implement them in those States that are unauthorized for the applicable existing treatment standards. However, EPA strongly encourages States to seek authorization for these standards in order to encourage and speed up cleanups of contaminated sites based on remedies involving treatment of contaminated soils, thus providing more permanent remedial solutions.

Some of today's regulatory amendments are neither more or less stringent than the existing Federal requirements. These are the revisions to the existing UTS numbers. EPA clarified in a December 19, 1994, memorandum (which is in the docket for today's rule) that EPA would not implement the Universal Treatment Standards (promulgated under HSWA authority in the Phase II LDR rule) separately for those States for which the State has received LDR authorization. EPA views changes from the existing limits to be neither more or less stringent since the technology basis of the standards has not changed. Accordingly, EPA will not implement today's amendments to the UTS in those States with authorization for the treatment standards.

Today's rule also clarifies the scrap metal exemption from solid waste as it applies to whole circuit boards. This part of the preamble simply clarifies the Agency's interpretation of the existing rules. If authorized for the scrap metal exemption, States do not need further authorization to interpret their rules in conformity with this interpretation.

C. Authorization Procedures

Because portions of today's rule are promulgated pursuant to HSWA, a State submitting a program modification for those portions may apply to receive interim authorization under RCRA section 3006(g)(2) or final authorization under RCRA section 3006(b), on the basis of requirements that are, respectively, substantially equivalent or equivalent to EPA's. For program modifications for the non-HSWA portions of this rule, States can received final authorization only. The procedures and schedule for final authorization of State program modifications are described in 40 CFR 271.21. It should be noted that all HSWA interim authorizations will expire January 1, 2003. (See 40 CFR 271.24(c) and 57 FR 60132, December 18, 1992.)

Section 271.21(e)(2) requires that States with final authorization modify their programs to reflect Federal program changes and subsequently submit the modification to EPA for approval. The deadline by which the State would have to modify its program to adopt these regulations is specified in section 271.21(e). This deadline can be extended in certain cases (see section 271.21(e)(3)). Once EPA approves the modification, the State requirements become Subtitle C RCRA requirements.

States with authorized RCRA programs may already have requirements similar to those in today's rule. These State regulations have not been assessed against the Federal regulations being promulgated today to determine whether they meet the tests for authorization. Thus, a State is not authorized to implement these requirements in lieu of EPA until the State program modifications are approved. Of course, States with existing standards could continue to administer and enforce their standards as a matter of State law. In implementing the Federal program, EPA will work with States under agreements to minimize duplication of efforts.

D. Streamlined Authorization Procedures

It is EPA's policy to provide as much flexibility as possible to encourage States to become authorized for rules under the hazardous waste program. EPA discussed an expedited authorization approach in the proposed Phase IV LDR rule (60 FR 43688, August 22, 1995), and the supplemental proposal (61 FR 2338, January 25, 1996). EPA also discussed streamlined authorization procedures in a more comprehensive fashion in the proposed HWIR-media rule (61 FR 18780, April 29, 1996). This expedited approach would apply to those minor or routine changes to the existing program that do not expand the scope of the program in significant ways, and was called Category 1. EPA has decided to address this proposed authorization procedure in the upcoming HWIR-Media rule rather than here, so that the expedited authorization approaches can be dealt with in a comprehensive manner.

XV. Submission to Congress and General Accounting Office

The Congressional Review Act, 5 U.S.C. § 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a "major rule" as defined by 5 U.S.C. § 804(2).

XVI. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045: The Executive Order 13045 applies to any rule that EPA determines (1) "economically significant" as defined under Executive Order 12866, and (2) the environmental health or safety risk addressed by the rule has a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This final rule is not subject to E.O. 13045, entitled "Protection of Children from Environmental Health Risks and Safety Risks (62FR19885, April 23, 1997), because this is not an economically significant regulatory action as defined by E.O. 12866.

XVII. National Technology Transfer and Advancement Act

Under § 12(d) of the National Technology Transfer and Advancement Act, the Agency is directed to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, business practices, etc.) that are developed or adopted by voluntary consensus standard bodies. Where available and potentially applicable voluntary consensus standards are not used by EPA, the Act requires the Agency to provide Congress, through the Office of Management and Budget, an explanation of the reasons for not using such standards.

EPA is not proposing any new test methods or other technical standards as part of today's final rule. Thus, the Agency has no need to consider the use of voluntary consensus standards in developing this proposed rule.

List of Subjects

40 CFR Part 148

Administrative practice and procedure, Hazardous waste, Reporting and recordkeeping requirements, Water supply.

40 CFR Part 261

Environmental protection, Hazardous waste, Recycling, Reporting and recordkeeping requirements.

40 CFR Part 266

Energy, Hazardous waste, Recycling, Reporting and recordkeeping requirements.

40 CFR Part 268

Hazardous waste, Reporting and recordkeeping requirements.

40 CFR Part 271

Administrative practice and procedure, Hazardous materials transportation, Hazardous waste, Penalties, Reporting and recordkeeping requirements.

Dated: April 30, 1998.

Carol M. Browner,

Administrator.

For the reasons set out in the preamble, Title 40, chapter I of the Code of Federal Regulations is amended as follows:

PART 148—HAZARDOUS WASTE INJECTION RESTRICTIONS

1. The authority citation for Part 148 continues to read as follows:

Authority: Secs. 3004, Resource Conservation and Recovery Act, 42 U.S.C. 6901, *et seq.*

2. Section 148.18 is amended by redesignating paragraphs (a) through (f) as (c) through (h) respectively, and by adding paragraphs (a) and (b) to read as follows:

§ 148.18 Waste specific prohibitions—newly listed and identified wastes.

(a) Effective August 24, 1998, all newly identified D004–D011 wastes and characteristic mineral processing wastes, except those identified in paragraph (b) of this section, are prohibited from underground injection.

(b) Effective May 26, 2000, characteristic hazardous wastes from titanium dioxide mineral processing, and radioactive wastes mixed with newly identified D004–D011 or mixed with newly identified characteristic mineral processing wastes, are prohibited from underground injection.

* * * * *

PART 261—IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

Subpart A—General

3. The authority citation for Part 261 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), 6921, 6922, 6924(y), and 6938.

4. Section 261.2 is amended by revising Table 1 in paragraph (c)(4), paragraph (c)(3) and (e)(1)(iii) to read as follows:

§ 261.2 Definition of solid waste.

* * * * *

(c) * * *

(3) *Reclaimed.* Materials noted with a "*" in column 3 of Table 1 are solid wastes when reclaimed (except as provided under 40 CFR 261.4(a)(15)). Materials noted with a "—" in column 3 of Table 1 are not solid wastes when reclaimed (except as provided under 40 CFR 261.4(a)(15)).

* * * * *

(4) * * *

(e) * * *

(1) * * *

(iii) In cases where the materials are generated and reclaimed within the primary mineral processing industry, the conditions of the exclusion found at § 261.4(a)(15) apply rather than this provision.

* * * * *

5. Section 261.3 is amended by revising paragraphs (a)(2)(i) and (a)(2)(iii) to read as follows:

§ 261.3 Definition of hazardous waste.

(a) * * *

(2) * * *

(i) It exhibits any of the characteristics of hazardous waste identified in subpart C of this part. However, any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded under § 261.4(b)(7) and any other solid waste exhibiting a characteristic of hazardous waste under subpart C is a hazardous waste only if it exhibits a characteristic that would not have been exhibited by the excluded waste alone if such mixture had not occurred, or if it continues to exhibit any of the characteristics exhibited by the non-excluded wastes prior to mixture. Further, for the purposes of applying the Toxicity Characteristic to such mixtures, the mixture is also a hazardous waste if it exceeds the maximum concentration for any contaminant listed in table I to § 261.24 that would not have been exceeded by the excluded waste alone if the mixture had not occurred or if it continues to exceed the maximum concentration for any contaminant exceeded by the nonexempt waste prior to mixture.

* * * * *

(iii) It is a mixture of a solid waste and a hazardous waste that is listed in subpart D of this part solely because it exhibits one or more of the characteristics of hazardous waste identified in subpart C of this part, unless the resultant mixture no longer exhibits any characteristic of hazardous waste identified in subpart C of this part, or unless the solid waste is excluded from regulation under § 261.4(b)(7) and the resultant mixture no longer exhibits any characteristic of hazardous waste identified in subpart C of this part for which the hazardous waste listed in subpart D of this part was listed. (However, nonwastewater mixtures are still subject to the requirements of part 268 of this chapter, even if they no longer exhibit a characteristic at the point of land disposal).

* * * * *

6. Section 261.4 is amended by adding paragraphs (a)(9)(iii) and (a)(16) and by revising paragraph (b)(7) to read as follows:

§ 261.4 Exclusions.

(a) * * *

(9) * * *

(iii) Prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in paragraphs (a)(9)(i) and (a)(9)(ii) of this section, so long as they meet all of the following conditions:

(A) The wood preserving wastewaters and spent wood preserving solutions are reused on-site at water borne plants in the production process for their original intended purpose;

(B) Prior to reuse, the wastewaters and spent wood preserving solutions are managed to prevent release to either land or groundwater or both;

(C) Any unit used to manage wastewaters and/or spent wood preserving solutions prior to reuse can be visually or otherwise determined to prevent such releases;

(D) Any drip pad used to manage the wastewaters and/or spent wood preserving solutions prior to reuse complies with the standards in part 265, subpart W of this chapter, regardless of whether the plant generates a total of less than 100 kg/month of hazardous waste; and

(E) Prior to operating pursuant to this exclusion, the plant owner or operator submits to the appropriate Regional Administrator or State Director a one-time notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records for a period of no less than 3 years from the date specified in the notice. The exclusion applies only so long as the plant meets all of the conditions. If the plant goes out of compliance with any condition, it may apply to the appropriate Regional Administrator or State Director for reinstatement. The Regional Administrator or State Director may reinstate the exclusion upon finding that the plant has returned to compliance with all conditions and that violations are not likely to recur.

* * * * *

(16) Secondary materials (i.e., sludges, by-products, and spent materials as defined in § 261.1) (other than

hazardous wastes listed in subpart D of this part) generated within the primary mineral processing industry from which minerals, acids, cyanide, water or other values are recovered by mineral processing, provided that:

(i) The secondary material is legitimately recycled to recover minerals, acids, cyanide, water or other values;

(ii) The secondary material is not accumulated speculatively;

(iii) Except as provided in paragraph (a)(15)(iv) of this section, the secondary material is stored in tanks, containers, or buildings meeting the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof all of which are made of non-earthen materials providing structural support (except smelter buildings may have partially earthen floors provided the secondary material is stored on the non-earthen portion), and have a roof suitable for diverting rainwater away from the foundation; a tank must be free standing, not be a surface impoundment (as defined in 40 CFR 260.10), and be manufactured of a material suitable for containment of its contents; a container must be free standing and be manufactured of a material suitable for containment of its contents. If tanks or containers contain any particulate which may be subject to wind dispersal, the owner/operator must operate these units in a manner which controls fugitive dust. Tanks, containers, and buildings must be designed, constructed and operated to prevent significant releases to the environment of these materials.

(iv) The Regional Administrator or the State Director may make a site-specific determination, after public review and comment, that only solid mineral processing secondary materials may be placed on pads, rather than in tanks, containers, or buildings. Solid mineral processing secondary materials do not contain any free liquid. The decision-maker must affirm that pads are designed, constructed and operated to prevent significant releases of the secondary material into the environment. Pads must provide the same degree of containment afforded by the non-RCRA tanks, containers and buildings eligible for exclusion.

(A) The decision-maker must also consider if storage on pads poses the potential for significant releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, air exposure pathways are: the volume and physical and chemical properties of the secondary material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway, and the possibility and extent of harm to human and environmental receptors via each exposure pathway.

(B) Pads must meet the following minimum standards: be designed of non-earthen material that is compatible with the chemical nature of the mineral processing secondary material, capable of withstanding physical stresses associated with placement and removal, have run on/runoff controls, be operated in a manner which controls fugitive dust, and have integrity assurance through inspections and maintenance programs.

(C) Before making a determination under this paragraph, the Regional Administrator or State Director must provide notice and the opportunity for comment to all persons potentially interested in the determination. This can be accomplished by placing notice of this action in major local newspapers, or broadcasting notice over local radio stations.

(v) The owner or operator provides a notice to the Regional Administrator or State Director, identifying the following information; the types of materials to be recycled; the type and location of the storage units and recycling processes; and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process.

(vi) For purposes of § 261.4(b)(7), mineral processing secondary materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by non-mineral processing industries are not eligible for the conditional exclusion from the definition of solid waste.

(b) * * *

(7) Solid waste from the extraction, beneficiation, and processing of ores and minerals (including coal, phosphate rock, and overburden from the mining of uranium ore), except as provided by § 266.112 of this chapter for facilities that burn or process hazardous waste.

(i) For purposes of § 261.4(b)(7) beneficiation of ores and minerals is restricted to the following activities; crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water and/or carbon dioxide; roasting, autoclaving, and/or chlorination in preparation for leaching (except where the roasting (and/or autoclaving and/or chlorination)/ leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; flotation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat, tank, and in situ leaching.

(ii) For the purposes of § 261.4(b)(7), solid waste from the processing of ores and minerals includes only the following wastes as generated:

(A) Slag from primary copper processing;

(B) Slag from primary lead processing;

(C) Red and brown muds from bauxite refining;

(D) Phosphogypsum from phosphoric acid production;

(E) Slag from elemental phosphorus production;

(F) Gasifier ash from coal gasification;

(G) Process wastewater from coal gasification;

(H) Calcium sulfate wastewater treatment plant sludge from primary copper processing;

(I) Slag tailings from primary copper processing;

(J) Fluorogypsum from hydrofluoric acid production;

(K) Process wastewater from hydrofluoric acid production;

(L) Air pollution control dust/sludge from iron blast furnaces;

(M) Iron blast furnace slag;

(N) Treated residue from roasting/ leaching of chrome ore;

(O) Process wastewater from primary magnesium processing by the anhydrous process;

(P) Process wastewater from phosphoric acid production;

(Q) Basic oxygen furnace and open hearth furnace air pollution control dust/sludge from carbon steel production;

(R) Basic oxygen furnace and open hearth furnace slag from carbon steel production;

(S) Chloride process waste solids from titanium tetrachloride production;

(T) Slag from primary zinc processing.

(iii) A residue derived from co-processing mineral processing secondary materials with normal beneficiation raw materials remains excluded under paragraph (b) of this section if the owner or operator:

(A) Processes at least 50 percent by weight normal beneficiation raw materials; and,

(B) Legitimately reclaims the secondary mineral processing materials.

* * * * *

PART 268—LAND DISPOSAL RESTRICTIONS

7. The authority citation for Part 268 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), 6921, and 6924.

8. Section 268.2 is amended by revising paragraph (i) and adding paragraph (k) to read as follows:

§ 268.2 Definitions applicable in this part.

* * * * *

(i) Underlying hazardous constituent means any constituent listed in § 268.48, Table UTS—Universal Treatment Standards, except fluoride, selenium, sulfides, vanadium, and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste at a concentration above the constituent-specific UTS treatment standards.

* * * * *

(k) Soil means unconsolidated earth material composing the superficial geologic strata (material overlying bedrock), consisting of clay, silt, sand, or gravel size particles as classified by the U.S. Soil Conservation Service, or a mixture of such materials with liquids, sludges or solids which is inseparable by simple mechanical removal processes and is made up primarily of soil by volume based on visual inspection.

9. Section 268.3 is amended by adding paragraph (d) to read as follows:

§ 268.3 Dilution prohibited as a substitute for treatment.

* * * * *

(d) It is a form of impermissible dilution, and therefore prohibited, to add iron filings or other metallic forms of iron to lead-containing hazardous wastes in order to achieve any land disposal restriction treatment standard for lead. Lead-containing wastes include D008 wastes (wastes exhibiting a characteristic due to the presence of lead), all characteristic wastes containing lead as an underlying hazardous constituent, listed wastes containing lead as a regulated constitutent, and hazardous media containing any of the aforementioned lead-containing wastes.

10. Section 268.4 is amended by revising paragraphs (a)(2)(ii) and (a)(2)(iii) to read as follows:

§ 268.4 Treatment surface impoundment exemption.

(a) * * *

(2) * * *

(ii) Removal. The following treatment residues (including any liquid waste) must be removed at least annually; residues which do not meet the treatment standards promulgated under subpart D of this part; residues which do not meet the prohibition levels established under subpart C of this part or imposed by statute (where no treatment standards have been established); residues which are from the treatment of wastes prohibited from land disposal under subpart C of this part (where no treatment standards have been established and no prohibition levels apply); or residues from managing listed wastes which are not delisted under § 260.22 of this chapter. If the volume of liquid flowing through the impoundment or series of impoundments annually is greater than the volume of the impoundment or impoundments, this flow-through constitutes removal of the supernatant for the purpose of this requirement.

(iii) Subsequent management. Treatment residues may not be placed in any other surface impoundment for subsequent management.

* * * * *

11. Section 268.7 is amended by revising paragraphs (a)(1), (a)(3)(ii), (a)(7), (b)(1), (b)(2), (b)(5) and (b)(6); by revising the first sentence of the paragraphs (a)(2), (a)(3) introductory text, (a)(4), (a)(5) introductory text, (a)(6), and (b)(3) introductory text; by adding paragraph (a)(2)(i) and three sentences to the end of paragraph (b)(4) introductory text and adding paragraphs (b)(4)(iv), (b)(4)(v), and (e) and adding and reserving paragraph (a)(2)(ii); and by revising entries 1 and 3, designating entry 8 as 9, and adding entry 8 in the table entitled "Generator Paperwork Requirements Table" in paragraph (a)(4), and by revising entries 1 and 2 designating entry 5 as 6, and adding entry 5 in the table entitled "Treatment Facility Paperwork Requirements Table" in paragraph (b)(3)(ii) to read as follows:

§ 268.7 Testing, tracking, and recordkeeping requirements for generators, treaters, and disposal facilities.

(a) * * *

(1) A generator of hazardous waste must determine if the waste has to be treated before it can be land disposed. This is done by determining if the hazardous waste meets the treatment standards in § 268.40, § 268.45, or § 268.49. This determination can be made in either of two ways: testing the waste or using knowledge of the waste. If the generator tests the waste, testing would normally determine the total concentration of hazardous constituents, or the concentration of hazardous constituents in an extract of the waste obtained using test method 1311 in "Test Methods of Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW–846, as referenced in § 260.11 of this chapter, depending on whether the treatment standard for the waste is expressed as a total concentration or concentration of hazardous constituent in the waste's extract. In addition, some hazardous wastes must be treated by particular treatment methods before they can be land disposed and some soils are contaminated by such hazardous wastes. These treatment standards are also found in § 268.40, and are described in detail in § 268.42, Table 1. These wastes, and soils contaminated with such wastes, do not need to be tested (however, if they are in a waste mixture, other wastes with concentration level treatment standards would have to be tested). If a generator determines they are managing a waste or soil contaminated with a waste, that displays a hazardous characteristic of ignitability, corrosivity, reactivity, or toxicity, they must comply with the special requirements of § 268.9 of this part in addition to any applicable requirements in this section.

(2) If the waste or contaminated soil does not meet the treatment standard: With the initial shipment of waste to each treatment or storage facility, the generator must send a one-time written notice to each treatment or storage facility receiving the waste, and place a copy in the file. * * *

(i) For contaminated soil, the following certification statement should be included, signed by an authorized representative:

I certify under penalty of law that I personally have examined this contaminated soil and it [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and requires treatment to meet the soil treatment standards as provided by 268.49(c).

(ii) [Reserved]

(3) If the waste or contaminated soil meets the treatment standard at the original point of generation:

* * * * *

(ii) For contaminated soil, with the initial shipment of wastes to each treatment, storage, or disposal facility, the generator must send a one-time written notice to each facility receiving the waste and place a copy in the file. The notice must include the information in "268.7(a)(3) of the Generator Paperwork Requirements Table in § 268.7(a)(4).

(4) For reporting, tracking, and recordkeeping when exceptions allow certain wastes or contaminated soil that

do not meet the treatment standards to be land disposed: There are certain exemptions from the requirement that hazardous wastes or contaminated soil meet treatment standards before they can be land disposed. * * *

* * * * *

GENERATOR PAPERWORK REQUIREMENTS TABLE

Required information	§ 268.7 (a)(2)	§ 268.7 (a)(3)	§ 268.7 (a)(4)	§ 268.7 (a)(9)
1. EPA Hazardous Waste Numbers and Manifest Number of first shipment.				
. . . .	.	.		.
3. The waste is subject to the LDRs. The constituents of concern for F001–F005, and F039, and underlying hazardous constituents in characteristic wastes, unless the waste will be treated and monitored for all constituents. If all constituents will be treated and monitored, there is no need to put them all on the LDR notice	✔			
. . . .	.	.		.
8. For contaminated soil subject to LDRs as provided in 268.49(a), the constituents subject to treatment as described in 268.49(d), and the following statement: This contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and [is subject to/complies with' the soil treatment standards as provided by 268.49(c) or the universal treatment standards.	✔			
. . . .	.	.		.

(5) If a generator is managing and treating prohibited waste or contaminated soil in tanks, containers, or containment buildings regulated under 40 CFR 262.34 to meet applicable LDR treatment standards found at § 268.40, the generator must develop and follow a written waste analysis plan which describes the procedures they will carry out to comply with the treatment standards. * * *

* * * * *

(6) If a generator determines that the waste or contaminated soil is restricted based solely on his knowledge of the waste, all supporting data used to make this determination must be retained on-site in the generator's files. * * *

(7) If a generator determines that he is managing a prohibited waste that is excluded from the definition of hazardous or solid waste or is exempted from Subtitle C regulation under 40 CFR 261.2 through 261.6 subsequent to the point of generation (including deactivated characteristic hazardous wastes managed in wastewater treatment systems subject to the Clean Water Act (CWA) as specified at 40 CFR 261.4(a)(2) or that are CWA-equivalent, or are managed in an underground injection well regulated by the SDWA), he must place a one-time notice describing such generation, subsequent exclusion from the definition of hazardous or solid waste or exemption from RCRA Subtitle C regulation, and the disposition of the waste, in the facility's on-site files.

* * * * *

(b) * * *

(1) For wastes or contaminated soil with treatment standards expressed in the waste extract (TCLP), the owner or operator of the treatment facility must test an extract of the treatment residues, using test method 1311 (the Toxicity Characteristic Leaching Procedure, described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW–846 as incorporated by reference in § 260.11 of this chapter) to assure that the treatment residues extract meet the applicable treatment standards.

(2) For wastes or contaminated soil with treatment standards expressed as concentrations in the waste, the owner or operator of the treatment facility must test the treatment residues (not an extract of such residues) to assure that they meet the applicable treatment standards.

(3) A one-time notice must be sent with the initial shipment of waste or contaminated soil to the land disposal facility. * * *

* * * * *

(ii) * * *

TREATMENT FACILITY PAPERWORK REQUIREMENTS TABLE

Required information	§ 268.7(b)
1. EPA Hazardous Waste Numbers and Manifest Number of first shipment.	
2. The waste is subject to the LDRs. The constituents of concern for F001–F005, and F039, and underlying hazardous constituents in characteristic wastes, unless the waste will be treated and monitored for all constituents. If all constituents will be treated and monitored, there is no need to put them all on the LDR notice.	✔
. . . . .	.
5. For contaminated soil subject to LDRs as provided in 268.49(a), the constituents subject to treatment as described in 268.49(d) and the following statement, "this contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit acharacteristic of hazardous waste and [is subject to/complies with] the soil treatment standards as provided by 268.49(c).	✔
. . . . .	.

(4) * * * A certification is also necessary for contaminated soil and it must state:

I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and believe that it has been maintained and operated properly so as to

comply with treatment standards specified in 40 CFR 268.49 without impermissible dilution of the prohibited wastes. I am aware there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

* * * * *

(iv) For characteristic wastes that are subject to the treatment standards in § 268.40 (other than those expressed as a required method of treatment) that are reasonably expected to contain underlying hazardous constituents as defined in § 268.2(i); are treated on-site to remove the hazardous characteristic; and are then sent off-site for treatment of underlying hazardous constituents, the certification must state the following:

I certify under penalty of law that the waste has been treated in accordance with the requirements of 40 CFR 268.40 to remove the hazardous characteristic. This decharacterized waste contains underlying hazardous constituents that require further treatment to meet universal treatment standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

(v) For characteristic wastes that contain underlying hazardous constituents as defined § 268.2(i) that are treated on-site to remove the hazardous characteristic to treat underlying hazardous constituents to levels in § 268.48 Universal Treatment Standards, the certification must state the following:

I certify under penalty of law that the waste has been treated in accordance with the requirements of 40 CFR 268.40 to remove the hazardous characteristic and that underlying hazardous constituents, as defined in § 268.2(i) have been treated on-site to meet the § 268.48 Universal Treatment Standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

(5) If the waste or treatment residue will be further managed at a different treatment, storage, or disposal facility, the treatment, storage, or disposal facility sending the waste or treatment residue off-site must comply with the notice and certification requirements applicable to generators under this section.

(6) Where the wastes are recyclable materials used in a manner constituting disposal subject to the provisions of § 268.20(b) regarding treatment standards and prohibition levels, the owner or operator of a treatment facility (i.e., the recycler) is not required to notify the receiving facility, pursuant to paragraph (b)(3) of this section. With each shipment of such wastes the owner or operator of the recycling facility must submit a certification described in paragraph (b)(4) of this section, and a notice which includes the information listed in paragraph (b)(3) of this section (except the manifest number) to the Regional Administrator, or his delegated representative. The recycling facility also must keep records of the name and location of each entity receiving the hazardous waste-derived product.

* * * * *

(e) Generators and treaters who first receive from EPA or an authorized state a determination that a given contaminated soil subject to LDRs as provided in § 268.49(a) no longer contains a listed hazardous waste and generators and treaters who first determine that a contaminated soil subject to LDRs as provided in § 268.49(a) no longer exhibits a characteristic of hazardous waste must:

(1) Prepare a one-time only documentation of these determinations including all supporting information; and,

(2) Maintain that information in the facility files and other records for a minimum of three years.

Subpart C—Prohibitions on Land Disposal

12. Section § 268.34 is revised to read as follows:

§ 268.34 Waste specific prohibitions—toxicity characteristic metal wastes.

(a) Effective August 24, 1998, the following wastes are prohibited from land disposal: the wastes specified in 40 CFR Part 261 as EPA Hazardous Waste numbers D004—D011 that are newly identified (i.e. wastes, soil, or debris identified as hazardous by the Toxic Characteristic Leaching Procedure but not the Extraction Procedure), and waste, soil, or debris from mineral processing operations that is identified as hazardous by the specifications at 40 CFR Part 261.

(b) Effective May 26, 2000, the following wastes are prohibited from land disposal: newly identified characteristic wastes from elemental phosphorus processing; radioactive wastes mixed with EPA Hazardous wastes D004—D011 that are newly identified (i.e. wastes, soil, or debris identified as hazardous by the Toxic Characteristic Leaching Procedure but not the Extraction Procedure); or mixed with newly identified characteristic mineral processing wastes, soil, or debris.

(c) Between May 26, 1998 and May 26, 2000, newly identified characteristic wastes from elemental phosphorus processing, radioactive waste mixed with D004—D011 wastes that are newly identified (i.e. wastes, soil, or debris identified as hazardous by the Toxic Characteristic Leaching Procedure but not the Extraction Procedure), or mixed with newly identified characteristic mineral processing wastes, soil, or debris may be disposed in a landfill or surface impoundment only if such unit is in compliance with the requirements specified in § 268.5(h)(2) of this part.

(d) The requirements of paragraphs (a) and (b) of this section do not apply if:

(1) The wastes meet the applicable treatment standards specified in subpart D of this part;

(2) Persons have been granted an exemption from a prohibition pursuant to a petition under § 268.6, with respect to those wastes and units covered by the petition;

(3) The wastes meet the applicable alternate treatment standards established pursuant to a petition granted under § 268.44; or

(4) Persons have been granted an extension to the effective date of a prohibition pursuant to § 268.5, with respect to these wastes covered by the extension.

(e) To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in § 268.40, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents (including underlying hazardous constituents in characteristic wastes) in excess of the applicable Universal Treatment Standard levels of § 268.48 of this part, the waste is prohibited from land disposal, and all requirements of part 268 are applicable, except as otherwise specified.

Subpart D—Treatment Standards

13. Section 268.40 is amended by revising paragraph (e), adding paragraph (h), and revising the Table of Treatment Standards to read as follows:

§ 268.40 Applicability of treatment standards.

* * * * *

(e) For characteristic wastes (D001—D043) that are subject to treatment standards in the following table "Treatment Standards for Hazardous Wastes," and are not managed in a wastewater treatment system that is regulated under the Clean Water Act (CWA), that is CWA-equivalent, or that is injected into a Class I nonhazardous

deep injection well, all underlying hazardous constituents (as defined in § 268.2(i)) must meet Universal Treatment Standards, found in § 268.48, Table Universal Treatment Standards, prior to land disposal as defined in § 268.2(c) of this part.

* * * * *

(h) Prohibited D004–D011 mixed radioactive wastes and mixed radioactive listed wastes containing metal constituents, that were previously treated by stabilization to the treatment standards in effect at that time and then put into storage, do not have to be re-treated to meet treatment standards in this section prior to land disposal.

	Reactive Cyanides Subcategory based on 261.23(a)(5).	Cyanides (Total)[7]	57-12-5	Reserved	590
		Cyanides (Amenable)[7]	57-12-5	0.86	30
D004 [8]	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for arsenic based on the toxicity characteristic leaching procedure (TCLP) in SW846.	Arsenic	7440-38-2	1.4 and meet §268.48 standards[6]	5.0 mg/l TCLP and meet §268.48 standards[6]
D005 [8]	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for barium based on the toxicity characteristic leaching procedure (TCLP) in SW846.	Barium	7440-39-3	1.2 and meet §268.48 standards[6]	21 mg/l TCLP and meet §268.48 standards[6]
D006 [8]	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for cadmium based on the toxicity characteristic leaching procedure (TCLP) in SW846.	Cadmium	7440-43-9	0.69 and meet §268.48 standards[6]	0.11 mg/l TCLP and meet §268.48 standards[6]
	Cadmium Containing Batteries Subcategory. (Note: This subcategory consists of nonwastewaters only.)	Cadmium	7440-43-9	NA	RTHRM

TREATMENT STANDARDS FOR HAZARDOUS WASTES NOTE: NA means not applicable					
WASTE CODE	WASTE DESCRIPTION AND TREATMENT/REGULATORY SUBCATEGORY[1]	REGULATED HAZARDOUS CONSTITUENT		WASTEWATERS	NONWASTEWATERS
		Common Name	CAS[2] Number	Concentration in mg/l[3]; or Technology Code[4]	Concentration in mg/kg[5] unless noted as "mg/l TCLP"; or Technology Code[4]
D007 [9]	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for chromium based on the toxicity characteristic leaching procedure (TCLP) in SW846.	Chromium (Total)	7440-47-3	2.77 and meet §268.48 standards[6]	0.60 mg/l TCLP and meet §268.48 standards[6]
D008 [9]	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for lead based on the toxicity characteristic leaching procedure (TCLP) in SW846.	Lead	7439-92-1	0.69 and meet §268.48 standards[6]	0.75 mg/l TCLP and meet §268.48 standards[6]
	Lead Acid Batteries Subcategory (Note: This standard only applies to lead acid batteries that are identified as RCRA hazardous wastes and that are not excluded elsewhere from regulation under the land disposal restrictions of 40 CFR 268 or exempted under other EPA regulations (see 40 CFR 266.80). This subcategory consists of nonwastewaters only.)	Lead	7439-92-1	NA	RLEAD
	Radioactive Lead Solids Subcategory (Note: these lead solids include, but are not limited to, all forms of lead shielding and other elemental forms of lead. These lead solids do not include treatment residuals such as hydroxide sludges, other wastewater treatment residuals, or incinerator ashes that can undergo conventional pozzolanic stabilization, nor do they include organo-lead materials that can be incinerated and stabilized as ash. This subcategory consists of nonwastewaters only.)	Lead	7439-92-1	NA	MACRO
D009 [9]	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain greater than or equal to 260 mg/kg total mercury that also contain organics and are not incinerator residues. (High Mercury-Organic Subcategory)	Mercury	7439-97-6	NA	IMERC; OR RMERC

TREATMENT STANDARDS FOR HAZARDOUS WASTES NOTE: NA means not applicable					
WASTE CODE	WASTE DESCRIPTION AND TREATMENT/REGULATORY SUBCATEGORY[1]	REGULATED HAZARDOUS CONSTITUENT		WASTEWATERS	NONWASTEWATERS
		Common Name	CAS[2] Number	Concentration in mg/l[3]; or Technology Code[4]	Concentration in mg/kg[5] unless noted as "mg/l TCLP"; or Technology Code[4]
	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain greater than or equal to 260 mg/kg total mercury that are inorganic, including incinerator residues and residues from RMERC. (High Mercury-Inorganic Subcategory)	Mercury	7439-97-6	NA	RMERC
	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain less than 260 mg/kg total mercury and that are residues from RMERC only. (Low Mercury Subcategory)	Mercury	7439-97-6	NA	0.20 mg/l TCLP and meet §268.48 standards[6]
	All other nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain less than 260 mg/kg total mercury and that are not residues from RMERC. (Low Mercury Subcategory)	Mercury	7439-97-6	NA	0.025 mg/l TCLP and meet §268.48 standards[6]
	All D009 wastewaters.	Mercury	7439-97-6	0.15 and meet §268.48 standards[6]	NA
	Elemental mercury contaminated with radioactive materials. (Note: This subcategory consists of nonwastewaters only.)	Mercury	7439-97-6	NA	AMLGM
	Hydraulic oil contaminated with Mercury Radioactive Materials Subcategory. (Note: This subcategory consists of nonwastewaters only.)	Mercury	7439-97-6	NA	IMERC

TREATMENT STANDARDS FOR HAZARDOUS WASTES NOTE: NA means not applicable					
WASTE CODE	WASTE DESCRIPTION AND TREATMENT/REGULATORY SUBCATEGORY[1]	REGULATED HAZARDOUS CONSTITUENT		WASTEWATERS	NONWASTEWATERS
		Common Name	CAS[2] Number	Concentration in mg/l[3]; or Technology Code[4]	Concentration in mg/kg[5] unless noted as "mg/l TCLP"; or Technology Code[4]
D010 [9]	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for selenium based on the toxicity characteristic leaching procedure (TCLP) in SW846.	Selenium	7782-49-2	0.82 and meet §268.48 standards[6]	5.7 mg/l TCLP and meet §268.48 standards[6]
D011 [9]	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for silver based on the toxicity characteristic leaching procedure (TCLP) in SW846.	Silver	7440-22-4	0.43 and meet §268.48 standards[6]	0.14 mg/l TCLP and meet §268.48 standards[6]
D012 [9]	Wastes that are TC for Endrin based on the TCLP in SW846 Method 1311.	Endrin	72-20-8	BIODG; or CMBST	0.13 and meet §268.48 standards[6]
		Endrin aldehyde	7421-93-4	BIODG; or CMBST	0.13 and meet §268.48 standards[6]
D013 [9]	Wastes that are TC for Lindane based on the TCLP in SW846 Method 1311.	alpha-BHC	319-84-6	CARBN; or CMBST	0.066 and meet §268.48 standards[6]
		beta-BHC	319-85-7	CARBN; or CMBST	0.066 and meet §268.48 standards[6]
		delta-BHC	319-86-8	CARBN; or CMBST	0.066 and meet §268.48 standards[6]
		gamma-BHC (Lindane)	58-89-9	CARBN; or CMBST	0.066 and meet §268.48 standards[6]

D014 [9]	Wastes that are TC for Methoxychlor based on the TCLP in SW846 Method 1311.	Methoxychlor	72-43-5	WETOX or CMBST	0.18 and meet §268.48 standards[6]
D015 [9]	Wastes that are TC for Toxaphene based on the TCLP in SW846 Method 1311.	Toxaphene	8001-35-2	BIODG or CMBST	2.6 and meet §268.48 standards[6]
D016 [9]	Wastes that are TC for 2,4-D (2,4-Dichlorophenoxyacetic acid) based on the TCLP in SW846 Method 1311.	2,4-D (2,4-Dichlorophenoxyacetic acid)	94-75-7	CHOXD, BIODG, or CMBST	10 and meet §268.48 standards[6]
D017 [9]	Wastes that are TC for 2,4,5-TP (Silvex) based on the TCLP in SW846 Method 1311.	2,4,5-TP (Silvex)	93-72-1	CHOXD or CMBST	7.9 and meet §268.48 standards[6]
D018 [9]	Wastes that are TC for Benzene based on the TCLP in SW846 Method 1311.	Benzene	71-43-2	0.14 and meet §268.48 standards[6]	10 and meet §268.48 standards[6]
D019 [9]	Wastes that are TC for Carbon tetrachloride based on the TCLP in SW846 Method 1311.	Carbon tetrachloride	56-23-5	0.057 and meet §268.48 standards[6]	6.0 and meet §268.48 standards[6]
D020 [9]	Wastes that are TC for Chlordane based on the TCLP in SW846 Method 1311.	Chlordane (alpha and gamma isomers)	57-74-9	0.0033 and meet §268.48 standards[6]	0.26 and meet §268.48 standards[6]
D021 [9]	Wastes that are TC for Chlorobenzene based on the TCLP in SW846 Method 1311.	Chlorobenzene	108-90-7	0.057 and meet §268.48 standards[6]	6.0 and meet §268.48 standards[6]
D022 [9]	Wastes that are TC for Chloroform based on the TCLP in SW846 Method 1311.	Chloroform	67-66-3	0.046 and meet §268.48 standards[6]	6.0 and meet §268.48 standards[6]

		Common Name	CAS[2] Number	Concentration in mg/l[3]; or Technology Code[4]	Concentration in mg/kg[5] unless noted as "mg/l TCLP"; or Technology Code[4]
D023 [9]	Wastes that are TC for o-Cresol based on the TCLP in SW846 Method 1311.	o-Cresol	95-48-7	0.11 and meet §268.48 standards[6]	5.6 and meet §268.48 standards[6]
D024 [9]	Wastes that are TC for m-Cresol based on the TCLP in SW846 Method 1311.	m-Cresol (difficult to distinguish from p-cresol)	108-39-4	0.77 and meet §268.48 standards[6]	5.6 and meet §268.48 standards[6]
D025 [9]	Wastes that are TC for p-Cresol based on the TCLP in SW846 Method 1311.	p-Cresol (difficult to distinguish from m-cresol)	106-44-5	0.77 and meet §268.48 standards[6]	5.6 and meet §268.48 standards[6]
D026 [9]	Wastes that are TC for Cresols (Total) based on the TCLP in SW846 Method 1311.	Cresol-mixed isomers (Cresylic acid)(sum of o-, m-, and p-cresol concentrations)	1319-77-3	0.88 and meet §268.48 standards[6]	11.2 and meet §268.48 standards[6]
D027 [9]	Wastes that are TC for p-Dichlorobenzene based on the TCLP in SW846 Method 1311.	p-Dichlorobenzene (1,4-Dichlorobenzene)	106-46-7	0.090 and meet §268.48 standards[6]	6.0 and meet §268.48 standards[6]
D028 [9]	Wastes that are TC for 1,2-Dichloroethane based on the TCLP in SW846 Method 1311.	1,2-Dichloroethane	107-06-2	0.21 and meet §268.48 standards[6]	6.0 and meet §268.48 standards[6]
D029 [9]	Wastes that are TC for 1,1-Dichloroethylene based on the TCLP in SW846 Method 1311.	1,1-Dichloroethylene	75-35-4	0.025 and meet §268.48 standards[6]	6.0 and meet §268.48 standards[6]
D030 [9]	Wastes that are TC for 2,4-Dinitrotoluene based on the TCLP in SW846 Method 1311.	2,4-Dinitrotoluene	121-14-2	0.32 and meet §268.48 standards[6]	140 and meet §268.48 standards[6]
D031 [9]	Wastes that are TC for Heptachlor based on the TCLP in SW846 Method 1311.	Heptachlor	76-44-8	0.0012 and meet §268.48 standards[6]	0.066 and meet §268.48 standards[6]

Footnotes to Treatment Standard Table 268.40

[1] The waste descriptions provided in this table do not replace waste descriptions in 40 CFR 261. Descriptions of Treatment/Regulatory Subcategories are provided, as needed, to distinguish between applicability of different standards.

[2] CAS means Chemical Abstract Services. When the waste code and/or regulated constituents are described as a combination of a chemical with its salts and/or esters, the CAS number is given for the parent compound only.

[3] Concentration standards for wastewaters are expressed in mg/l and are based on analysis of composite samples.

[4] All treatment standards expressed as a Technology Code or combination of Technology Codes are explained in detail in 40 CFR 268.42 Table 1—Technology Codes and Descriptions of Technology-Based Standards.

[5] Except for Metals (EP or TCLP) and Cyanides (Total and Amenable) the nonwastewater treatment standards expressed as a concentration were established, in part, based upon incineration in units operated in accordance with the technical requirements of 40 CFR Part 264 Subpart O or Part 265 Subpart O, or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in 40 CFR 268.40(d). All concentration standards for nonwastewaters are based on analysis of grab samples.

[6] Where an alternate treatment standard or set of alternate standards has been indicated, a facility may comply with this alternate standard, but only for the Treatment/Regulatory Subcategory or physical form (i.e., wastewater and/or nonwastewater) specified for that alternate standard.

[7] Both Cyanides (Total) and Cyanides (Amenable) for nonwastewaters are to be analyzed using Method 9010 or 9012, found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW–846, as incorporated by reference in 40 CFR 260.11, with a sample size of 10 grams and a distillation time of one hour and 15 minutes.

[8] These wastes, when rendered nonhazardous and then subsequently managed in CWA, or CWA-equivalent systems, are not subject to treatment standards. (See § 268.1(c) (3) and (4)).

[9] These wastes, when rendered nonhazardous and then subsequently injected in a Class I SDWA well, are not subject to treatment standards. (See § 148.1(d)).

[10] Between August 26, 1996, and August 26, 1997, the treatment standard for this waste may be satisfied by either meeting the constituent concentrations in this table or by treating the waste by the specified technologies: combustion, as defined by the technology code CMBST at § 268.42 Table 1 of this Part, for nonwastewaters; and, biodegradation as definded by the technology code BIODG, carbon adsorption as defined by the technology code CARBN, chemical oxidation as defined by the technology code CHOXD, or combustion as defined as technology code CMBST at § 268.42 Table 1 of this Part, for wastewaters.

[11] For these wastes, the definition of CMBST is limited to: (1) combustion units operating under 40 CFR 266, (2) combustion units permitted under 40 CFR Part 264, Subpart O, or (3) combustion units operating under 40 CFR 265, Subpart O, which have obtained a determination of equivalent treatment under 268.42 (b).

14. Section 268.42 is amended by revising the introductory text of paragraph (a) and removing paragraphs (a)(1), (a)(2), and (a)(3) to read as follows:

§ 268.42 Treatment standards expressed as specified technologies.

(a) The following wastes in the table in § 268.40 "Treatment Standards for Hazardous Wastes," for which standards are expressed as a treatment method rather than a concentration level, must be treated using the technology or technologies specified in the table entitled "Technology Codes and Description of Technology-Based Standards" in this section.

* * * * *

15. Section 268.44 is amended by redesignating paragraph (h)(3) as (h)(5), and adding new paragraphs (h) (3) and (4) to read as follows:

§ 268.44 Variance from a treatment standard.

* * * * *

(h) * * *

(3) For contaminated soil only, treatment to the level or by the method specified in the soil treatment standards would result in concentrations of hazardous constituents that are below (i.e., lower than) the concentrations necessary to minimize short- and long-term threats to human health and the environment. Treatment variances approved under this paragraph must:

(i) At a minimum, impose alternative land disposal restriction treatment standards that, using a reasonable maximum exposure scenario:

(A) For carcinogens, achieve constituent concentrations that result in the total excess risk to an individual exposed over a lifetime generally falling within a range from 10^{-4} to 10^{-6}; and

(B) For constituents with non-carcinogenic effects, achieve constituent concentrations that an individual could be exposed to on a daily basis without appreciable risk of deleterious effect during a lifetime.

(ii) Not consider post-land-disposal controls.

(4) For contaminated soil only, treatment to the level or by the method specified in the soil treatment standards would result in concentrations of hazardous constituents that are below (i.e., lower than) natural background concentrations at the site where the contaminated soil will land disposed.

* * * * *

16. Section 268.45 is amended by revising the introductory text of paragraph (a), and paragraphs (d)(3) and (d)(4) to read as follows:

§ 268.45 Treatment standards for hazardous debris.

(a) Treatment standards. Hazardous debris must be treated prior to land disposal as follows unless EPA determines under § 261.3(f)(2) of this chapter that the debris is no longer contaminated with hazardous waste or the debris is treated to the waste-specific treatment standard provided in this subpart for the waste contaminating the debris:

* * * * *

(d) * * *

(3) Cyanide-reactive debris. Residue from the treatment of debris that is reactive because of cyanide must meet the treatment standards for D003 in "Treatment Standards for Hazardous Wastes" at § 268.40.

(4) Ignitable nonwastewater residue. Ignitable nonwastewater residue containing equal to or greater than 10% total organic carbon is subject to the technology specified in the treatment standard for D001: Ignitable Liquids.

* * * * *

17. Section 268.48 is amended by revising the table Universal Treatment Standards to read as follows:

§ 268.48 Universal treatment standards.

(a) * * *

FOOTNOTES TO TABLE UTS

1 CAS means Chemical Abstract Services. When the waste code and/or regulated constituents are described as a combination of a chemical with it's salts and/or esters, the CAS number is given for the parent compound only.44

2 Concentration standards for wastewaters are expressed in mg/l and are based on analysis of composite samples.

3 Except for Metals (EP or TCLP) and Cyanides (Total and Amenable) the nonwastewater treatment standards expressed as a concentration were established, in part, based upon incineration in units operated in accordance with the technical requirements of 40 CFR part 264, subpart O or 40 CFR part 265, subpart O, or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in 40 CFR 268.40(d). All concentration standards for nonwastewaters are based on analysis of grab samples.

4 Both Cyanides (Total) and Cyanides (Amenable) for nonwastewaters are to be analyzed using Method 9010 or 9012, found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, with a sample size of 10 grams and a distillation time of one hour and 15 minutes.

5 These constituents are not "underlying hazardous constituents" in characteristic wastes, according to the definition at §268.2(i).

6 Between August 26, 1996, and August 26, 1997, these constituents are not "underlying hazardous constituents" as defined at §268.2(i) of this part.

7 This constituent is not an underlying hazardous constituent as defined at §268.2(i) of this part because its UTS level is greater than its TC level, thus a treated selenium waste would always be characteristically hazardous, unless it is treated to below its characteristic level.

BILLING CODE 6560–50–C

18. Subpart D is amended by adding § 268.49 to read as follows:

§ 268.49 Alternative LDR treatment standards for contaminated soil.

(a) Applicability. You must comply with LDRs prior to placing soil that exhibits a characteristic of hazardous waste, or exhibited a characteristic of hazardous waste at the time it was generated, into a land disposal unit. The following chart describes whether you must comply with LDRs prior to placing soil contaminated by listed hazardous waste into a land disposal unit:

If LDRs	And if LDRs	And if	Then you
Applied to the listed waste when it contaminated the soil*.	Apply to the listed waste now		Must comply with LDRs
Didn't apply to the listed waste when it contaminated the soil*.	Apply to the listed waste now	The soil is determined to contain the listed waste when the soil is first generated.	Must comply with LDRs.
Didn't apply to the listed waste when it contaminated the soil*.	Apply to the listed waste now	The soil is determined not to contain the listed waste when the soil is first generated.	Needn't comply with LDRs.
Didn't apply to the listed waste when it contaminated the soil*.	Don't apply to the listed waste now		Needn't comply with LDRs.

* For dates of LDR applicability, see 40 CFR Part 268 Appendix VII. To determine the date any given listed hazardous waste contaminated any given volume of soil, use the last date any given listed hazardous waste was placed into any given land disposal unit or, in the case of an accidental spill, the date of the spill.

(b) Prior to land disposal, contaminated soil identified by paragraph (a) of this section as needing to comply with LDRs must be treated according to the applicable treatment standards specified in paragraph (c) of this section or according to the Universal Treatment Standards specified in 40 CFR 268.48 applicable to the contaminating listed hazardous waste and/or the applicable characteristic of hazardous waste if the soil is characteristic. The treatment standards specified in paragraph (c) of this section and the Universal Treatment Standards may be modified through a treatment variance approved in accordance with 40 CFR 268.44.

(c) Treatment standards for contaminated soils. Prior to land disposal, contaminated soil identified by paragraph (a) of this section as needing to comply with LDRs must be treated according to all the standards specified in this paragraph or according to the Universal Treatment Standards specified in 40 CFR 268.48.

(1) All soils. Prior to land disposal, all constituents subject to treatment must be treated as follows:

(A) For non-metals, treatment must achieve 90 percent reduction in total constituent concentrations, except as provided by paragraph (c)(1)(C) of this section.

(B) For metals, treatment must achieve 90 percent reduction in constituent concentrations as measured in leachate from the treated media (tested according to the TCLP) or 90 percent reduction in total constituent concentrations (when a metal removal treatment technology is used), except as provided by paragraph (c)(1)(C) of this section.

(C) When treatment of any constituent subject to treatment to a 90 percent reduction standard would result in a concentration less than 10 times the Universal Treatment Standard for that constituent, treatment to achieve constituent concentrations less than 10 times the universal treatment standard is not required. Universal Treatment Standards are identified in 40 CFR 268.48 Table UTS.

(2) Soils that exhibit the characteristic of ignitability, corrosivity or reactivity. In addition to the treatment required by paragraph (c)(1) of this section, prior to land disposal, soils that exhibit the characteristic of ignitability, corrosivity, or reactivity must be treated to eliminate these characteristics.

(3) Soils that contain nonanalyzable constituents. In addition to the treatment requirements of paragraphs (c)(1) and (2) of this section, prior to land disposal, the following treatment is required for soils that contain nonanalyzable constituents:

(A) For soil that also contains analyzable constituents, treatment of those analyzable constituents to the levels specified in paragraphs (c)(1) and (2) of this section; or,

(B) For soil that contains only nonanalyzable constituents, treatment by the method specified in § 268.42 for the waste contained in the soil.

(d) Constituents subject to treatment. When applying the soil treatment standards in paragraph (c) of this section, constituents subject to treatment are any constituents listed in 40 CFR 268.48, Table UTS—Universal Treatment Standards that are reasonably expected to be present in any given volume of contaminated soil, except fluoride, selenium, sulfides, vanadium and zinc, and are present at concentrations greater than ten times the universal treatment standard.

(e) Management of treatment residuals. Treatment residuals from treating contaminated soil identified by paragraph (a) of this section as needing to comply with LDRs must be managed as follows:

(1) Soil residuals are subject to the treatment standards of this section;

(2) Non-soil residuals are subject to:

(A) For soils contaminated by listed hazardous waste, the RCRA Subtitle C standards applicable to the listed hazardous waste; and

(B) For soils that exhibit a characteristic of hazardous waste, if the non-soil residual also exhibits a characteristic of hazardous waste, the treatment standards applicable to the characteristic hazardous waste.

19. Table 1 in Appendix VII to Part 268 is amended by removing the entries for waste code F033; revising the second entry for waste code F032, the second entry for F034, and the first entry for K088; revising the entries for D003-D011 and two entries for waste code F035; and, Table 2 is amended by revising entry number 9 and adding entries 12 and 13 to read as follows:

VOL 63 ISS 100 MAY 26 1998 UMI

TABLE 1.—EFFECTIVE DATES OF SURFACE DISPOSED WASTES
[(Non-soil and Debris) Regulated in the LDRS[A]—Comprehensive List]

Waste code	Waste category	Effective date
•	•	•
D003	Newly identified surface-disposed elemental phosphorus processing wastes	May 26, 2000.
D004	Newly identified D004 and mineral processing wastes	August 24, 1998.
D004	Mixed radioactive/newly identified D004 or mineral processing wastes	May 26, 2000.
D005	Newly identified D005 and mineral processing wastes	August 24, 1998.
D005	Mixed radioactive/newly identified D005 or mineral processing wastes	May 26, 2000.
D006	Newly identified D006 and mineral processing wastes	August 24, 1998.
D006	Mixed radioactive/newly identified D006 or mineral processing wastes	May 26, 2000.

Part III

Department of Education

Regional Resource and Federal Center Program; Notice

DEPARTMENT OF EDUCATION

Regional Resource and Federal Center Programs

AGENCY: Department of Education.

ACTION: Notice of waiver and additional activities.

SUMMARY: The Secretary waives the requirements in EDGAR at 34 CFR 75.261 as applied to the currently-funded Regional Resource Centers to require the Centers to carry out certain additional activities. Section 75.261 sets forth the conditions for extending a project period, including the general prohibition against extending projects that involve the obligation of additional Federal funds. The Secretary will issue continuation awards to the Regional Resource Center Programs in order to ensure the most efficient use of Federal funds.

EFFECTIVE DATE: This waiver takes effect on June 25, 1998.

FOR FURTHER INFORMATION CONTACT: Debra Sturdivant, Telephone: (202) 205–8038, or Marie Roane, Telephone: (202) 205–8451. Individuals who use a telecommunications device for the deaf may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 A.M. and 8:00 P.M. Eastern Standard Time, Monday through Friday.

Individuals with disabilities may obtain this document in an alternate format (e.g., Braille, large print, audiotape, or computer diskette) on request to the contact person listed in the preceding paragraph.

SUPPLEMENTARY INFORMATION: On December 10, 1992 (57 FR 58474), the Department issued a Notice Inviting Applications for New Awards under the Regional Resource Center Program for Fiscal Year 1992. In this notice the Department announced that it would make six awards of up to 60 months under 34 CFR 75.105(c)(3) and the Individuals with Disabilities Education Act (IDEA), which directed the Secretary to support the establishment of Regional Centers that provide consultation, technical assistance and training to State educational agencies and, through those State educational agencies, to local educational agencies and to other appropriate public agencies providing special education and related services and early intervention services.

The grant period for the six centers ends May 31, 1998. In order to carry out activities relating to implementation of the IDEA Amendments of 1997 as stated by the Senate Appropriations Committee in its report accompanying the Department's fiscal year 1998 appropriations act, it is necessary to issue continuation awards to the existing grantees. Specifically, the Senate report states that the Secretary should provide training and disseminate information to State and local administrators, teachers, related services personnel, parents of children with disabilities, and other appropriate parties on the implementation of the 1997 amendments.

The Department is utilizing a number of strategies to carry out this directive. Because the Regional Resource Centers (RRCs) have a primary role in assisting States in implementing the IDEA Amendments of 1997, these organizations are well-positioned to play a key part in this training and information effort. In particular, the Secretary plans for the RRCs to conduct a series of regional institutes for educational excellence. The purposes of the regional institutes are:

(1) To ensure that State education agency personnel, local school personnel and parents receive high-quality, accurate training on the IDEA Amendments of 1997 in order to improve results for students with disabilities through improved teaching and learning;

(2) To build field support as part of the implementation of the IDEA Amendments of 1997 that is community-based and grounded in the context of improving schooling and results for children; and

(3) To ensure the involvement of State education agencies, local school personnel, parents, Office of Special Education and Rehabilitative Services (OSERS)—supported technical assistance and dissemination services, State technical assistance providers, and topical research centers in the development of strategies and models to implement the IDEA Amendments of 1997.

Because the regional institutes would be held during the summer of 1998, the project period for the current Regional Resource Centers must be extended to enable the RRCs to both plan and conduct the institutes. The Secretary believes that it is essential that the RRCs conduct the institutes given the RRCs technical assistance expertise and experience in carrying out similar activities.

Based on the foregoing, the Secretary believes that it makes the most programmatic sense and is the most efficient use of Federal funds to issue continuation awards. However, to do so, the Department must waive the requirements in EDGAR at 34 CFR 75.261 as well as provide for the new activities stated in this notice. That provision includes a prohibition against project period extensions that involve the obligation of additional Federal funds.

Reasons

There is an immediate need to provide training and information to the populations that will be targeted by the regional institutes. Waiting until after a new RRC competition to hold the institutes would severely hinder the Department's efforts to address the critical needs that are now present in the regions. The current RRCs have already conducted extensive training and information activities related to State implementation of the Amendments and are best suited to conduct the regional institutes.

Therefore, the Department will issue continuation awards to the current grantees for four (4) months.

Public Comment

On March 26, 1998, the Secretary published a notice of proposed waiver for the current RRCs in the **Federal Register** (63 FR 14790). In the notice of proposed waiver the Secretary invited public comments. The Secretary did not receive any comments.

Waiver

The Secretary waives the application of 34 CFR 75.261 to the RRCs authorized under Part C of the Individuals with Disabilities Education Act. Thus, the Department will issue four (4) month continuation awards to the current grantees consistent with the standards for continuation in 34 CFR 75.253.

Intergovernmental Review

This program is subject to the requirements of Executive Order 12372 and the regulations in 34 CFR part 79. The objective of the Executive order is to foster an intergovernmental partnership and a strengthened federalism by relying on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

In accordance with the order, this document is intended to provide early notification of the Department's specific plans and actions for this program.

Electronic Access to This Document

Anyone may view this document, as well as all other Department of Education documents published in the **Federal Register**, in text or portable document format (pdf) on the World Wide Web at either of the following sites:

http://ocfo.ed.gov/fedreg.htm

http://www.ed.gov/news.html

To use the pdf you must have the Adobe Acrobat Reader Program with Search, which is available free at either of the preceding sites. If you have questions about using the pdf, call the U.S. Government Printing Office toll free at 1–888–293–6498.

Anyone may also view these documents in text copy only on an electronic bulletin board of the Department. Telephone: (202) 219–1511 or, toll free, 1–800–222–4922. The documents are located under Option G—Files/Announcements, Bulletins and Press Releases.

Note: The official version of this document is the document published in the **Federal Register**.

Dated: May 19, 1998.

Judith E. Heumann,

Assistant Secretary for Special Education and Rehabilitative Services.

(Catalog of Federal Domestic Assistance Number 84.028, Technical Assistance and Dissemination to Improve Services and Results for Children with Disabilities)

Part IV

Federal Emergency Management Agency

Compendium of Flood Map Changes; Notice

FEDERAL EMERGENCY MANAGEMENT AGENCY

Compendium of Flood Map Changes

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Notice.

SUMMARY: This Notice provides listings of changes made to National Flood Insurance Program (NFIP) maps produced by FEMA effective during the last 6 months of 1997.

DATES: The listings include changes to NFIP maps that became effective July 1, 1997, through December 31, 1997.

FOR FURTHER INFORMATION CONTACT: Michael K. Buckley, P.E., Director, Technical Services Division, Mitigation Directorate, Federal Emergency Management Agency, Washington, DC 20472, (202)646-2756.

SUPPLEMENTARY INFORMATION: In accordance with Section 1360(i) of the National Flood Insurance Reform Act of 1994, this Notice is provided to inform interested parties of changes made by FEMA to NFIP maps. The two listings provided show communities affected by map changes made by letter and communities affected by physical map changes. For each Letter of Map Change, the first listing provides the map panel(s) affected, effective (determination) date of the change, case number, and determination type. For each physical map change, the Map Revision listing provides the map panel(s) affected and the effective date of the change. The listing also identifies: (1) those panels on which the Special Flood Hazard Areas have not been changed or have been changed only to incorporate the Letters of Map Change issued before the effective date; and (2) those panels for which a Flood Insurance Rate Map is produced for the first time, resulting only in changes to flood insurance and floodplain management requirements in the affected community. Future notices of changes to NFIP maps will be published approximately every 6 months.

Dated: April 30, 1998

Michael J. Armstrong,

Associate Director for Mitigation.

Two listings are provided below. The first listing includes all Letters of Map Change issued by FEMA from July 1 through December 31, 1997. The following types of letters are included in the listing:

Type	Description
01	Letter of Map Revision Based on Fill (218-65)
02	Letter of Map Amendment (218-70)
05	Letter of Map Revision With Base Flood Elevation Changes
06	Letter of Map Revision Without Base Flood Elevation Changes
08	Denial
12	Floodway Revision
17	Letter of Map Revision-inadvertent inclusion in floodway (218-65)
18	Letter of Map Revision-inadvertent inclusion in V zone (218-65)
19	Letter of Map Change Revalidation.

The second listing includes map panels that FEMA physically revised and republished from July 1 through December 31, 1997. For those map panels on which the Special Flood Hazard Areas have not been changed or have been changed only to incorporate Letters of Map Change issued before the effective date, two asterisks(**) are shown to the right of the map panel number. For those map panels for which a Flood Insurance Rate Map is produced for the first time, resulting only in changes to flood insurance and floodplain management requirements in the affected community, three asterisks(***) are shown to the right of the map panel number.
